SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Observe things (1); Ask a question (1); Guess the answer (hypothesis) (1); Test it by experiment (1); Conclude from results (1).	1+1+1+1+1

Mistakes to avoid:

- Calling a guess a **conclusion**: the guess before the experiment is a hypothesis; the conclusion comes after the results.
- Changing many things in an experiment at once; only **one** condition should be changed.
- Writing only what you expected to see instead of what you actually observed.
- Believing that one trial is enough; experiments are repeated to be sure.
- Mixing up the instruments: microscope is for tiny things, telescope is for faraway things.
- Saying science facts never change; new evidence can improve our understanding.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
