ANSWER KEY & MARKING SCHEME SET 1

Chapter 1: **Locating Places on the Earth** | Class 6 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(c)** 40 hours	160 km / 4 km per hour
2	**(b)** allowed ships to find positions	Navigation
3	**(d)** forests, water and cities	Remote sensing
4	**(a)** 11 pm	75/15 = 5 hours ahead
5	**(b)** 1 cm on the map is 50,000 cm on the ground	Ratio
6	**(c)** each 15 degrees of longitude equals 1 hour	4 minutes per degree
7	**(a)** 12 noon	90/15 = 6 hours behind
8	**(a)** 500 m	50,000 cm = 500 m
9	**(a)** Both A and R are true and R is the correct explanation of A.	The Equator (0°) is the largest circle; the other parallels shrink towards the poles, which explains A.
10	**(c)** A is true but R is false.	Every meridian is a half circle from pole to pole, so A is true; parallels shrink towards the poles, so R is false.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	To represent the Earth on paper (1); To reduce distortion (1).	1+1
12	Accurate data (1); Updates (1).	1+1
13	Show risk zones (1); Plan evacuation (1).	1+1
14	17.5/3.5 = 5 (1); 1 cm = 5 km (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	14.5 x 12 (1); 174 km (1); Units (1).	1+1+1
16	Alphabetical list (1); Page and grid (1); Efficient (1).	1+1+1
17	Contrast (1); Convention (1); Key (1).	1+1+1
	OR: Kolkata is further east (1); Sun rises earlier (1); Longitude difference (1).	1+1+1
18	GPS (1); Live traffic (1); Voice guidance (1).	1+1+1
	OR: 60/15 (1); 4 hours (1); Ahead (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) 1 cm on the map stands for 5 km on the ground (1). (ii) $4 \times 5 = 20$ km (1). (iii) Distance (scale), direction and symbols (1). (iv) $20 \div 5 = 4$ cm; she should draw it 4 cm long (1) because 3 cm would stand for only 15 km (1).	1+1+1+2
20	Latitude (1); Longitude (1); Grid (1); Example (1); Uses (1).	1+1+1+1+1
	OR: Distance 144 km (1); Speed 72 (1); Time 2 h (1); Method (1); Check (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing up **latitude** and **longitude**: latitudes are east-west parallels measured north or south of the Equator; longitudes are north-south meridians measured east or west of the Prime Meridian.
- Saying meridians are parallel to each other. Only **parallels of latitude** are parallel; meridians meet at the poles.
- Writing a scale answer without converting: for 1 cm = 5 km, a 4 cm line is *4 x 5 = 20 km* (multiply), and real distance to map distance needs *division*.
- Getting the time difference backwards: places to the **east** are *ahead* in time and places to the west are behind; each 15° is 1 hour.
- Forgetting the direction letters (N, S, E, W) with degrees, e.g. writing 20° instead of 20°N, or calling the Prime Meridian a latitude.
- Confusing a **map**, an **atlas** and a **globe**: a map is flat, an atlas is a collection of maps, a globe is a spherical model of the Earth.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 2

