ANSWER KEY & MARKING SCHEME SET 1

Chapter 6: **Resources and Development (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(d)** rows of trees planted to check wind	Wind check
2	**(b)** iron	Iron oxide
3	**(d)** land degradation	Problem
4	**(c)** sustainable use of resources	Planning
5	**(d)** fertile	River-made
6	**(d)** can be used to satisfy our needs	Use
7	**(a)** the present as well as future generations	Principle
8	**(c)** alluvial	40%
9	**(c)** hilly and mountainous areas with adequate rainfall	Hilly
10	**(c)** biotic resources	Living

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Regur is another name for black soil (1); It is formed from lava rock and is ideal for cotton (1).	1+1
12	Soil erosion is the removal of the top layer of soil by wind or water (1); It reduces fertility and damages land (1).	1+1
13	Contour ploughing is ploughing along the contour lines of a slope (1); It slows down the flow of water and reduces soil erosion (1).	1+1
14	Stock is the material that could satisfy needs but cannot be used for lack of technology (1); For example, hydrogen in water as a source of energy (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Potential resources (1); Developed resources (1); Stock and reserves (1).	1+1+1
16	It is made of fine clay and retains moisture (1); It cracks when dry and is sticky when wet (1); It is best for cotton (1).	1+1+1
17	Coal (1); Petroleum (1); Iron ore and other minerals (1).	1+1+1
	OR: Solar energy (1); Wind energy (1); Water and forests (1).	1+1+1
18	It forms in hot, humid areas with heavy rain (1); It is leached and poor in nutrients (1); It suits tea, coffee and cashew (1).	1+1+1
	OR: Contour ploughing (1); Terrace farming and strip cropping (1); Shelter belts and afforestation (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Resources by origin are biotic and abiotic (1); By exhaustibility, renewable and non-renewable (1); By ownership, individual, community, national and international (1); By status, potential, developed, stock and reserves (1); Examples include forests, minerals, solar energy and coal (1).	1+1+1+1+1
	OR: Alluvial soil is the most widespread in India (1); It is deposited by rivers like the Ganga, Indus and Brahmaputra (1); It has two types, bhangar (old) and khadar (new) (1); It is rich in potash and lime (1); It suits sugarcane, wheat and rice (1).	1+1+1+1+1
20	Laterite soil forms in hot, humid areas with alternating wet and dry seasons (1); Heavy rain leaches away nutrients (1); It lacks humus (1); It needs manure and fertilisers (1); It is suitable for tea, coffee and cashew (1).	1+1+1+1+1
	OR: Sustainable development means growth without harming the environment (1); It meets present needs and protects future needs (1); The Rio Earth Summit of 1992 adopted Agenda 21 (1); Gandhi said that there is enough for everybody's need but not for anybody's greed (1); Planning and conservation of resources are needed (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing up classifications: **renewable/non-renewable** (by exhaustibility) and **biotic/abiotic** (by origin) are different; coal is both biotic and non-renewable.
- Confusing **stock** (not yet usable for lack of technology) with **reserves** (the part of stock that can be put to use with existing technology).
- Swapping **bangar** (older alluvium, kankar nodules) and **khadar** (newer alluvium, more fertile).
- Writing that red soil is formed from alluvium; it develops on **crystalline igneous and metamorphic rocks**, and its colour is due to iron compounds.
- Calling black soil 'alluvial' or forgetting it is poor in phosphoric content though rich in lime, potash and magnesium.
- Dating the Earth Summit and **Agenda 21** at Rio de Janeiro wrongly; both are **1992**, not Kyoto or Paris.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 2

Chapter 6: **Resources and Development (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(c)** renewable resource	Natural flow
2	**(b)** the removal of top soil by water or wind	Loss
3	**(c)** unfit for cultivation	Badlands
4	**(d)** renewable resource	Continuous
5	**(d)** leaching	Heavy rain
6	**(c)** human greed	Quote
7	**(c)** along the contour lines of a slope	Slopes
8	**(c)** the nation	State
9	**(c)** left uncultivated for one or more agricultural seasons	Rest
10	**(b)** hill slopes	Steps

