THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 9 — SOCIAL SCIENCE · HARD LEVEL CHAPTER TEST SET 3

Chapter 3: **Shaping the Earth's Surface (Geography)** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Assertion (A): Terracing reduces soil erosion. Reason (R): Steps slow the flow of water down a slope. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

2. Assertion (A): Weathering and erosion are the same process. Reason (R): Weathering breaks rocks in place, whereas erosion carries material away. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

3. A river widens, its gradient falls and silt beds spread along its banks. Which course is this? 1

(a) Lower course **(b)** Headwaters **(c)** Waterfall zone **(d)** Upper course

4. Which pair BEST shows internal versus external forces? 1

(a) Weathering - erosion **(b)** Fold - fault
(c) Erosion - deposition **(d)** Earthquake - weathering

5. Ventifacts are best explained by 1

(a) glacier flow **(b)** river floods
(c) wave action **(d)** sandblasting by wind

6. Assertion (A): Deltas are fertile. Reason (R): Rivers deposit sediment at their mouths. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

7. Which landform is NOT formed by a glacier? 1

(a) Barchan **(b)** Hanging valley **(c)** Arete **(d)** Cirque

8. Assertion (A): Limestone regions often have caves. Reason (R): Acidic water dissolves limestone. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

9. **Assertion (A):** Fjords are good natural harbours. 1
Reason (R): They are deep and sheltered inlets of the sea.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

10. **Assertion (A):** Caves are commonly found in limestone regions. 1
Reason (R): Slightly acidic rainwater dissolves limestone.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why does the Indo-Australian plate matter for India's earthquakes? 2

12. Why are fjords found in high latitudes? 2

13. Why is deposition more important than erosion in the lower course? 2

14. How are oxbow lakes formed? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Why is early warning vital for avalanches? 3

16. Explain why the Ring of Fire has both earthquakes and volcanoes but the San Andreas Fault has mostly earthquakes. 3

17. Explain with examples how landforms influenced Indian history. 3

OR

A glacial lake above a valley expands each summer. Suggest two actions to reduce risk. 3

18. Why do many Himalayan towns face disaster risks from several landforms at once? 3

OR

Predict what may happen to a mountain village after heavy continuous rain on a deforested slope. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** A hill farmer in Nagaland follows the Zabo system. Another farmer cuts level steps on a steep hill, builds small earthen walls across the slope and ploughs along the contour lines. Rocks in a nearby desert crack because of large day-night temperature changes, and the roots of a banyan tree split a boulder. 5
(i) Name the weathering caused by temperature changes.
(ii) Name the weathering caused by roots.
(iii) What are the level steps cut on a hillside called?
(iv) How do bunds and contour ploughing reduce soil erosion?

20. Compare landforms and human uses of rivers, glaciers and wind. 5

OR

Explain how traditional Indian knowledge contributed to understanding of earthquakes and soil. 5

END OF QUESTION PAPER — Total: 40 Marks
