THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET 1

Chapters 6–9: **Resources and Development (Geography), Forest and Wildlife Resources (Geography), Water Resources (Geography), Agriculture (Geography)** | Class 10 Social_Science | Maximum Marks: 50

SECTION — A (Objective Type) — Answers — 15 × 1 = 15

Q.	Correct Option	Brief Reasoning
1	**(d)** retains moisture for a long time	Its clay content holds water
2	**(c)** large-scale felling of trees for sleepers	Railways needed timber
3	**(a)** stores the scarce rain for later use	Rain falls in short spells
4	**(a)** wheat	Wheat is a cereal
5	**(b)** alluvial soil	Deposited by rivers
6	**(d)** Madhya Pradesh	About 75 per cent of its forest is permanent estate
7	**(b)** repairing leaking taps and reusing water	Reduces wastage
8	**(a)** Brazil	A cash crop
9	**(b)** manure and fertilisers	Leaching removes nutrients
10	**(d)** Indian one-horned rhinoceros	Kaziranga in Assam
11	**(a)** drip and sprinkler irrigation	Water goes directly to roots
12	**(d)** Bewar or Dahiya	Regional names differ
13	**(a)** waterlogging and salinisation	Seen in Punjab and Haryana
14	**(d)** they are found only in a limited area	Loss of that area wipes them out
15	**(d)** factories use large amounts of water and pollute it	Industries compete with farms

SECTION — B (Very Short Answer) — Answers — 5 × 2 = 10

Q.	Expected Answer / Value Points	Marks
16	Arid soils lie in hot dry areas with little vegetation (1); High temperature quickens decay, so humus content remains low (1).	1+1
17	Dams submerge forest habitats and alter river flows (1); Animals lose homes and migration routes (1).	1+1
18	Water is carried by bamboo pipes (1); It reaches plants drop by drop with little loss (1).	1+1
19	Land is scarce and population is dense (1); Farmers use family labour to get the most from small plots (1).	1+1
20	Over-irrigation raises the water table and causes waterlogging (1); Salts rise to the surface, making soil saline and infertile (1).	1+1

SECTION — C (Short Answer) — Answers — 5 × 3 = 15

Q.	Expected Answer / Value Points	Marks
21	Technology converts materials into usable resources (1); For example, hydroelectric power turned water into energy (1); Resource creation depends on technology and culture (1).	1+1+1
22	Forests absorb carbon dioxide (1); They release water vapour and influence rainfall (1); They moderate temperature and protect soil (1).	1+1+1
23	The Sardar Sarovar Dam on the Narmada would displace many tribals (1); Activists claimed rehabilitation was poor (1); Supporters said it brings water and power to Gujarat (1).	1+1+1
24	Rabi crops are sown in winter and harvested in summer (1); Kharif crops are sown with monsoon and harvested in autumn (1); Wheat is Rabi, rice is Kharif (1).	1+1+1
	OR: Tree roots bind the soil (1); Leaves and branches reduce the force of rain (1); Forests add humus and slow the flow of water (1).	1+1+1
25	Species keep the ecosystem balanced (1); Many are sources of food and medicines (1); Losing species affects other species and future generations (1).	1+1+1
	OR: Gendathur in Mysuru district has rooftop harvesting by households (1); About 200 houses have the system (1); Water meets domestic needs and recharges wells (1).	1+1+1

SECTION — D (Long Answer) — Answers

2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
26	Land is used for forests, farming, pasture and non-agricultural uses (1); Some is barren or wasteland (1); India has a large population on a small land share (1); This increases pressure on land (1); Planning is needed to balance uses and conserve soil (1).	1+1+1+1+1
	OR: Villagers in Alwar protected their forest as Bhairodev Dakav 'Sonchuri' (1); Sacred groves are protected for religious reasons (1); Chipko and Beej Bachao were people's movements (1); JFM involves villagers and forest officials (1); Community care strengthens conservation (1).	1+1+1+1+1
27	Dams displace people and submerge land (1); Locals felt ignored in planning (1); Narmada Bachao Andolan opposed the Sardar Sarovar Dam (1); Protests also arose against Tehri dam (1); Movements demanded rehabilitation and review (1).	1+1+1+1+1
	OR: Tea needs warm, moist, frost-free climate in Assam, Darjeeling and the south (1); Coffee grows in Karnataka, Kerala and Tamil Nadu (1); Rubber needs over 200 cm rain and grows in Kerala (1); They earn export income (1); They give jobs to plantation labourers (1).	1+1+1+1+1

