THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 9 — SOCIAL SCIENCE · MEDIUM LEVEL CHAPTER TEST SET 3

Chapter 3: **Shaping the Earth's Surface (Geography)** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Medium level: multi-step questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Which landform would you expect in a limestone region? 1

(a) Fjord **(b)** Stalactite **(c)** Moraine **(d)** Barchan

2. A fold mountain chain is most likely at a 1

(a) mid-ocean ridge
(b) convergent boundary between two continental plates
(c) transform boundary
(d) desert

3. Heavy rain adds weight to soil and reduces friction, which increases the chance of 1

(a) dust storms **(b)** landslides
(c) volcanic eruptions **(d)** tsunamis

4. Cracks widened by a banyan's roots represent 1

(a) biological weathering **(b)** glacial erosion
(c) chemical weathering **(d)** wind erosion

5. A rift or ridge in the middle of an ocean indicates 1

(a) plates moving apart **(b)** plates sliding
(c) plates colliding **(d)** hot desert

6. The asthenosphere is important because it 1

(a) is the solid inner core
(b) is a partly molten layer that allows plates to move
(c) forms the rigid top of the plates
(d) produces ocean tides

7. Which is an exogenic (external) process? 1

(a) Earthquake **(b)** Folding
(c) Volcanic eruption **(d)** Weathering

8. Rain turning limestone into caves shows 1

(a) wind erosion **(b)** glacial deposition
(c) physical weathering **(d)** chemical weathering

9. A dust storm is more likely when 1

(a) the area is a delta **(b)** there is dense forest
(c) there is drought and sparse vegetation **(d)** there is heavy rain

10. Which is an endogenic (internal) force? 1

(a) Deposition by river **(b)** Earthquake
(c) Weathering **(d)** Erosion by wind

SECTION — B (Very Short Answer Type) 4 × 2 = 8

Answer in about 20–30 words each.

11. Why do caves and sinkholes appear mainly in limestone regions? 2

12. Why do convergent boundaries form mountains and volcanoes? 2

13. Why do divergent boundaries create new crust? 2

14. Why is the middle course of a river marked by deposition? 2

SECTION — C (Short Answer Type) 4 × 3 = 12

Answer in about 40–60 words each.

15. Explain two examples of traditional conservation in India. 3

16. Explain three uses of sand dunes. 3

17. Differentiate waterfall, meander and delta by course and process. 3

OR

Explain how cliffs, arches and stacks form in sequence. 3

18. What is the difference between a lateral and a medial moraine? 3

OR

A hillside farm loses topsoil every monsoon. Suggest three remedies. 3

SECTION — D (Long Answer Type) 2 × 5 = 10

Answer in about 100–150 words each.

19. Describe GLOF and avalanche with causes and effects. 5

OR

Explain how wind builds and shapes desert landforms. 5

20. Explain the agents of gradation and compare their landforms. 5

OR

Describe soil erosion consequences for farmers, miners and coastal people. 5

END OF QUESTION PAPER Total: 40 Marks
