ANSWER KEY & MARKING SCHEME SET 1

Chapter 9: **Agriculture (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(d)** winter	October to December
2	**(c)** Kharif crop	Oilseed
3	**(a)** Andhra Pradesh	Local names
4	**(a)** the north-east	Tribal areas
5	**(b)** fixing nitrogen	Legumes
6	**(a)** Watermelon	Summer
7	**(d)** tropical and sub-tropical climate with well-distributed rain	Plantation
8	**(b)** Yemen	Baba Budan hills
9	**(a)** Rabi crop	Winter
10	**(c)** modern inputs such as HYV seeds, fertilisers and pesticides	Higher yield

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Bhoodan was a movement led by Vinoba Bhave in which landlords were asked to donate land to the landless (1); It started at Pochampalli in 1951, and Gramdan meant donation of whole villages (1).	1+1
12	Pulses are the major source of protein in a vegetarian diet (1); They are leguminous crops that restore soil fertility by fixing nitrogen (1).	1+1
13	Horticulture is the cultivation of fruits and vegetables (1); India is a leading producer of tropical and temperate fruits and vegetables (1).	1+1
14	Plantation farming is a type of commercial farming where a single crop is grown on a large area (1); Tea, coffee, rubber, sugarcane and banana are examples (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Cotton and jute are fibre crops (1); Cotton grows in drier parts of the black soil of the Deccan plateau (1); Jute, the golden fibre, grows on well-drained fertile soil of flood plains (1).	1+1+1
16	Wheat is a Rabi crop needing a cool growing season and bright sunshine at the time of ripening (1); It needs 50 to 75 cm of annual rainfall evenly distributed (1); The Ganga-Satluj plains and the black soil region of the Deccan are the chief wheat areas (1).	1+1+1
17	Primitive subsistence farming uses simple tools on small plots and depends on monsoon (1); Intensive subsistence farming is practised in densely populated areas with high inputs (1); Commercial farming uses modern inputs for crops grown for sale (1).	1+1+1
	OR: It uses modern inputs such as HYV seeds, fertilisers and pesticides (1); Crops are grown for sale rather than for the family (1); Level of commercialisation varies, e.g., rice is commercial in Haryana and Punjab but subsistence in Odisha (1).	1+1+1
18	It is practised on small land holdings with family labour (1); Land is farmed intensively with high doses of inputs and irrigation (1); Output per unit area is high but farmers get little surplus (1).	1+1+1
	OR: Sugarcane needs a hot and humid climate with temperature of 21 to 27 degrees Celsius (1); It needs annual rainfall of 75 to 100 cm or irrigation (1); Major producers are Uttar Pradesh, Maharashtra, Karnataka and Tamil Nadu (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks

19	Wheat is a Rabi crop of cool growing season and bright sunshine at ripening (1); It needs 50 to 75 cm of evenly distributed annual rainfall (1); The Ganga-Satluj plains and the black soil Deccan are main areas (1); UP, Punjab, Haryana, Madhya Pradesh, Bihar and Rajasthan are major producers (1); It is the second most important cereal (1).	1+1+1+1+1
	OR: Sugarcane needs hot and humid climate, 21 to 27 degrees Celsius and 75 to 100 cm rain (1); Uttar Pradesh, Maharashtra, Karnataka and Tamil Nadu are the major producers (1); Oilseeds such as groundnut, mustard and sesamum give edible oil (1); Cotton grows in black soil with a frost-free period of about 210 days (1); These are raw material for sugar, oil and textile industries (1).	1+1+1+1+1
20	Rice needs temperature above 25 degrees Celsius (1); Rainfall above 100 cm is required (1); It is a Kharif crop (1); It is grown in the plains of north and north-east, coastal and delta regions (1); In Punjab, Haryana and western UP it is grown with irrigation (1).	1+1+1+1+1
	OR: Agriculture employs about two-thirds of the population (1); It provides food and raw materials for industry (1); It contributes to national income and exports (1); It gives livelihoods to rural people (1); Its growth is essential for economic development (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing seasons: **rabi** (wheat, gram, mustard, barley, peas), **kharif** (rice, maize, cotton, jute, bajra, jowar) and **zaid** (watermelon, cucumber, fodder).
- Calling ragi, jowar and bajra pulses; they are **millets** (coarse grains). Pulses (tur, moong, urad, gram) fix nitrogen in the soil.
- Saying India is the largest producer of sugarcane or rice; it is the **second** largest producer of both (after Brazil and China respectively).
- Confusing **primitive subsistence** (small plots, hoe, dao; slash and burn) with **intensive subsistence** (high population pressure, high doses of inputs) and with commercial farming.
- Using **Green Revolution** (package technology for foodgrains) and **White Revolution** (Operation Flood, milk) as synonyms.
- Writing that Bhoodan was started by Gandhiji; **Vinoba Bhave** started it after Gandhiji's martyrdom.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTER

