THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 6 — SOCIAL SCIENCE · HARD LEVEL CHAPTER TEST SET 1

Chapter 1: **Locating Places on the Earth** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. A map has a scale of 1 cm = 8 km. A route of 20 cm length is walked at 4 km per hour. The time taken is 1

(a) 5 hours **(b)** 160 hours **(c)** 40 hours **(d)** 80 hours

2. Why was the idea of grid lines important for global trade? 1

(a) allowed ships to repair **(b)** allowed ships to find positions

(c) allowed ships to cook **(d)** allowed ships to rest

3. A satellite map uses colours to show 1

(a) only borders **(b)** only time

(c) only names **(d)** forests, water and cities

4. It is 6 pm at Greenwich. What is the time at 75 degrees E? 1

(a) 11 pm **(b)** 3 am **(c)** 6 pm **(d)** 1 pm

5. A scale of 1:50,000 on a map means 1

(a) 1 m is 50 km

(b) 1 cm on the map is 50,000 cm on the ground

(c) 1 cm is 50 km

(d) 1 km is 50,000 cm

6. Which statement correctly relates longitude and time? 1

(a) each 15 degrees equals 1 day

(b) each degree equals 1 hour

(c) each 15 degrees of longitude equals 1 hour

(d) each 15 degrees equals 1 minute

7. It is 6 pm at Greenwich. What is the time at 90 degrees W? 1

(a) 12 noon **(b)** 12 midnight **(c)** 9 am **(d)** 6 pm

8. 1:50,000 equals how many metres on the ground for 1 cm on the map? 1

(a) 500 m **(b)** 5,000 m **(c)** 50,000 m **(d)** 50 m

9. **Assertion (A):** The Equator is the longest of all the parallels of latitude. 1

Reason (R): Parallels of latitude become smaller in size as we move from the Equator towards the poles.

Choose the correct option:

(a) Both A and R are true and R is the correct explanation of A.

(b) Both A and R are true but R is not the correct explanation of A.

(c) A is true but R is false.

(d) A is false but R is true.

10. **Assertion (A):** All the lines of longitude (meridians) are equal in length. 1
Reason (R): All the lines of latitude (parallels) are equal in length.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why do cartographers use scale and projections? 2

12. Why do modern maps use satellites? 2

13. How can maps help in disasters? 2

14. A map shows 3.5 cm for 17.5 km. Find the scale. 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. A map scale is 1 cm = 12 km. A river is 14.5 cm on the map. Find its actual length. 3

16. Explain how an atlas index helps to find places quickly. 3

17. Analyse how a map's colour choice affects readability. 3

OR

Explain with an example why time differs between Kolkata and Mumbai if they were using local times. 3

18. Examine how digital maps have changed navigation. 3

OR

A plane flies from 0 to 60 degrees E. How many hours ahead is local time? 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** Riya draws a sketch map of her district. Her map scale is 1 cm = 5 km. The distance from her school to the market is 4 cm on the map, and from the market to the river is 3 cm. She marks the school at the centre and the river towards the east of the market, using the arrow N for north. 5
(i) What does the scale 1 cm = 5 km tell us?
(ii) Find the real distance from the school to the market.
(iii) Which three things must every map have?
(iv) Riya's actual distance from the market to the river is 20 km. How many cm should she draw on the map?

20. Explain how latitude and longitude form the global grid and give a worked example of locating a place. 5

OR

Solve and explain: A map scale is 1 cm = 15 km. Two cities are 9.6 cm apart on the map. A train goes at 72 km/h. Find the time taken. 5

END OF QUESTION PAPER — Total: 40 Marks
