Mistakes to avoid:

- Forgetting that birth rate and death rate are per **1,000** people per year, and that sex ratio is **females per 1,000 males** (943 in 2011, not 94.3 or 1.06).
- Mixing fertility rate (children per woman, replacement level about 2.1) with birth rate (births per 1,000 population).
- Reversing demographic transition stages: Stage 1 both rates high; Stage 2 death rate falls, birth rate high (rapid growth).
- Reading a wide-based pyramid as an ageing population; a wide base means young, a wide top means ageing.
- Confusing push factors (lack of jobs at home) with pull factors (better jobs in cities).
- Saying a large young population automatically gives a demographic dividend; it needs skills and jobs. Population density is per square kilometre, and the census is every 10 years.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