ANSWER KEY & MARKING SCHEME SET 2

Chapter 9: **Agriculture (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(d)** Ganga-Satluj plains	North-west
2	**(d)** millets	Coarse grains
3	**(d)** plantation crops	Commercial
4	**(b)** 200 cm	Kerala
5	**(c)** eastern and southern India	Humid areas
6	**(a)** Madhya Pradesh	Local names
7	**(a)** fodder	Kharif
8	**(b)** high population pressure	Small holdings
9	**(c)** 25°C	High
10	**(c)** two-thirds	Major occupation

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Slash and burn farming means farmers clear a patch of land by cutting and burning vegetation and grow crops (1); When soil fertility falls, they move to a new patch; it is called jhumming in the north-east (1).	1+1
12	The Green Revolution was the agricultural reform of the 1960s that introduced HYV seeds, fertilisers and better irrigation (1); It raised foodgrain output, especially wheat and rice, in Punjab, Haryana and western UP (1).	1+1
13	Agriculture is the cultivation of crops and rearing of animals (1); It is the primary activity that provides food and raw materials and employs about two-thirds of Indians (1).	1+1
14	Operation Flood, or the White Revolution, was a programme to increase milk production through cooperatives (1); It made India self-sufficient in milk (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Kharif crops are grown with the onset of monsoon and harvested in September-October (1); Paddy, maize, jowar, bajra, tur, moong, urad, cotton, jute and groundnut are Kharif crops (1); Paddy is grown in Assam, West Bengal, Odisha and coastal regions (1).	1+1+1
16	Groundnut, mustard, sesamum, castor seed and linseed are oilseeds (1); They are used as cooking mediums and for soaps, cosmetics and ointments (1); Groundnut is a Kharif crop and the main oilseed of India (1).	1+1+1
17	Zaid crops are grown in the short season between Rabi and Kharif, in summer (1); Watermelon, muskmelon, cucumber and vegetables are Zaid crops (1); Some fodder crops are also grown (1).	1+1+1
	OR: Rice is a Kharif crop needing temperature above 25 degrees Celsius (1); It needs annual rainfall above 100 cm, or irrigation in low rainfall areas (1); It is grown in the northern plains, north-east, coastal and delta regions (1).	1+1+1
18	The Green Revolution used HYV seeds, fertilisers and irrigation (1); It increased foodgrain output, especially wheat and rice (1); It benefitted mainly Punjab, Haryana and western UP, raising regional inequality (1).	1+1+1
	OR: Vinoba Bhave started Bhoodan in 1951 asking landlords to donate land to the landless (1); Gramdan meant villagers putting land under common ownership (1); It was voluntary, so its impact was limited (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	The Green Revolution in the 1960s introduced HYV seeds, chemical fertilisers and irrigation (1); It raised wheat and rice output and made India self-sufficient in foodgrains (1); It benefited Punjab, Haryana and western UP (1); But it increased regional and income disparities and damaged soil (1); Heavy chemical use also caused pollution (1).	1+1+1+1+1
	OR: Globalisation opened markets to foreign competition (1); Indian farmers had to compete with cheaper imports (1); Export opportunities increased for some crops (1); Small farmers faced price fluctuations and debt (1); Government support such as MSP is needed (1).	1+1+1+1+1

20	Rabi crops are sown in winter and harvested in summer, e.g., wheat and mustard (1); Kharif crops are sown with the monsoon, e.g., rice, cotton and jute (1); Zaid crops are grown in the short summer season, e.g., watermelon and cucumber (1); Season depends on temperature and rainfall (1); Irrigation allows multiple cropping (1).	1+1+1+1+1
	OR: Tea needs a warm, moist, frost-free climate and well-drained soil (1); It grows in Assam, Darjeeling and the south (1); Coffee of Arabica variety came from Yemen and is grown in the Nilgiris of Karnataka, Kerala and Tamil Nadu (1); Rubber needs more than 200 cm rainfall and temperature above 25 degrees Celsius (1); It is mainly grown in Kerala, Tamil Nadu and Karnataka (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing seasons: **rabi** (wheat, gram, mustard, barley, peas), **kharif** (rice, maize, cotton, jute, bajra, jowar) and **zaid** (watermelon, cucumber, fodder).
- Calling ragi, jowar and bajra pulses; they are **millets** (coarse grains). Pulses (tur, moong, urad, gram) fix nitrogen in the soil.
- Saying India is the largest producer of sugarcane or rice; it is the **second** largest producer of both (after Brazil and China respectively).
- Confusing **primitive subsistence** (small plots, hoe, dao; slash and burn) with **intensive subsistence** (high population pressure, high doses of inputs) and with commercial farming.
- Using **Green Revolution** (package technology for foodgrains) and **White Revolution** (Operation Flood, milk) as synonyms.
- Writing that Bhoodan was started by Gandhiji; **Vinoba Bhave** started it after Gandhiji's martyrdom.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

