THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 9 — SOCIAL SCIENCE · HARD LEVEL CHAPTER TEST SET 2

Chapter 3: **Shaping the Earth's Surface (Geography)** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Assertion (A): The Mid-Atlantic Ridge is a divergent boundary. Reason (R): Plates move apart and magma rises to form new crust. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

2. A geologist finds a deep, narrow sea inlet in Norway. It is a 1

(a) arch **(b)** cirque **(c)** fjord **(d)** delta

3. Assertion (A): Transform boundaries destroy crust. Reason (R): Plates slide past each other. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

4. Which of these would most likely increase dust storm frequency? 1

(a) Dense forests **(b)** Terracing
(c) Overgrazing and drought **(d)** Heavy rainfall

5. If a landslide occurs after road widening on a steep slope, the human factor is 1

(a) tectonic movement **(b)** glacier melt
(c) cutting the slope and poor drainage **(d)** wave action

6. Which is NOT caused by plate movement? 1

(a) Earthquake **(b)** Fold mountain **(c)** Sea breeze **(d)** Volcano

7. Assertion (A): GLOF is a type of flood. Reason (R): It occurs when a glacial lake dam breaks. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

8. Why are medial moraines present only where two glaciers meet? 1

(a) Lateral moraines of the two join **(b)** They are made by rivers
(c) They are made by wind **(d)** They are made by waves

9. **Assertion (A):** Terracing reduces soil erosion on hill slopes. 1
Reason (R): Terraces speed up the flow of water down the slope.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

10. **Assertion (A):** Transform boundaries destroy crust. 1
Reason (R): At a transform boundary the plates slide past each other.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why might a landslide be more severe after a forest fire? 2

12. How can landforms shape culture and trade? 2

13. Why do Himalayan states need disaster-preparedness drills? 2

14. How do glaciers affect rivers? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Describe how limestone caves become tourist attractions and what risks follow. 3

16. Explain why some regions develop barchans and others star dunes. 3

17. Explain how a sinkhole can be dangerous to settlements. 3

OR

Explain how contour bunding helps both soil and groundwater. 3

18. A delta farmer is worried about flood. Explain why flood is both a blessing and a risk. 3

OR

Compare coastal and glacial erosion landforms. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** Students follow a river from its source to the sea. In the first part the river is steep, flows in a V-shaped valley and drops over a waterfall. In the plains it makes winding bends, and one bend gets cut off to form a crescent-shaped lake. At the sea, in West Bengal, it deposits silt in a triangular fan like the Sundarbans. 5
(i) In which course of the river is a V-shaped valley found?
(ii) Name the crescent-shaped lake formed from a cut-off bend.
(iii) Name the fan-shaped deposit at the river mouth.
(iv) Explain how meanders form.

20. Discuss the impact of coastal erosion and deposition on human life. 5

OR

Explain how climate change may increase landform-related disasters. 5

END OF QUESTION PAPER — Total: 40 Marks
