ANSWER KEY & MARKING SCHEME SET 1

Chapter 1: **Natural Resources and Their Use** | Class 8 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(d)** Cultural acceptability	The community does not accept extraction
2	**(b)** cropping pattern needing more water plus free power	Over-extraction
3	**(b)** taking only what can be replaced	Balance
4	**(b)** not yet a usable resource	It lacks technological accessibility
5	**(a)** Crop diversification and rain-water harvesting	Reduces demand and recharges aquifers
6	**(c)** cultural unacceptability	Beliefs matter
7	**(c)** economic feasibility	Profit versus cost
8	**(b)** It harms health, soil and crops	Hence CPCB norms
9	**(b)** shared resource and competing demands	Allocation issues
10	**(a)** It renews only if cut slower than it regrows	Rate of use matters

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	It must be technologically accessible and economically feasible (1); It must also be culturally acceptable (1).	1+1
12	They flow across borders (1); States compete for limited water (1).	1+1
13	Natural pest repellents (1); Avoid harm from chemical pesticides (1).	1+1
14	Function: roots binding soil (1); Service: soil fertility for farming that humans benefit from (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Deep-sea oil needed advanced rigs (1); Once rigs became possible, oil became a resource (1); Resources are dynamic (1).	1+1+1
16	Shared by four regions (1); Competing farm and city demand (1); Rainfall variations (1).	1+1+1
17	Farmers had to stop chemical inputs (1); Soil needed time to recover (1); Training and certification were required (1).	1+1+1
	OR: Renewable: regenerate quickly (1); Non-renewable: millions of years (1); Examples: wind versus coal (1).	1+1+1
18	Raw materials exported without processing (1); Few jobs created (1); Weak governance (1).	1+1+1
	OR: Suggested crops by soil type (1); Advised seasonal irrigation (1); Gave methods of preserving seeds (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Technology example (1); Economy example (1); Culture example (1); Interplay of the three (1); Changes over time (1).	1+1+1+1+1
	OR: Causes (1); Effects on farmers (1); Effects on environment (1); Solutions (1); Role of government (1).	1+1+1+1+1
20	Definitions (1); Examples (1); Rate of regeneration (1); Over-use examples (1); Conclusion (1).	1+1+1+1+1
	OR: Importance of cement (1); Pollution effects (1); Regulation by CPCB (1); Technology fixes (1); Alternative materials (1).	1+1+1+1+1

Mistakes to avoid:

- Writing that Nature means only forests and rivers; it includes all living and non-living things not created by humans.
- Calling every resource renewable: timber and fish are renewable only if use stays below the rate of regeneration; coal and petroleum are non-renewable.
- Forgetting the **three** tests for a resource: technology, economic feasibility and cultural acceptability (age or distance is not a test).
- Mixing up **restoration** (back to the original state) with **regeneration** (new life and conditions), and ecosystem *function* with ecosystem *service*.
- Quoting figures wrongly: a mature tree gives about 275 litres of oxygen a day while a human needs about 350 litres; Sikkim went organic in 2016; the International Solar Alliance was launched with France in 2015.

- Treating the resource curse as 'resources cause poverty'; it means that plenty alone does not ensure development without value addition.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 2

Chapter 1: **Natural Resources and Their Use** | Class 8 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(c)** Filters, dust control and use of alternatives	Technological and policy steps
2	**(a)** Rain-water harvesting	Water seeps in
3	**(a)** Regeneration also creates new life and conditions	Regeneration is broader
4	**(c)** visitors value healthy, clean produce and landscapes	Eco-tourism
5	**(a)** Using renewables faster than they regenerate	It contradicts stewardship
6	**(a)** Pollination of crops by bees	Benefit to people from a natural function
7	**(b)** repel pests naturally	Natural pest control
8	**(a)** Abundance may coexist with underdevelopment	Another name for the curse
9	**(a)** Roots binding soil	The natural process itself
10	**(a)** Care of soil using natural inputs	Soil health

