CLASS 8 — SCIENCE · FORMULA SHEET

Chapter 13: **Our Home: Earth, a Unique Life-sustaining Planet** | Quick revision, one page

Layers of the Earth

- Crust (outermost, thin, solid) $\rightarrow$ mantle (thickest, hot rock) $\rightarrow$ outer core (liquid iron and nickel) $\rightarrow$ inner core (solid iron and nickel).
- Seismic waves help us study the interior.

Spheres of the Earth

- Lithosphere: solid crust. Hydrosphere: water. Atmosphere: air. Biosphere: where life exists.
- Water covers about 71 per cent of the surface; land about 29 per cent.

Composition of air

- Nitrogen about 78 per cent; oxygen about 21 per cent; argon, carbon dioxide and others about 1 per cent.
- $78 + 21 + 1 = 100$ per cent.

Layers of the atmosphere

- Troposphere: lowest; weather occurs here; temperature falls with height.
- Stratosphere: contains the ozone layer, which absorbs ultraviolet rays.
- Above these: mesosphere, thermosphere and exosphere.
