CLASS 6 — SCIENCE · FORMULA SHEET

Chapter 1: **The Wonderful World of Science** | Quick revision, one page

Steps of the scientific method

- Observe and ask a question.
- Make a hypothesis (a testable guess).
- Do an experiment and keep everything same except one thing.
- Record the results carefully.
- Draw a conclusion; repeat to be sure.

Key words

- Curiosity: the urge to ask why and how.
- Observation: looking carefully with our senses.
- Hypothesis: a guess that can be tested.
- Experiment: a test done to check a hypothesis.
- Conclusion: what the results tell us.

Branches of science

- Botany: plants. Zoology: animals.
- Astronomy: stars, planets and space.
- Physics: matter, energy, motion. Chemistry: substances and their changes.

Tools and good habits

- Microscope: tiny things. Telescope: faraway things.
- Be honest, record exactly what you see.
- Do not accept any claim without checking it.
- Science grows: new findings can improve old ideas.