ANSWER KEY & MARKING SCHEME SET 3

Chapter 9: **Agriculture (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(d)** Brazil	Brazil first
2	**(a)** Western Ghats	Local name
3	**(a)** Groundnut	Edible oil
4	**(d)** pulses	Leguminous
5	**(a)** Rice	Monsoon crop
6	**(d)** Wheat	Winter sown
7	**(b)** Vinoba Bhave	1951
8	**(c)** golden fibre	Fibre crop
9	**(b)** monsoon	June-July
10	**(a)** simple tools like the hoe, dao and digging stick	Small plots

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Primitive subsistence farming is practised on small patches of land with primitive tools like the hoe, dao and digging stick (1); It depends on monsoon, natural fertility of soil and family labour (1).	1+1
12	Commercial farming uses higher doses of modern inputs such as HYV seeds, chemical fertilisers and pesticides (1); The crops are grown for sale in the market, as in Punjab and Haryana (1).	1+1
13	Intensive subsistence farming is practised in areas of high population pressure on land (1); It uses high doses of biochemical inputs and irrigation to get high output per unit area (1).	1+1
14	The three cropping seasons are Rabi, Kharif and Zaid (1); Rabi is sown in winter, Kharif with the monsoon and Zaid in the summer months (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Coffee of Arabica variety was brought from Yemen (1); It is grown in the Nilgiri region of Karnataka, Kerala and Tamil Nadu (1); Indian coffee is known for its good quality (1).	1+1+1
16	Plantation farming grows a single crop on a large area (1); It uses a large labour force and capital and has links to industry (1); Tea, coffee and rubber are plantation crops, mostly for export (1).	1+1+1
17	Tea needs a tropical and sub-tropical climate, deep fertile well-drained soil rich in humus (1); It needs a warm, moist, frost-free climate all through the year (1); It grows in Assam, Darjeeling, Tamil Nadu and Kerala (1).	1+1+1
	OR: Rabi crops are sown in winter from October to December and harvested in summer from April to June (1); Wheat, barley, peas, gram and mustard are Rabi crops (1); They are grown in the north and north-western states with winter rain (1).	1+1+1
18	Tur (arhar), urad, moong, masur, peas and gram are the main pulses (1); India is the largest producer and consumer of pulses (1); Being leguminous, they fix nitrogen and are rotated with other crops (1).	1+1+1
	OR: After independence, land reforms such as abolition of zamindari were introduced (1); Consolidation of holdings and laws on land ceilings were passed (1); These aimed at ending exploitation and making ownership equitable (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Jowar, bajra and ragi are the main millets or coarse grains (1); They are rich in nutrients, ragi in iron and calcium (1); Pulses like tur, urad and moong are major sources of protein (1); Pulses fix nitrogen and are rotated with cereals (1); India is the largest producer and consumer of pulses (1).	1+1+1+1+1
	OR: Technological reforms include HYV seeds, fertilisers and machines (1); Institutional reforms include consolidation of holdings and abolition of zamindari (1); Kisan Credit Card gives credit (1); Crop insurance protects farmers against losses (1); Minimum support price assures income (1).	1+1+1+1+1

20	Primitive subsistence farming uses simple tools on small plots (1); Intensive subsistence farming is practised in high population pressure areas (1); Commercial farming uses modern inputs for sale of crops (1); Plantation farming grows a single crop on large estates (1); Each type depends on land, climate and capital (1).	1+1+1+1+1
	OR: Bhoodan was started by Vinoba Bhave in 1951 (1); Landlords donated land to the landless (1); Gramdan was donation of whole villages (1); The movement was voluntary and partly successful (1); Land reforms through laws were also implemented (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing seasons: **rabi** (wheat, gram, mustard, barley, peas), **kharif** (rice, maize, cotton, jute, bajra, jowar) and **zaid** (watermelon, cucumber, fodder).
- Calling ragi, jowar and bajra pulses; they are **millets** (coarse grains). Pulses (tur, moong, urad, gram) fix nitrogen in the soil.
- Saying India is the largest producer of sugarcane or rice; it is the **second** largest producer of both (after Brazil and China respectively).
- Confusing **primitive subsistence** (small plots, hoe, dao; slash and burn) with **intensive subsistence** (high population pressure, high doses of inputs) and with commercial farming.
- Using **Green Revolution** (package technology for foodgrains) and **White Revolution** (Operation Flood, milk) as synonyms.
- Writing that Bhoodan was started by Gandhiji; **Vinoba Bhave** started it after Gandhiji's martyrdom.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
