CLASS 8 — MATHS · FORMULA SHEET

Chapter 4: **Quadrilaterals** | Quick revision, one page

Quadrilateral

- Sum of the interior angles of a quadrilateral $= 360^\circ$.
- A quadrilateral has 4 sides, 4 angles and 2 diagonals.

Parallelogram

- Opposite sides are parallel and equal; opposite angles are equal.
- Adjacent angles are supplementary (sum 180°).
- Diagonals bisect each other.
- Perimeter $= 2(a + b)$.

Rectangle and square

- Rectangle: parallelogram with all angles 90°; diagonals are equal.
- Square: rectangle with all sides equal; diagonals are equal and perpendicular bisectors of each other.

Rhombus and kite

- Rhombus: parallelogram with all four sides equal; diagonals bisect each other at 90° and bisect the angles.
- Kite: two pairs of adjacent equal sides; one diagonal is the perpendicular bisector of the other and the angles between unequal sides are equal.

Trapezium

- One pair of parallel sides; the angles on the same leg add up to 180°.
- Isosceles trapezium: non-parallel sides equal, base angles equal, diagonals equal.
