THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 6 — SCIENCE · HARD LEVEL CHAPTER TEST SET 2

Chapter 10: **Living Creatures: Exploring their Characteristics** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. A calf grows into a cow. Its growth involves: 1

(a) absorption of sand **(b)** growth from within using food
(c) melting **(d)** addition of stones

2. Which organ in a plant takes in carbon dioxide for food making? 1

(a) root **(b)** seed **(c)** leaf **(d)** flower

3. In an experiment, germinating seeds in a closed flask make lime water milky. This shows: 1

(a) seeds absorb carbon dioxide **(b)** seeds release oxygen
(c) seeds release carbon dioxide **(d)** seeds are dead

4. Why do older leaves turn yellow and fall? 1

(a) they carry stored wastes and die **(b)** they fly
(c) they get bored **(d)** they shrink in light

5. Which of the following can survive without light for long? 1

(a) water plant **(b)** mushroom **(c)** green plant **(d)** grass

6. A flask without seeds as a control shows no change in lime water. The control: 1

(a) has seeds **(b)** is a waste
(c) shows oxygen **(d)** proves the change is caused by seeds

7. A tadpole has a tail but a frog does not. This shows: 1

(a) frogs are plants **(b)** tadpoles are birds
(c) tails are useless **(d)** change during the life cycle

8. Why do flowering plants need to reproduce even though individual plants can live many years? 1

(a) to continue the species after death **(b)** to grow tall
(c) to make fruit for animals **(d)** to get light

9. **Assertion (A):** The leaves of a touch-me-not plant fold when touched. 1
Reason (R): Living things respond to changes in their surroundings.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

10. **Assertion (A):** Plants respond to stimuli such as light. 1
Reason (R): Plants do not respond to anything around them.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why do plants usually not move from place to place like animals? 2

12. Why do living things need food and oxygen? 2

13. How can the dry seed in a packet show evidence of life? 2

14. Explain why a rolling ball is not a response to a stimulus. 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Explain how a student can prove that plants excrete carbon dioxide with a closed bag and lime water. 3

16. Describe three differences between the growth of a plant and the growth of an animal. 3

17. Explain with two examples how responses help in survival. 3

OR

Compare the basic needs of an elephant and a cactus. 3

18. Discuss why we cannot call a robot living even if it can learn and talk. 3

OR

How would you test whether an unknown specimen from a pond is living? 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** A potted sunflower on Teena's window in Ahmedabad bends towards the window. When she turned the pot around, after a few days the plant bent again towards the window. A fish in her aquarium keeps moving its mouth and gills, and an earthworm in the garden comes out after rain. 5
(i) What is the change in surroundings that makes the plant bend called?
(ii) Which organ helps the fish to breathe in water?
(iii) Which process is the taking in of oxygen and releasing carbon dioxide?
(iv) Why does the plant bend towards the window?

20. Compare the life processes of a plant and an animal. 5

OR

Explain, with examples, how organisms need each other for survival. 5

END OF QUESTION PAPER — Total: 40 Marks
