	OR: Absorb heat (1); Melt (1); Form water (1); Water evaporates later (1); Plate becomes dry (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing evaporation with **boiling**: evaporation happens at any temperature from the surface, boiling at about 100 degrees C.
- Mixing condensation (vapour to liquid) with evaporation (liquid to vapour).
- Calling the white cloud over a boiling kettle water vapour; vapour is invisible, the white cloud is tiny droplets.
- Saying that drops on a cold glass come from inside the glass; they come from **vapour in the air**.
- Writing that humid air helps drying; more moisture in the air makes evaporation slower.
- Forgetting that ice melts and water freezes at the same temperature, 0 degrees C.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
