ANSWER KEY & MARKING SCHEME SET 1

Chapter 9: **Agriculture (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(c)** groundnut	Sown in monsoon
2	**(b)** Kerala and Karnataka	South Indian hills
3	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
4	**(b)** wheat	Rabi crop
5	**(a)** health concerns and demand for chemical-free food	Consumer awareness
6	**(a)** Kharif sowing	Monsoon season
7	**(b)** cotton - black soil	Regur soil retains moisture
8	**(c)** gram	Gram is a legume
9	**(a)** Both A and R are true and R is the correct explanation of A.	Wheat is sown in October-December and harvested in April-June, matching the rabi season; R explains A.
10	**(b)** Both A and R are true but R is not the correct explanation of A.	Both true, but the soil requirement does not explain why jute is called the golden fibre.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Farmers borrow for inputs and crops fail or prices fall (1); They cannot repay loans and fall into distress (1).	1+1
12	Fruits and vegetables give higher income (1); They create employment and improve nutrition (1).	1+1
13	Most farming depends on monsoon rain (1); If it fails, crops fail and farmers lose income (1).	1+1
14	Export demand makes farmers shift to profitable crops (1); They may grow cash crops instead of food crops (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Cooperatives give credit and marketing to farmers (1); They help in collective bargaining (1); Dairy cooperatives show success (1).	1+1+1
16	Pulses give lower profit than wheat and rice (1); They are grown on poor land with little irrigation (1); Yields are low so supply is short of demand (1).	1+1+1
17	HYV seeds raise yield (1); Fertilisers and irrigation add nutrients and water (1); Machines save time and labour (1).	1+1+1
	OR: Fruits and vegetables earn foreign exchange (1); They give higher income to farmers (1); Exports create jobs in packing and transport (1).	1+1+1
18	Land reforms gave land to tillers (1); Cooperatives and credit helped farmers (1); But implementation has been uneven (1).	1+1+1
	OR: Heat waves and uneven rain hit crop yields (1); Floods and droughts increase (1); Farmers face greater uncertainty (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) Zaid (1). (ii) Any two of wheat, barley, peas, gram, mustard (1). (iii) Any two of rice, maize, jowar, bajra, cotton, jute, groundnut (1). (iv) Winter precipitation from western temperate cyclones helps rabi crops (1); the Green Revolution in Punjab, Haryana and western UP also boosted rabi crop growth (1).	1+1+1+2
20	Technological reforms include HYV seeds, fertilisers, pesticides, machines and irrigation, which raise yield per hectare (1); Institutional reforms include land consolidation, abolition of zamindari and land ceilings that change ownership (1); Kisan Credit Card and Personal Accident Insurance Scheme gave easy credit and insurance to farmers (1); Minimum support price and procurement assure farmers fair prices, and Operation Flood improved incomes in milk (1); Both types are needed because technology alone benefits only the better-off, while land reform alone does not raise productivity (1).	1+1+1+1+1

	OR: Types of farming include primitive subsistence (slash and burn, called jhumming in the north-east), intensive subsistence in densely populated areas, commercial farming with HYV seeds and fertilisers, and plantation farming of a single crop on large estates (1); India has three cropping seasons: Rabi (sown in winter, e.g. wheat, mustard, gram), Kharif (sown with the monsoon, e.g. rice, cotton, jute, groundnut) and Zaid (summer, e.g. watermelon and cucumber) (1); Main crops are foodgrains (rice, wheat, millets, pulses), cash crops (sugarcane, oilseeds, cotton, jute) and plantation crops (tea, coffee, rubber) (1); Rice needs temperature above 25 degrees Celsius and rain over 100 cm, wheat needs a cool growing season and 50 to 75 cm rain, and cotton grows best in black soil (1); This diversity follows variation in climate, soil, irrigation and technology across regions (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing seasons: **rabi** (wheat, gram, mustard, barley, peas), **kharif** (rice, maize, cotton, jute, bajra, jowar) and **zaid** (watermelon, cucumber, fodder).
- Calling ragi, jowar and bajra pulses; they are **millets** (coarse grains). Pulses (tur, moong, urad, gram) fix nitrogen in the soil.
- Saying India is the largest producer of sugarcane or rice; it is the **second** largest producer of both (after Brazil and China respectively).
- Confusing **primitive subsistence** (small plots, hoe, dao; slash and burn) with **intensive subsistence** (high population pressure, high doses of inputs) and with commercial farming.
- Using **Green Revolution** (package technology for foodgrains) and **White Revolution** (Operation Flood, milk) as synonyms.
- Writing that Bhoodan was started by Gandhiji; **Vinoba Bhave** started it after Gandhiji's martyrdom.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTERWI

