THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 8 — SOCIAL SCIENCE · HARD LEVEL CHAPTER TEST SET 2

Chapter 1: **Natural Resources and Their Use** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. A student claims that solar power is renewable, so we can waste electricity. This is 1

(a) wrong, because waste still needs resources and costs
(b) irrelevant
(c) right only at night
(d) right

2. Which is the most sustainable way to meet growing energy demand? 1

(a) Stop all use **(b)** Expand renewables and improve efficiency
(c) Import coal only **(d)** Burn more coal

3. If a forest is cut at 5% a year but regrows at 2% a year, then over time the forest 1

(a) stays same **(b)** shrinks **(c)** turns into coal **(d)** grows

4. Statement: A resource's value is not fixed. Which situation supports it? 1

(a) Gold has been valuable forever
(b) Rain is always valuable
(c) Sand is always useless
(d) Oil was useless before engines were invented

5. Which source would be most valuable in understanding traditional resource wisdom? 1

(a) Stock tables
(b) Cement advertisements
(c) Texts such as Vrikshayurveda and community practices
(d) Weather maps only

6. A city builds a large solar park far from its homes. Which is the main challenge? 1

(a) Lack of oxygen **(b)** Lack of sunlight
(c) Excess coal **(d)** Transmitting the power to users

7. If a river's flow is reduced by 30% due to melting glaciers' decline, farmers downstream will 1

(a) grow more **(b)** stop needing water
(c) export water **(d)** need to change crops or save water

8. A glacier is melting; the river it feeds will first flood and later 1

(a) become a sea **(b)** grow forever **(c)** stay constant **(d)** shrink

9. **Assertion (A):** The 'natural resource curse' means that some resource-rich regions show slow development. 1

Reason (R): Natural resources are spread equally over all parts of the Earth.

Choose the correct option:

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

10. **Assertion (A):** Using large amounts of chemical fertilisers and pesticides improves soil health in the long run. 1

Reason (R): Chemicals from farms can build up in soil and water.

Choose the correct option:

(a) Both A and R are true and R is the correct explanation of A.

(b) Both A and R are true but R is not the correct explanation of A.

(c) A is true but R is false.

(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why does organic farming need patience in the first years? 2

12. Give a reason why rain-water harvesting benefits distant villages. 2

13. Why would a 'free power' policy backfire in a water-scarce state? 2

14. What does the tuna example show about international resources? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Case: A country exports iron ore and imports steel pipes. Analyse the situation and recommend a change. 3

16. Interpret: 'The tree gives 275 litres of oxygen a day while a person needs 350 litres.' Draw two conclusions. 3

17. Examine how culture can protect resources, using sacred groves. 3

OR

Evaluate the statement: 'Technology alone makes something a resource'. 3

18. Case: A district with large coal reserves has little industry. Suggest steps to avoid the curse. 3

OR

Explain how cash incentives for less thirsty crops can protect groundwater. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** Pema's farm in Sikkim had tired soil. She stopped using chemicals and began using compost, neem sprays and mixed cropping. Yields dipped for two years and then rose. Sikkim became India's first fully organic state in 2016, and visitors now come to enjoy its clean produce and landscapes. 5

(i) Which state became India's first fully organic state, and in which year?

(ii) Name two natural inputs used by Pema.

(iii) What word means using resources wisely with care so that renewables can regenerate?

(iv) State two benefits of the shift to organic farming.

20. Compare the approaches to resource use of Sikkim and Punjab. What can Punjab learn? 5

OR

A town depends on a river fed by a melting glacier. Predict changes over fifty years and advise the town council. 5

END OF QUESTION PAPER — Total: 40 Marks
