CLASS 6 — SCIENCE · FORMULA SHEET

Chapter 12: **Beyond Earth** | Quick revision, one page

Celestial bodies

- Celestial bodies: Sun, Moon, stars, planets, comets, asteroids.
- Stars make their own light and heat (the Sun is a star).
- The Moon reflects sunlight; planets also shine by reflected light.

Solar system

- Eight planets go around the Sun: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.
- Mercury is nearest to the Sun; Neptune is farthest.
- Earth is the only planet known to have life.

Stars and constellations

- Constellation: a group of stars forming a pattern (Ursa Major or Saptarishi).
- Pole star: appears almost fixed in the northern sky; shows north.
- Stars twinkle because their light passes through moving air.

Moon and space missions

- The Moon goes around the Earth in about a month.
- Phases of the Moon: different shapes of the lit part seen from Earth; new moon to full moon.
- Artificial satellites: man-made, used for weather, communication and navigation.
- Aryabhata: first Indian satellite (1975). Chandrayaan: Moon. Mangalyaan: Mars.
