THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 10 — SCIENCE · NCERT-TYPE CHAPTER TEST SET 2

Chapter 6: **Control and Coordination** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. NCERT-type: questions in the style of the textbook examples and exercises.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Growth of the pollen tube towards the ovule is an example of: 1

(a) chemotropism **(b)** thigmotropism **(c)** phototropism **(d)** geotropism

2. Diabetes is caused due to deficiency of: 1

(a) thyroxine **(b)** adrenaline **(c)** oestrogen **(d)** insulin

3. The hormone secreted by the thyroid gland is: 1

(a) insulin **(b)** adrenaline **(c)** growth hormone **(d)** thyroxine

4. The leaves of the sensitive plant move on touch due to: 1

(a) cell division **(b)** change in turgor pressure

(c) photosynthesis **(d)** growth

5. Goitre is caused by the deficiency of: 1

(a) iodine **(b)** iron **(c)** calcium **(d)** vitamin C

6. Iodised salt is necessary in our diet for the synthesis of: 1

(a) adrenaline **(b)** insulin **(c)** thyroxine **(d)** testosterone

7. Which plant hormone promotes cell division? 1

(a) cytokinin **(b)** abscisic acid **(c)** ethylene **(d)** auxin

8. The brain is protected by: 1

(a) vertebrae only

(b) muscles

(c) cranium and fluid-filled balloon (meninges)

(d) ribs

9. Insulin is produced in the: 1

(a) thyroid **(b)** liver **(c)** adrenal **(d)** pancreas

10. The plant hormone which inhibits growth and causes wilting of leaves is: 1

(a) auxin **(b)** gibberellin **(c)** cytokinin **(d)** abscisic acid

SECTION — B (Very Short Answer Type) 4 × 2 = 8

Answer in about 20–30 words each.

11. How does phototropism occur in plants? 2

12. How does chemical coordination take place in animals? 2

13. Which part of the brain maintains posture and equilibrium of the body? 2

14. Which signals will get disrupted in case of a spinal cord injury? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. What are the major parts of the brain and their functions? 3

16. What is feedback mechanism? Give an example. 3

17. Compare nervous and hormonal coordination in animals. 3

OR

How is the brain protected in the body? 3

18. How is the movement of leaves of a touch-me-not plant different from a tendril movement? 3

OR

Describe how the movement of plants in response to gravity occurs. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. Describe the human brain: forebrain, midbrain, hindbrain and the functions of each part. 5

OR

Compare the nervous system and the endocrine system on five points. 5

20. Explain tropic and nastic movements in plants with examples. 5

OR

Describe protection of the brain and spinal cord, and the role of the spinal cord in reflexes. 5

END OF QUESTION PAPER — Total: 40 Marks