ANSWER KEY & MARKING SCHEME SET 2

Chapter 9: **Agriculture (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
2	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
3	**(d)** the Green Revolution	HYV seeds and irrigation
4	**(b)** minimum support price	MSP
5	**(a)** dependence on moneylenders at high interest	Informal credit
6	**(c)** double cropping	Two crops in a year
7	**(d)** A is false but R is true.	A false; R true
8	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
9	**(c)** A is true but R is false.	A is true. Tea needs a warm, moist, frost-free climate with showers spread over the year, so R is false.
10	**(d)** A is false but R is true.	It uses small patches and primitive tools, so A is false; R is true.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Rice needs standing water during growth (1); This needs heavy rain or large irrigation (1).	1+1
12	Institutional credit has lower interest (1); Moneylenders charge high rates and trap farmers in debt (1).	1+1
13	It shows soil nutrients (1); Farmers can use the right fertiliser, saving money and soil (1).	1+1
14	Scattered small plots are costly to irrigate and cultivate (1); Machines cannot be used and yields stay low (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Punjab uses irrigation, HYV seeds and grows wheat and rice commercially (1); Assam gets heavy rain and grows tea and rice (1); Punjab has mechanised farms, Assam has plantations and small farms (1).	1+1+1
16	Prices fluctuate with seasons and trade (1); Stable prices help farmers plan (1); MSP and insurance reduce risk (1).	1+1+1
17	Kharif needs monsoon rain and warmth (1); Rabi needs cool winter and sunshine (1); So rice suits Kharif and wheat suits Rabi (1).	1+1+1
	OR: Middlemen take a large share (1); Storage and transport costs are high (1); Farmers get low prices while consumers pay more (1).	1+1+1
18	Canals and tube wells allowed two or three crops a year (1); Water-intensive crops such as rice spread to dry areas (1); This lowered water tables (1).	1+1+1
	OR: Cotton and jute feed textile industries (1); Sugarcane supplies sugar mills (1); Oilseeds supply oil mills (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) The White Revolution (Operation Flood) (1). (ii) To protect farmers from exploitation by speculators and middlemen (1). (iii) Kisan Credit Card or Personal Accident Insurance Scheme (1). (iv) Its benefits stayed concentrated in a few areas and it increased regional inequality (2).	1+1+1+2
20	After globalisation, cheap imports of agricultural goods compete with Indian produce, lowering prices for farmers (1); Small and marginal farmers lack resources to adapt and fall into debt (1); Export opportunities exist for rice, spices, tea and fruits, but mostly larger farmers benefit (1); Price instability makes farming risky (1); Government support through MSP, credit and technology is needed to protect farmers (1).	1+1+1+1+1

	OR: Intensive farming uses high doses of chemical fertilisers and pesticides, which reduce soil fertility over time (1); It draws heavily on groundwater, lowering water tables and causing salinity from over-irrigation (1); Monocropping reduces biodiversity and increases pests (1); It raises output in the short run but harms long-term productivity (1); Organic farming, crop rotation and soil conservation are needed to make it sustainable (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing seasons: **rabi** (wheat, gram, mustard, barley, peas), **kharif** (rice, maize, cotton, jute, bajra, jowar) and **zaid** (watermelon, cucumber, fodder).
- Calling ragi, jowar and bajra pulses; they are **millets** (coarse grains). Pulses (tur, moong, urad, gram) fix nitrogen in the soil.
- Saying India is the largest producer of sugarcane or rice; it is the **second** largest producer of both (after Brazil and China respectively).
- Confusing **primitive subsistence** (small plots, hoe, dao; slash and burn) with **intensive subsistence** (high population pressure, high doses of inputs) and with commercial farming.
- Using **Green Revolution** (package technology for foodgrains) and **White Revolution** (Operation Flood, milk) as synonyms.
- Writing that Bhoodan was started by Gandhiji; **Vinoba Bhave** started it after Gandhiji's martyrdom.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTERMIND

