CLASS 6 — SCIENCE · FORMULA SHEET

Chapter 7: **Temperature and its Measurement** | Quick revision, one page

Temperature

- Temperature tells how hot or cold an object is.
- It is measured with a thermometer.
- Unit used in daily life: degree Celsius (degrees C).
- Touch is not reliable for judging temperature.

Fixed values

- Water freezes (ice melts) at 0 degrees C.
- Water boils at 100 degrees C.
- Normal human body temperature: about 37 degrees C.

Thermometers

- Clinical thermometer: body temperature; range about 35 to 42 degrees C; has a kink; shake it down before use.
- Laboratory thermometer: range about -10 to 110 degrees C; for liquids and other things.
- Mercury or alcohol inside a thin glass tube expands when heated.

Heat flow and materials

- Heat flows from a hotter object to a colder one.
- Conductors let heat pass easily (iron, copper).
- Insulators do not (wood, plastic).
- Keep the bulb in the liquid, not touching the walls; read at eye level.
