THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET 1

Chapter 1: **Natural Resources and Their Use** | Class 8 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(c)** extraction exceeds recharge	Aquifer drawn down
2	**(b)** lower photosynthesis and yield	Leaves are blocked
3	**(d)** It earns more from the same resource	Less volume, more benefit
4	**(a)** economic feasibility with cultural acceptability	One condition fails
5	**(b)** harvesting recharges groundwater	Recharge
6	**(c)** the resource curse risk	Resources alone do not ensure growth
7	**(a)** missing value addition	Core of the curse
8	**(a)** Buyers pay more for certified, chemical-free food	Market price
9	**(a)** Both A and R are true and R is the correct explanation of A.	A forest regrows, but only if trees are cut more slowly than they regrow; R states exactly this condition.
10	**(b)** Both A and R are true but R is not the correct explanation of A.	Both statements are true, but glacier storage does not explain falling groundwater in Punjab.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Cultural acceptability (1); Resource needs to be accepted by the community (1).	1+1
12	Industries turn raw material into costly goods (1); More jobs and income (1).	1+1
13	Resources become so only via technology and culture (1); Many are limited and unevenly spread (1).	1+1
14	Shares knowledge and finance for solar energy (1); Sunshine-rich nations benefit together (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Problem: groundwater depletion (1); Cause: water-intensive paddy (1); Cause: free power and heavy pumping (1).	1+1+1
16	Cost: lower yield at first (1); Cost: effort of compost (1); Benefit: premium price and soil health (1).	1+1+1
17	Saves raw material (1); Saves energy (1); Reduces waste and pollution (1).	1+1+1
	OR: Fish had time to breed (1); Population regenerated (1); Shows sustainable harvest (1).	1+1+1
18	Fixed stock with rising use (1); Need for time to build alternatives (1); Energy security (1).	1+1+1
	OR: Land use conflict with herders (1); Clean power benefits (1); Need for fair compensation (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) Groundwater (1). (ii) Water-intensive crops (wheat, paddy) and heavy pumping (1). (iii) Over-exploitation (1). (iv) Crop diversification reduces demand for water, and rain-water harvesting recharges the aquifer (2).	1+1+1+2
20	Deep-sea oil (1); Sacred hill (1); Costly mine (1); Evaluation of conditions (1); Changing over time (1).	1+1+1+1+1
	OR: ISA aims (1); Benefits (1); Tuna problem (1); Treaty needs (1); Role of India (1).	1+1+1+1+1

Mistakes to avoid:

- Writing that Nature means only forests and rivers; it includes all living and non-living things not created by humans.
- Calling every resource renewable: timber and fish are renewable only if use stays below the rate of regeneration; coal and petroleum are non-renewable.
- Forgetting the **three** tests for a resource: technology, economic feasibility and cultural acceptability (age or distance is not a test).
- Mixing up **restoration** (back to the original state) with **regeneration** (new life and conditions), and ecosystem *function* with ecosystem *service*.
- Quoting figures wrongly: a mature tree gives about 275 litres of oxygen a day while a human needs about 350 litres; Sikkim went organic in 2016; the International Solar Alliance was launched with France in 2015.
- Treating the resource curse as 'resources cause poverty'; it means that plenty alone does not ensure development without value addition.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET 2

Chapter 1: **Natural Resources and Their Use** | Class 8 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(a)** wrong, because waste still needs resources and costs	Efficiency still matters
2	**(b)** Expand renewables and improve efficiency	Long-term balance
3	**(b)** shrinks	Use exceeds regeneration
4	**(d)** Oil was useless before engines were invented	Needs and technology change value
5	**(c)** Texts such as Vrikshayurveda and community practices	Primary knowledge
6	**(d)** Transmitting the power to users	Distance and grid
7	**(d)** need to change crops or save water	Adaptation
8	**(d)** shrink	Short-term surplus, long-term loss
9	**(c)** A is true but R is false.	A is true (the paradox of plenty). R is false: resources are distributed unevenly, which leads to trade and sometimes conflict.
10	**(d)** A is false but R is true.	A is false: excess chemicals harm soil and water. R is true.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Soil life takes time to recover (1); Yields may dip before improving (1).	1+1
12	Recharges aquifers shared across the area (1); Raises well levels (1).	1+1
13	Farmers pump more (1); Aquifers deplete faster (1).	1+1
14	Over-fishing depletes shared stocks (1); Cooperation is needed between countries (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Value is lost by exporting raw material (1); Resource curse risk (1); Develop steel industries (1).	1+1+1
16	One tree is insufficient for one person (1); Large forests are required (1); Urban tree planting matters (1).	1+1+1
17	Beliefs prevent felling (1); Biodiversity is preserved (1); Conservation by community (1).	1+1+1
	OR: Technology is necessary but not enough (1); Cost must be affordable (1); Culture must accept (1).	1+1+1
18	Set up processing and power industries (1); Train local people (1); Invest earnings in schools and health (1).	1+1+1
	OR: Farmers earn without heavy irrigation (1); Less pumping (1); Aquifers recover (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) Sikkim, 2016 (1). (ii) Any two: compost, neem, mixed cropping (1). (iii) Stewardship (1). (iv) Soil and water are protected from chemical build-up, and organic produce earns higher prices and attracts tourism (2).	1+1+1+2
20	Punjab's approach (1); Sikkim's approach (1); Outcomes (1); Lessons for Punjab (1); Role of policy (1).	1+1+1+1+1
	OR: Short-term flood risk (1); Long-term shortage (1); Water saving (1); Harvesting and storage (1); Cooperation with upstream (1).	1+1+1+1+1