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Processing industries create jobs and income (1); Raw-material exporters earn less (1).	1+1
12	Large-scale organic farming is possible (1); It helps income, tourism and biodiversity (1).	1+1
13	If used faster than it regenerates (1); Example: over-fishing of tuna (1).	1+1
14	Encourages over-pumping (1); The water table falls (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Restoration returns the forest to health after damage (1); Regeneration creates new life and conditions (1); Together they keep the forest productive (1).	1+1+1
16	High-yielding paddy and wheat were promoted (1); They need heavy irrigation and chemicals (1); Groundwater was drawn faster than recharge (1).	1+1+1
17	Plenty of sunshine across much of the year (1); Reduces coal dependence (1); Large parks like Bhadla supply the grid (1).	1+1+1
	OR: Fish are caught before breeding (1); Numbers fall below recovery (1); Tuna decline shows the result (1).	1+1+1
18	Grow pulses and millets with less water (1); Rotate and mix crops (1); Use drip irrigation and harvest rain (1).	1+1+1
	OR: Exploitation takes without care (1); Stewardship uses wisely and restores (1); Stewardship considers future generations (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Decomposition (1); Role of decomposers (1); Soil enrichment (1); Disruption by pollution or over-harvest (1); Consequences (1).	1+1+1+1+1
	OR: Problems with chemicals (1); Natural methods (1); Government support (1); Benefits (1); Lessons (1).	1+1+1+1+1
20	Fish causes (1); Fish consequences (1); Glacier causes (1); Glacier consequences (1); Remedies (1).	1+1+1+1+1
	OR: About the text (1); Soil and plant knowledge (1); Natural pest control (1); Matches organic methods (1); Need to revive (1).	1+1+1+1+1

Mistakes to avoid:

- Writing that Nature means only forests and rivers; it includes all living and non-living things not created by humans.
- Calling every resource renewable: timber and fish are renewable only if use stays below the rate of regeneration; coal and petroleum are non-renewable.

- Forgetting the **three** tests for a resource: technology, economic feasibility and cultural acceptability (age or distance is not a test).
- Mixing up **restoration** (back to the original state) with **regeneration** (new life and conditions), and ecosystem *function* with ecosystem *service*.
- Quoting figures wrongly: a mature tree gives about 275 litres of oxygen a day while a human needs about 350 litres; Sikkim went organic in 2016; the International Solar Alliance was launched with France in 2015.
- Treating the resource curse as 'resources cause poverty'; it means that plenty alone does not ensure development without value addition.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 3

Chapter 1: **Natural Resources and Their Use** | Class 8 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(a)** one tree is not enough for one person's daily needs	Many trees are needed
2	**(d)** trade and sometimes disputes	Places depend on each other
3	**(d)** the sun will shine for billions of years	Renewable source
4	**(c)** Wood as material and as energy	A resource can have more uses
5	**(c)** the natural resource curse	Plenty without value addition
6	**(b)** international cooperation for a shared resource	Sunshine-rich nations pool efforts
7	**(d)** formation takes millions of years	Use is faster than formation
8	**(b)** creates jobs and earns more	Processing raises price
9	**(a)** allow regeneration of fish	Sustainable harvest
10	**(a)** a renewable resource in danger	Needs conservation

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	They store frozen water (1); They release it slowly to rivers (1).	1+1
12	Fishing is avoided in spawning season (1); Fish populations can regenerate (1).	1+1
13	Reserves may last about 50 years (1); Coal causes pollution and is non-renewable (1).	1+1
14	Dead matter is broken down by decomposers (1); Nutrients return to the soil (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Rising temperatures due to industrialisation (1); Deforestation reduces cooling (1); Melt exceeds snowfall (1).	1+1+1
16	Dust affects lungs and crops (1); Industries must follow CPCB norms (1); Use filters, green belts and alternative materials (1).	1+1+1
17	Rivers, seas and air cross borders (1); Pollution affects all (1); Alliances such as ISA share knowledge (1).	1+1+1
	OR: Places rich in a resource export it (1); Others import it (1); Interdependence and transport links develop (1).	1+1+1
18	Compost adds nutrients (1); Mixed crops prevent depletion (1); No chemical build-up (1).	1+1+1
	OR: Saving water and electricity (1); Reusing and recycling (1); Millions of small actions create big impact (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Settlement near resources (1); Trade (1); Conflict example (1); Displacement (1); Cooperation (1).	1+1+1+1+1
	OR: Why renewable (1); India's sunshine (1); Bhadla Solar Park (1); ISA aims (1); Benefits (1).	1+1+1+1+1
20	Meaning (1); Causes (1); Value addition (1); Skills and governance (1); Examples (1).	1+1+1+1+1
	OR: Citizen actions (1); Industry responsibility (1); Government laws (1); Community actions (1); Combined effect (1).	1+1+1+1+1

Mistakes to avoid:

- Writing that Nature means only forests and rivers; it includes all living and non-living things not created by humans.
- Calling every resource renewable: timber and fish are renewable only if use stays below the rate of regeneration; coal and petroleum are non-renewable.
- Forgetting the **three** tests for a resource: technology, economic feasibility and cultural acceptability (age or distance is not a test).
- Mixing up **restoration** (back to the original state) with **regeneration** (new life and conditions), and ecosystem *function* with ecosystem *service*.
- Quoting figures wrongly: a mature tree gives about 275 litres of oxygen a day while a human needs about 350 litres; Sikkim went organic in 2016; the International Solar Alliance was launched with France in 2015.

- Treating the resource curse as 'resources cause poverty'; it means that plenty alone does not ensure development without value addition.
