Road No. 5, VKIA, Jaipur — 9887258679

CLASS 10 — MATHS · HARD LEVEL CHAPTER TEST SET 2

Chapter 9: **Some Applications of Trigonometry** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. From the top of a tower $9\sqrt{3}$ m high, the angles of depression of two objects on level ground, on the same side of the tower and in line with its foot, are 30° and 60°. The distance between the two objects is: 1

(a) 36 m **(b)** 18 m **(c)** $18\sqrt{3}$ m **(d)** 9 m

2. From the top of a building 9 m high, the angle of elevation of the top of a tower is 30° and the angle of depression of its foot is 60°. The height of the tower is: 1

(a) $12\sqrt{3}$ m **(b)** 3 m **(c)** 12 m **(d)** $3\sqrt{3}$ m

3. Two points on level ground lie on opposite sides of a tower of height 15 m, in line with its foot. The angles of elevation of the top of the tower from the two points are 45° and 60°. The distance between the two points is: 1

(a) $15 - 5\sqrt{3}$ m **(b)** $15 + 15\sqrt{3}$ m **(c)** $15 + 5\sqrt{3}$ m **(d)** 20 m

4. A person looks at the top of a vertical pole from a point on the ground. The top of the pole is $5\sqrt{3}$ m above the level of the person's eyes and the eyes are 15 m horizontally from the pole. The angle of elevation of the top of the pole is: 1

(a) 45° **(b)** 30° **(c)** 60° **(d)** $30\sqrt{3}^\circ$

5. The angle of elevation of the top of a vertical tower from a point on level ground is 30°. After walking 10 m towards the foot of the tower along a straight line, the angle of elevation becomes 45°. The height of the tower is: 1

(a) 10 m **(b)** $15 + 5\sqrt{3}$ m **(c)** $5 + 5\sqrt{3}$ m **(d)** $\frac{10\sqrt{3}}{3}$ m

6. A flagstaff stands on the top of a building 18 m high. From a point on level ground the angles of elevation of the bottom and the top of the flagstaff are 30° and 60° respectively. The length of the flagstaff is: 1

(a) 72 m **(b)** $36\sqrt{3}$ m **(c)** 54 m **(d)** 36 m

7. A car moves at a uniform speed towards the foot of a vertical tower. The angle of elevation of the top of the tower changes from 30° to 60° in 12 minutes. The further time the car takes to reach the foot of the tower is: 1

(a) 24 minutes **(b)** 6 minutes **(c)** 4 minutes **(d)** 12 minutes

8. From the top of a tower $12\sqrt{3}$ m high, the angles of depression of two objects on level ground, on the same side of the tower and in line with its foot, are 30° and 60°. The distance between the two objects is: 1

(a) $24\sqrt{3}$ m **(b)** 48 m **(c)** 24 m **(d)** 12 m

9. **Assertion (A):** The angle of elevation of an object can be 120°. 1

Reason (R): The angle of depression of a point on the ground seen from the top of a tower equals the angle of elevation of the top seen from that point.

Choose the correct option:

(a) Both A and R are true and R is the correct explanation of A.

(b) Both A and R are true but R is not the correct explanation of A.

(c) A is true but R is false.

(d) A is false but R is true.

10. **Assertion (A):** A 20 m high pole casts a shadow 20 m long when the angle of elevation of the Sun is 45°. 1
Reason (R): The angle of elevation is measured from the horizontal line through the eye of the observer.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. A flagstaff stands on the top of a building 15 m high. From a point on level ground the angles of elevation of the bottom and the top of the flagstaff are 45° and 30° respectively. Find the length of the flagstaff. 2

12. A car moves at a uniform speed towards the foot of a vertical tower. The angle of elevation of the top of the tower changes from 30° to 60° in 10 minutes. Find the further time the car takes to reach the foot of the tower. 2

13. The angle of elevation of the top of a vertical tower from a point on level ground is 45°. After walking 16 m towards the foot of the tower along a straight line, the angle of elevation becomes 60°. Find the height of the tower. 2

14. A flagstaff stands on the top of a building 21 m high. From a point on level ground the angles of elevation of the bottom and the top of the flagstaff are 45° and 30° respectively. Find the length of the flagstaff. 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. A building is $22\sqrt{3}$ m high. From the top of the building the angle of elevation of the top of a tower is 30° and from the foot of the building it is 60°. Find the height of the tower and its distance from the building (in this order). 3

16. A flagstaff stands on the top of a building 18 m high. From a point on level ground the angles of elevation of the bottom and the top of the flagstaff are 45° and 60° respectively. Find the length of the flagstaff. 3

17. Two points on level ground lie on opposite sides of a tower of height 18 m, in line with its foot. The angles of elevation of the top of the tower from the two points are 45° and 60°. Find the distance between the two points. 3

OR

A building is $24\sqrt{3}$ m high. From the top of the building the angle of elevation of the top of a tower is 30° and from the foot of the building it is 60°. Find the height of the tower and its distance from the building (in this order). 3

18. A flagstaff stands on the top of a building 22 m high. From a point on level ground the angles of elevation of the bottom and the top of the flagstaff are 45° and 60° respectively. Find the length of the flagstaff. 3

OR

Two points on level ground lie on opposite sides of a tower of height 24 m, in line with its foot. The angles of elevation of the top of the tower from the two points are 45° and 60°. Find the distance between the two points. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** Rahul is flying a kite. The string is 60 m long and is stretched straight, making an angle of 30° with the horizontal ground (assume no slack, and use $\sqrt{3} = 1.73$). 5
(i) Which ratio connects the height of the kite with the length of the string?
(ii) Find the height of the kite.
(iii) Find the horizontal distance of the kite from Rahul.
(iv) If the string, still 60 m long, now makes an angle of 60° with the ground, find the new height and its increase.

20. A building is 10 m high. From the top of the building the angle of elevation of the top of a tower is 45° and from the foot of the building it is 60°. Find the height of the tower and its distance from the building (in this order). 5

OR

Two vertical poles of equal height stand on opposite sides of a road 144 m wide. From a point on the road between them, the angles of elevation of the tops of the poles are 60° and 30°. Find the common height of the poles and the distances of the point from the poles (nearer pole first). 5

END OF QUESTION PAPER — Total: 40 Marks
