Mistakes to avoid:

- Calling frosted glass or tracing paper transparent; they are **translucent**.
- Saying that insoluble means the substance cannot mix with anything; it means it does not dissolve in **water**.
- Writing that all metals are hard; sodium is soft, and only most metals are hard.
- Confusing **opaque** with translucent: opaque blocks all light.
- Thinking oil is soluble because it spreads on water; it floats as a separate layer.
- Assuming all shiny objects are metals; lustre alone is not proof, check conduction too.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
