Mistakes to avoid:

- Swapping percentages: air is about **78 per cent nitrogen** and 21 per cent oxygen.
- Calling coal and petroleum renewable; they take millions of years to form.
- Writing that humus is made of rocks; it comes from decayed plants and animals.
- Thinking that soil erosion is the formation of soil; it is its **loss**.
- Saying that oxygen burns by itself; it only supports burning.
- Forgetting that wind, sunlight and water are renewable resources.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
