CLASS 8 — MATHS · FORMULA SHEET

Chapter 14: **Area** | Quick revision, one page

Quadrilaterals

- Rectangle: $A = l \times b$. Square: $A = a^2$.
- Parallelogram: $A = b \times h$ (h is the perpendicular height).
- Rhombus: $A = \frac{1}{2} d_1 d_2$ (also $b \times h$).
- Trapezium: $A = \frac{1}{2}(a + b) \times h$, where a, b are the parallel sides.

Triangle

- $A = \frac{1}{2} \times \text{base} \times \text{height}$.
- A diagonal of a parallelogram divides it into two triangles of equal area.
- Triangles on the same base and between the same parallels have equal areas.

Composite figures

- Split into rectangles, triangles, trapezia, etc.; add the areas, or subtract the area removed.
- Cost of work = area × rate per unit area.

Units

- 1 m $= 100$ cm, so 1 m$^2 = 10\,000$ cm^2; 1 km$^2 = 10^6$ m^2.
- 1 hectare $= 10\,000$ m^2.
- Area is expressed in square units; perimeter in linear units.
