Mistakes to avoid:

- Writing that the Moon makes its own light; it only **reflects** sunlight.
- Writing nine planets or the wrong order; there are eight, starting with Mercury nearest to the Sun.
- Thinking the Moon itself changes shape; we only see different amounts of its lit half as it goes around the Earth.
- Mixing Chandrayaan (Moon) with Mangalyaan (Mars); Aryabhata was a satellite.
- Saying the Pole star is the brightest star or moves around; it appears nearly fixed and shows **north**.
- Confusing a star with a planet: the Sun is a star and the Earth is a planet.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
