CLASS 8 — SCIENCE · FORMULA SHEET

Chapter 3: **Health: The Ultimate Treasure** | Quick revision, one page

Health

- Health is complete physical, mental and social well-being, not merely the absence of disease.
- Hygiene, balanced diet, exercise, sleep and a clean environment maintain health.

Types of disease

- Communicable (infectious): caused by germs; spread from person to person (cholera, malaria, dengue, influenza, measles, chickenpox).
- Non-communicable: not spread by germs (diabetes, cancer, heart disease).

Causes and carriers

- Pathogens: virus, bacteria, protozoa, fungi.
- Malaria: female Anopheles mosquito carries the protozoan Plasmodium.
- Dengue: Aedes mosquito.
- Cholera: contaminated food and water (bacteria).
- Influenza: air-borne (droplets).

Prevention

- Vaccination builds immunity (Edward Jenner: smallpox).
- Prevent mosquito breeding: no stagnant water; use nets.
- Safe drinking water, handwashing, covering coughs and sneezes.
- Antibiotics act on bacteria, not viruses.