Chapter 1: **Locating Places on the Earth** | Class 6 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(a)** 90 degrees	45 + 45
2	**(b)** 45 degrees	3 x 15
3	**(b)** they are at the same distance from the Equator	Parallels
4	**(d)** 6 hours	90/15
5	**(c)** it divides the Earth into Eastern and Western hemispheres	Reference line
6	**(d)** south-east	S and E
7	**(d)** back	Moving against rotation
8	**(d)** aligning it with directions	Alignment
9	**(d)** A is false but R is true.	The Prime Meridian passes through Greenwich near London, so A is false; R is true.
10	**(b)** Both A and R are true but R is not the correct explanation of A.	Both are true, but the reason about the Prime Meridian does not explain how the Equator divides the Earth.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	They meet at poles (1); Half circles (1).	1+1
12	Tells what it shows (1); Avoids confusion (1).	1+1
13	24 x 60 / 360 (1); Equals 4 minutes (1).	1+1
14	Show one theme only (1); Need key (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Globe true shape (1); Map portable (1); Distortion (1).	1+1+1
16	Scale (1); Projection (1); Selective information (1).	1+1+1
17	Astronomical centre (1); Calculation (1); Madhya rekha (1).	1+1+1
	OR: Reference (1); Time zones (1); Navigation (1).	1+1+1
18	Direction (1); Landmarks (1); Key (1).	1+1+1
	OR: Rainfall maps (1); Population maps (1); Resource maps (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) 0° (1). (ii) 1 hour, since $360^\circ \div 24 = 15^\circ$ (1). (iii) Ahead, because it lies to the east and the Sun reaches it first (1). (iv) Y: $60 \div 15 = 4$ hours ahead, so 4 p.m. (1); Z: $30 \div 15 = 2$ hours behind, so 10 a.m. (1).	1+1+1+2
20	Early maps (1); Atlas (1); Survey (1); GPS (1); Impact (1).	1+1+1+1+1
	OR: Rotation (1); Revolution (1); Tilt (1); Time (1); Seasons (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing up **latitude** and **longitude**: latitudes are east-west parallels measured north or south of the Equator; longitudes are north-south meridians measured east or west of the Prime Meridian.
- Saying meridians are parallel to each other. Only **parallels of latitude** are parallel; meridians meet at the poles.
- Writing a scale answer without converting: for 1 cm = 5 km, a 4 cm line is *4 x 5 = 20 km* (multiply), and real distance to map distance needs *division*.
- Getting the time difference backwards: places to the **east** are *ahead* in time and places to the west are behind; each 15° is 1 hour.
- Forgetting the direction letters (N, S, E, W) with degrees, e.g. writing 20° instead of 20°N, or calling the Prime Meridian a latitude.
- Confusing a **map**, an **atlas** and a **globe**: a map is flat, an atlas is a collection of maps, a globe is a spherical model of the Earth.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 3

Chapter 1: **Locating Places on the Earth** | Class 6 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(b)** direction and key	Usability
2	**(d)** all meridians meet there	Convergence
3	**(b)** the top of the page is south	Orientation
4	**(c)** curved surface of the Earth	Evidence
5	**(b)** the Earth bulges most at its middle	Geometry
6	**(c)** real-time position through satellites	Technology
7	**(c)** a magnetic compass	Compass needle points north
8	**(b)** globes are small and show little detail	Limitation
9	**(a)** Both A and R are true and R is the correct explanation of A.	Places to the east see the Sun first, so their time is ahead; this follows from the west-to-east rotation.
10	**(a)** Both A and R are true and R is the correct explanation of A.	Because a globe is spherical like the Earth, it avoids the distortions that come from flattening the surface.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	105/15 = 7 (1); 7 pm (1).	1+1
12	Hard to locate places (1); No exact navigation (1).	1+1
13	Latitude differs (1); Distance from Equator (1).	1+1
14	Reference for latitude (1); Start of counting (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Near Equator hot (1); Poles cold (1); Sun's rays (1).	1+1+1
16	Position (1); Course (1); Safety (1).	1+1+1
17	Change in shape (1); Change in size (1); Due to flattening (1).	1+1+1
	OR: More detail (1); Small areas (1); Planning (1).	1+1+1
18	Rotation: day/night (1); Revolution and tilt: seasons (1); Time differences (1).	1+1+1
	OR: Exact location (1); Faster rescue (1); GPS (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) Northern and Eastern Hemispheres (1). (ii) Southern Hemisphere (1). (iii) Yes, both are at 30°E (1). (iv) No, they lie on different parallels (20°N and 20°S) on opposite sides of the Equator (1); they are $20 + 20 = 40^\circ$ apart in latitude (1).	1+1+1+2
20	Planning (1); Defence (1); Disaster (1); Education (1); Business (1).	1+1+1+1+1
	OR: Purpose (1); Colours (1); Symbols (1); Examples (1); Use (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing up **latitude** and **longitude**: latitudes are east-west parallels measured north or south of the Equator; longitudes are north-south meridians measured east or west of the Prime Meridian.
- Saying meridians are parallel to each other. Only **parallels of latitude** are parallel; meridians meet at the poles.
- Writing a scale answer without converting: for 1 cm = 5 km, a 4 cm line is *4 x 5 = 20 km* (multiply), and real distance to map distance needs *division*.
- Getting the time difference backwards: places to the **east** are *ahead* in time and places to the west are behind; each 15° is 1 hour.
- Forgetting the direction letters (N, S, E, W) with degrees, e.g. writing 20° instead of 20°N, or calling the Prime Meridian a latitude.
- Confusing a **map**, an **atlas** and a **globe**: a map is flat, an atlas is a collection of maps, a globe is a spherical model of the Earth.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