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Abiotic resources are composed of non-living things (1); Examples are rocks, minerals and water (1).	1+1
12	Terrace farming is cultivation on steps cut into hill slopes (1); It reduces run-off and soil erosion (1).	1+1
13	A resource is anything in the environment that can be used to satisfy human needs (1); It must be technologically accessible, economically feasible and culturally acceptable (1).	1+1
14	A shelter belt is a row of trees planted to check wind speed (1); It protects soil and crops in dry areas (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Resources are unevenly distributed (1); Many resources are limited (1); Planning avoids wastage and imbalance (1).	1+1+1
16	It is fertile and rich in potash and lime (1); It is deposited by rivers (1); It covers the northern plains and deltas (1).	1+1+1
17	Cotton (1); Sugarcane and jowar (1); Wheat and groundnut (1).	1+1+1
	OR: Alluvial soil (1); Black soil (1); Red, laterite, arid and forest soils (1).	1+1+1
18	Heavy rain and running water (1); Strong winds (1); Deforestation and overgrazing (1).	1+1+1
	OR: Individual resources (1); Community or national resources (1); International resources (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Resources can be owned by individuals, such as houses and plots (1); Community resources include village pastures and parks (1); National resources lie within the country's boundaries (1); International resources lie beyond 200 nautical miles in the ocean (1); They are regulated by international institutions (1).	1+1+1+1+1
	OR: Black soil is also called regur (1); It is formed from volcanic lava (1); It is clayey and retains moisture (1); It becomes sticky when wet and cracks when dry (1); It is best for cotton (1).	1+1+1+1+1
20	Land is used for forests, agriculture and non-agricultural uses (1); Some land is barren or wasteland (1); Fallow land is left uncultivated for some time (1); Net sown area is the area under crops (1); Land use depends on soil, climate and human factors (1).	1+1+1+1+1
	OR: Soil erosion is the removal of soil by wind and water (1); Gully erosion cuts deep channels in fields (1); Sheet erosion removes the top layer over a wide area (1); It lowers fertility and makes land unfit (1); Deforestation, overgrazing and farming on slopes cause it (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing up classifications: **renewable/non-renewable** (by exhaustibility) and **biotic/abiotic** (by origin) are different; coal is both biotic and non-renewable.
- Confusing **stock** (not yet usable for lack of technology) with **reserves** (the part of stock that can be put to use with existing technology).

- Swapping **bangar** (older alluvium, kankar nodules) and **khadar** (newer alluvium, more fertile).
- Writing that red soil is formed from alluvium; it develops on **crystalline igneous and metamorphic rocks**, and its colour is due to iron compounds.
- Calling black soil 'alluvial' or forgetting it is poor in phosphoric content though rich in lime, potash and magnesium.
- Dating the Earth Summit and **Agenda 21** at Rio de Janeiro wrongly; both are **1992**, not Kyoto or Paris.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 3

Chapter 6: **Resources and Development (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(c)** non-renewable resources	Limited
2	**(a)** Rio Summit	1992
3	**(a)** area sown with crops, counting land sown many times only once	Actual sowing
4	**(b)** non-renewable resource	Fossil fuel
5	**(b)** newer alluvium	Lowland
6	**(d)** older alluvium with kankar nodules	Upland
7	**(a)** cotton	Regur
8	**(c)** plots, houses and gardens	Owner
9	**(c)** Rajasthan	Dry
10	**(c)** all countries	Open ocean

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Biotic resources are obtained from the living world (1); Examples are forests, animals and fisheries (1).	1+1
12	Non-renewable resources take millions of years to form and do not get replenished quickly (1); Examples are minerals and fossil fuels (1).	1+1
13	Renewable resources can be replenished by physical, chemical or mechanical processes (1); Examples are solar energy, wind and water (1).	1+1
14	Reserves are the subset of stock that can be used with the available technology (1); Their use has not yet begun, e.g., water in dams (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Forest (1); Net sown area (1); Fallow land and barren land (1).	1+1+1
16	Biotic resources (1); Abiotic resources (1); These two groups are based on origin (1).	1+1+1
17	Overgrazing (1); Mining and deforestation (1); Over-irrigation and industrial waste (1).	1+1+1
	OR: Growing crops (1); Supporting vegetation and forests (1); Providing nutrients and water to plants (1).	1+1+1
18	Wheat (1); Sugarcane (1); Rice (1).	1+1+1
	OR: It forms on crystalline rocks (1); It is red due to iron (1); It is low in humus and nitrogen (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Resource planning is the judicious use of resources (1); It is needed because of uneven distribution of resources (1); The first stage is identification and inventory (1); The second is evolving a planning structure (1); The third is matching with national development plans (1).	1+1+1+1+1
	OR: Contour ploughing slows the water flow on slopes (1); Terrace farming cuts steps on slopes (1); Strip cropping alternates crops with grass strips (1); Shelter belts check the wind (1); Afforestation holds the soil (1).	1+1+1+1+1
20	Red soil develops on crystalline igneous rocks (1); Iron gives it a red colour (1); It appears yellow when hydrated (1); It is poor in humus and nitrogen (1); It is found in Odisha, Chhattisgarh and the Deccan plateau (1).	1+1+1+1+1
	OR: Arid soils are red to brown and sandy, found in Rajasthan (1); They are saline and low in humus (1); Forest soils occur in hilly areas (1); They are loamy in valleys and coarse on slopes (1); In snow-covered areas they are acidic with low humus (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing up classifications: **renewable/non-renewable** (by exhaustibility) and **biotic/abiotic** (by origin) are different; coal is both biotic and non-renewable.
- Confusing **stock** (not yet usable for lack of technology) with **reserves** (the part of stock that can be put to use with existing technology).
- Swapping **bangar** (older alluvium, kankar nodules) and **khadar** (newer alluvium, more fertile).
- Writing that red soil is formed from alluvium; it develops on **crystalline igneous and metamorphic rocks**, and its colour is due to iron compounds.
- Calling black soil 'alluvial' or forgetting it is poor in phosphoric content though rich in lime, potash and magnesium.
- Dating the Earth Summit and **Agenda 21** at Rio de Janeiro wrongly; both are **1992**, not Kyoto or Paris.
