CLASS 6 — SCIENCE · FORMULA SHEET

Chapter 2: **Diversity in the Living World** | Quick revision, one page

Habitat and adaptation

- Habitat: the place where an organism lives.
- Biodiversity: the variety of living things on Earth.
- Adaptation: a feature that helps an organism live in its habitat.
- Land habitats: forests, deserts, mountains. Water habitats: ponds, rivers, seas.

Groups of plants by stem

- Herb: small, soft green stem (spinach, tulsi).
- Shrub: bushy, hard stem branching near the base (rose, hibiscus).
- Tree: tall, thick woody trunk (mango, neem).
- Creeper: weak stem spreads on the ground (pumpkin).
- Climber: climbs a support (grapevine, pea).

Roots and leaves

- Tap root: one main root with branches (carrot, mustard).
- Fibrous root: many thin roots of similar size (wheat, grass).
- Venation: pattern of veins in a leaf.
- Parallel venation: veins run side by side (grass, wheat).
- Reticulate venation: net-like veins (mango, mustard).

Adaptations of animals

- Camel: padded feet, stores fat in hump, survives with little water.
- Fish: streamlined body, fins to swim, gills to breathe in water.
