- A **biome** is a large natural region with similar climate, plants and animals; do not use it interchangeably with ecosystem or habitat.
- Energy **decreases** at higher levels of a food pyramid (lost as heat); top consumers are the fewest, and a food chain starts with producers.
- Match biomes correctly: taiga - coniferous trees; steppes - Asian grasslands; tundra - coldest; Gobi - cold desert; Rann of Kutch - salt desert; savanna - lions.
- A GI tag identifies a product by its place of origin (e.g. Nilgiri Tea, Khasi Mandarin); it is not a tag for quality alone or for the producer's name.
- Forest Rights Act = 2006; Chipko = Uttarakhand; Thenmala = India's first planned ecotourism destination; sacred groves are protected by religious belief.
- Commons are shared resources, not private property; wildlife corridors connect habitats instead of separating them.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