ANSWER KEY & MARKING SCHEME SET 3

Chapter 9: **Agriculture (Geography)** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
2	**(a)** Kharif - June-July	Kharif follows the monsoon
3	**(d)** it gives assured price and income	Cash crop
4	**(d)** high yield per unit area from small land	Labour-intensive
5	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
6	**(c)** India is the largest producer and consumer of pulses	Pulses are a protein source
7	**(a)** sugarcane	Grown in UP, Maharashtra, Karnataka
8	**(a)** loss of forest cover	Slash and burn clears forest
9	**(a)** Both A and R are true and R is the correct explanation of A.	These conditions are found in the equatorial type of climate; R explains A.
10	**(b)** Both A and R are true but R is not the correct explanation of A.	Both are true; the soil and the season are separate facts and R does not explain A.

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Cash crops reduce land for food crops (1); Food prices rise when food crops are fewer (1).	1+1
12	Women are major members of dairy cooperatives (1); Milk sales give them independent income (1).	1+1
13	It reduces dependence on one crop (1); It spreads risk and raises income (1).	1+1
14	MSP raises prices and costs the government (1); It encourages a few crops and may distort cropping patterns (1).	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Oilseeds give edible oil (1); India imports edible oil (1); Higher production saves foreign exchange (1).	1+1+1
16	They have small holdings (1); They lack irrigation, credit and markets (1); They depend on rain and moneylenders (1).	1+1+1
17	MSP gives assured prices (1); Government procurement encourages wheat and rice (1); Farmers shift from other crops (1).	1+1+1
	OR: Overuse of fertilisers harms soil (1); It pollutes water (1); Yields eventually fall (1).	1+1+1
18	The Green Revolution raised output (1); But heavy chemicals harmed soil and water (1); It widened gaps between rich and poor farmers and regions (1).	1+1+1
	OR: Plantation labour works long hours for low wages (1); Housing and facilities are poor (1); Jobs are seasonal and insecure (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	(i) Plantation farming (1). (ii) Deep, fertile, well-drained soil rich in humus (1). (iii) Any two of Assam, West Bengal, Tamil Nadu, Kerala (1). (iv) Tender leaves must be plucked by hand at regular intervals throughout the year, which needs many workers (2).	1+1+1+2
20	North India grows wheat and rice mainly in the irrigated alluvial plains of the Ganga-Satluj, with the Green Revolution concentrated in Punjab and Haryana (1); The south grows rice, millets, cotton, sugarcane and spices, with plantation crops like tea, coffee and rubber in the hills of Kerala, Karnataka and Tamil Nadu (1); Rabi crops are more important in the north because of winter rain from western disturbances (1); Soils differ: alluvial in the north and black, red and laterite in the south (1); Both regions are important for national food security (1).	1+1+1+1+1

	OR: Temperature decides the crop season and type: rice needs warmth above 25 degrees Celsius and wheat a cool winter (1); Rainfall decides whether a crop can be grown without irrigation: rice needs over 100 cm and rubber over 200 cm (1); Soil matters: alluvial soil suits wheat and sugarcane, black soil cotton and laterite tea, coffee and cashew (1); Irrigation and technology can modify these patterns, as in Punjab (1); Hence cropping patterns across India follow natural conditions as well as human inputs (1).	1+1+1+1+1

Mistakes to avoid:

- Mixing seasons: **rabi** (wheat, gram, mustard, barley, peas), **kharif** (rice, maize, cotton, jute, bajra, jowar) and **zaid** (watermelon, cucumber, fodder).
- Calling ragi, jowar and bajra pulses; they are **millets** (coarse grains). Pulses (tur, moong, urad, gram) fix nitrogen in the soil.
- Saying India is the largest producer of sugarcane or rice; it is the **second** largest producer of both (after Brazil and China respectively).
- Confusing **primitive subsistence** (small plots, hoe, dao; slash and burn) with **intensive subsistence** (high population pressure, high doses of inputs) and with commercial farming.
- Using **Green Revolution** (package technology for foodgrains) and **White Revolution** (Operation Flood, milk) as synonyms.
- Writing that Bhoodan was started by Gandhiji; **Vinoba Bhave** started it after Gandhiji's martyrdom.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
