THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 6 — SCIENCE · HARD LEVEL CHAPTER TEST SET 3

Chapter 8: **A Journey through States of Water** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Which action reduces runoff and raises groundwater? 1

(a) building percolation pits **(b)** paving all roads
(c) draining wetlands **(d)** cutting forests

2. Why do mountain regions with snow supply river water in summer? 1

(a) snow freezes **(b)** snow evaporates **(c)** snow condenses **(d)** snow melts

3. In a solar still, the salty water evaporates and fresh water collects after: 1

(a) melting **(b)** filtration **(c)** freezing **(d)** condensation

4. What would happen to the water cycle if the Sun's heat decreased? 1

(a) more floods **(b)** no change
(c) more rain **(d)** less evaporation and rain

5. Which of the following is not a part of the water cycle? 1

(a) precipitation **(b)** condensation **(c)** evaporation **(d)** burning of wood

6. An unglazed earthen pot keeps water cool because: 1

(a) evaporation from pores takes away heat **(b)** wind
(c) clay is cold **(d)** water is cold

7. When water freezes into ice, its volume: 1

(a) increases **(b)** stays the same **(c)** becomes zero **(d)** decreases

8. A bottle of water kept in a freezer for a long time cracks because: 1

(a) ice occupies more volume than water **(b)** water is hot
(c) ice is heavy **(d)** the bottle melts

9. **Assertion (A):** Clouds are formed from tiny water droplets. 1
Reason (R): Water vapour rises, cools and condenses in the atmosphere.
Choose the correct option:

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

10. **Assertion (A):** Ice melts at 0 degrees C. 1
Reason (R): Water freezes at 0 degrees C.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why are glaciers called water reserves? 2

12. Why is fog common in winter mornings? 2

13. Why must dams be built carefully? 2

14. Why does a swimmer feel cold when coming out of a pool? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Explain how the clouds are carried by wind and how this affects rain at distant places. 3

16. Why does boiling milk overflow while water does not as easily? 3

17. Explain the difference between a flood and a heavy shower. 3

OR

Describe how salt can be obtained from sea water in salt pans. 3

18. A swimmer's skin feels cold after a swim. Explain with reference to the changes of state. 3

OR

Why is it advised to avoid watering plants at midday? 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** During summer in Delhi, water from ponds and rivers turns into vapour and rises. High in the sky it cools and forms clouds. When the droplets in the clouds grow big and heavy, they fall as rain. The rain water flows into rivers and the sea, and the process goes on again and again. 5
(i) What is the whole continuous process called?
(ii) Which process changes water to vapour?
(iii) What are clouds made of?
(iv) Mention two forms in which water can fall to the ground, and why the water cycle is important.

20. Explain with examples how the same water can exist in three states and move between them in daily life. 5

OR

Describe a school project to measure rainfall using a simple rain gauge and use the data. 5

END OF QUESTION PAPER — Total: 40 Marks
