CLASS 6 — SCIENCE · FORMULA SHEET

Chapter 11: **Nature's Treasures** | Quick revision, one page

Natural resources

- Natural resources: air, water, soil, sunlight, minerals, plants.
- Renewable: can be replaced quickly (sunlight, wind, water).
- Non-renewable: get used up (coal, petroleum, natural gas).

Air

- Air is a mixture of gases.
- Nitrogen about 78 per cent; oxygen about 21 per cent; small amounts of carbon dioxide and others.
- Oxygen: needed for respiration and burning.
- Plants use carbon dioxide to make food.
- Moving air is wind.

Soil

- Formed by the breaking down of rocks over a long time.
- Humus: decayed plant and animal matter that makes soil fertile.
- Topsoil is the top layer.
- Loamy soil: sand, silt, clay and humus; best for crops.
- Soil erosion: washing away of topsoil by water or wind.

Fossil fuels and care

- Coal, petroleum and natural gas are fossil fuels.
- Save fuel, plant trees, save water, do not pollute air.