Mistakes to avoid:

- Writing that Nature means only forests and rivers; it includes all living and non-living things not created by humans.
- Calling every resource renewable: timber and fish are renewable only if use stays below the rate of regeneration; coal and petroleum are non-renewable.
- Forgetting the **three** tests for a resource: technology, economic feasibility and cultural acceptability (age or distance is not a test).
- Mixing up **restoration** (back to the original state) with **regeneration** (new life and conditions), and ecosystem *function* with ecosystem *service*.
- Quoting figures wrongly: a mature tree gives about 275 litres of oxygen a day while a human needs about 350 litres; Sikkim went organic in 2016; the International Solar Alliance was launched with France in 2015.

- Treating the resource curse as 'resources cause poverty'; it means that plenty alone does not ensure development without value addition.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 3

Chapter 1: **Natural Resources and Their Use** | Class 8 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(b)** pests adapt and soil becomes poor	Fragile system
2	**(d)** face less water	Shared river conflict
3	**(b)** Free energy can still encourage over-pumping	Need to cap extraction
4	**(c)** Forest filters water, so city gets clean drinking water	Function leading to benefit
5	**(b)** all countries agree to follow it	International resource needs treaties
6	**(c)** Cement gives housing but pollutes air	Benefit and harm together
7	**(d)** Many are limited and need careful use	Scarcity exists
8	**(b)** Assured purchase of less thirsty crops	Aligns incentive with sustainability
9	**(a)** Both A and R are true and R is the correct explanation of A.	The seam fails the technology condition, which is one of the three conditions in R.
10	**(a)** Both A and R are true and R is the correct explanation of A.	R gives the difference that makes regeneration broader.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Lower crop yield (1); Health costs (1).	1+1
12	The forest will shrink (1); Use is greater than regeneration (1).	1+1
13	Equipment and land are needed (1); Efficiency saves resources (1).	1+1
14	Community norms prevented cutting (1); Habitat remained intact (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Short run: more flow, floods (1); Long run: less water (1); Need to plan storage and saving (1).	1+1+1
16	Both depend on it for farms and cities (1); Rainfall is uncertain (1); No agreed share leads to disputes (1).	1+1+1
17	Choose plants suited to soil (1); Use compost and natural sprays (1); Rotate and mix plants (1).	1+1+1
	OR: Install treatment plant (1); Follow CPCB norms (1); Community monitoring and penalties (1).	1+1+1
18	Pond harvests rain and recharges (1); Bore well extracts groundwater (1); Pond is sustainable, bore well can deplete (1).	1+1+1
	OR: Glacier is renewed by snowfall (1); Melt is faster than renewal (1); So even renewables can be depleted (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) Technologically accessible, economically feasible and culturally acceptable (1). (ii) Economic feasibility (1). (iii) Cultural acceptability (1). (iv) Value depends on technology, economy and culture, which change over time; for example oil was of little use before engines were invented (2).	1+1+1+2
20	Industry duty (1); CPCB rules (1); Citizen vigilance (1); Alternatives (1); Balance with development (1).	1+1+1+1+1
	OR: Meaning of ideal (1); Nature of dispute (1); Fair sharing (1); Dialogue and tribunals (1); Future generations (1).	1+1+1+1+1

Mistakes to avoid:

- Writing that Nature means only forests and rivers; it includes all living and non-living things not created by humans.
- Calling every resource renewable: timber and fish are renewable only if use stays below the rate of regeneration; coal and petroleum are non-renewable.
- Forgetting the **three** tests for a resource: technology, economic feasibility and cultural acceptability (age or distance is not a test).
- Mixing up **restoration** (back to the original state) with **regeneration** (new life and conditions), and ecosystem *function* with ecosystem *service*.

- Quoting figures wrongly: a mature tree gives about 275 litres of oxygen a day while a human needs about 350 litres; Sikkim went organic in 2016; the International Solar Alliance was launched with France in 2015.
- Treating the resource curse as 'resources cause poverty'; it means that plenty alone does not ensure development without value addition.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
