THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 10 — SCIENCE · HARD LEVEL CHAPTER TEST SET 1

Chapter 1: **Chemical Reactions and Equations** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Assertion (A): Rusting of iron is a chemical change. Reason (R): A new substance with different properties (iron oxide) is formed. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is false but R is true.
(d) A is true but R is false.

2. 12 g of carbon burns completely in 32 g of oxygen. The mass of carbon dioxide formed is: 1

(a) 28 g **(b)** 12 g **(c)** 44 g **(d)** 20 g

3. A metal X turns black on heating in air. The black product, on passing hydrogen over it, turns reddish brown. X is: 1

(a) magnesium **(b)** iron **(c)** copper **(d)** zinc

4. Assertion (A): Decomposition of calcium carbonate is an endothermic reaction. Reason (R): Heat energy is absorbed to break the bonds in the compound. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

5. Mg burns in oxygen: 24 g Mg gives 40 g MgO. Mass of oxygen used is: 1

(a) 24 g **(b)** 16 g **(c)** 40 g **(d)** 64 g

6. A student places metal M in blue copper sulphate solution. The blue colour fades to colourless and a reddish-brown solid forms. M could be: 1

(a) gold **(b)** mercury **(c)** zinc **(d)** silver

7. Assertion (A): Chips packets are flushed with nitrogen. Reason (R): Nitrogen is a reactive gas that speeds up oxidation of oil. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is false but R is true.
(d) A is true but R is false.

8. When 4 g of hydrogen completely reacts with 32 g of oxygen, the mass of water formed is: 1

(a) 28 g **(b)** 34 g **(c)** 40 g **(d)** 36 g

9. On adding dilute HCl to a solid X, a colourless gas evolves that turns lime water milky. X is likely: 1

(a) Na_2CO_3 **(b)** $NaCl$ **(c)** Na_2SO_4 **(d)** $NaNO_3$

10. Assertion (A): A balanced chemical equation obeys the law of conservation of mass. Reason (R): The number of atoms of each element is equal on both sides. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. 12 g of carbon burns completely in 32 g of oxygen. Find the mass of carbon dioxide formed and name the law applied. 2

12. Why is the mass of the residue less than the mass of lead nitrate taken when it is heated in an open tube? 2

13. Write the balanced equation for the thermal decomposition of zinc carbonate and name the gas evolved. 2

14. Why does an iron nail kept for some time in copper sulphate solution show an increase in mass? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Balance $\mathrm{PbO + C \longrightarrow Pb + CO}$ and identify the oxidising and reducing agents. 3

16. Green coating forms on copper vessels kept in humid air. Name the coating, give its cause and one prevention. 3

17. Dilute hydrochloric acid is added to zinc granules. Name the gas, state the test for it and write the equation. 3

OR

Balance $\mathrm{Fe_3O_4 + H_2 \longrightarrow Fe + H_2O}$ and name the substance oxidised. 3

18. Element X is burnt in air with a dazzling white flame giving a white powder Y. Y dissolved in water turns red litmus blue. Identify X and Y and give the equation. 3

OR

Copper powder is heated in a china dish and then hydrogen is passed over the product. Describe the changes and equations. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. Three test tubes contain iron nails: A with dry air (anhydrous calcium chloride), B with boiled water and oil, C with tap water open to air. State the result in each, the conclusion and one method of prevention. 5

OR

Ferrous sulphate crystals are heated. Describe the colour changes, write the equation, name the gases and the type of reaction. 5

20. Zinc and copper are separately treated with dilute sulphuric acid. State the observations and equations, and explain using reactivity. 5

OR

Explain why 5
(i) Zn displaces Cu from CuSO4,
(ii) iron nail gets brown coating,
(iii) AgCl turns grey in sunlight,
(iv) green coat forms on copper. Write equation for
(i) and (iii).

END OF QUESTION PAPER — Total: 40 Marks