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTERMIND

THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET 2

Chapters 6–9: **Resources and Development (Geography), Forest and Wildlife Resources (Geography), Water Resources (Geography), Agriculture (Geography)** | Class 10 Social_Science | Maximum Marks: 50

SECTION — A (Objective Type) — Answers — 15 × 1 = 15

Q.	Correct Option	Brief Reasoning
1	**(d)** slash and burn (shifting) cultivation	Practised in north-east India
2	**(c)** forests	Forests regenerate
3	**(c)** forests gave them water, fuel and fodder for survival	They declared the Bhairodev Dakav 'Sonchuri'
4	**(d)** to irrigate crops and store water	Agricultural prosperity
5	**(a)** land ownership was highly unequal	Landless poor
6	**(d)** mining	Mining leaves deep scars
7	**(b)** the rich biodiversity	Mining clears forests and pollutes
8	**(c)** block the natural flow of the river	Fish cannot move upstream to spawn
9	**(a)** jute	Grown in West Bengal and Assam
10	**(b)** a developed resource	Quality and quantity are known
11	**(c)** Madhya Pradesh	It is a tiger reserve
12	**(c)** it is a renewable but limited resource	Fresh water is limited
13	**(a)** plantation farming	Large estate of a single crop
14	**(a)** shelter belts	Rows of trees check wind
15	**(c)** loss of habitat for wildlife	Expansion of agriculture reduced forests

SECTION — B (Very Short Answer) — Answers — 5 × 2 = 10

Q.	Expected Answer / Value Points	Marks
16	They show which species are in most danger (1); This helps decide which species to protect first (1).	1+1
17	They draw attention to displacement and ecological costs (1); They push for better planning and resettlement (1).	1+1
18	MSP assures a minimum price to farmers (1); Credit helps them buy inputs and avoid moneylenders (1).	1+1
19	Resources are unevenly distributed across regions (1); Planning ensures balanced use and avoids depletion (1).	1+1
20	People protect these groves for religious reasons (1); Rare plants and animals survive within them (1).	1+1

SECTION — C (Short Answer) — Answers — 5 × 3 = 15

Q.	Expected Answer / Value Points	Marks
21	Scattered plots are joined into compact holdings (1); It saves time and cost (1); It allows machines and irrigation (1).	1+1+1
22	It must be technologically accessible (1); It must be economically feasible to use (1); It must be culturally acceptable (1).	1+1+1
23	Reserved forests are permanently protected, over half of forest area (1); Protected forests are guarded from further depletion, about one-third (1); Reserved forests are more strictly protected, with no grazing or hunting (1).	1+1+1
24	Industries can treat and reuse water (1); This reduces fresh water demand (1); Less waste is released into rivers (1).	1+1+1
	OR: Punjab has fertile plains but low rain (1); Canals and tube wells provide irrigation (1); This supports wheat and rice in the Green Revolution (1).	1+1+1
25	Gandhi warned against greed and exploitative technology (1); Sustainable development also requires restraint in use (1); Both want resources to be conserved for future generations (1).	1+1+1
	OR: JFM started in Odisha in 1988 (1); Villagers protect degraded forest land (1); They get a share of the produce (1).	1+1+1

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
26	Resources are not natural alone; human skills and technology make them (1); Water became useful for hydroelectricity with technology (1); Culture decides what is acceptable (1); Without human effort, materials remain only potential (1); So resources are functional and humans are the key (1).	1+1+1+1+1

	OR: Forests give timber, food, medicines and fuel (1); They protect soil and water (1); They maintain climate and rainfall (1); Wildlife keeps the ecological balance (1); Tourism and forest produce give income (1).	1+1+1+1+1
27	Policy can regulate use and promote harvesting (1); Tamil Nadu's law is an example (1); Technology like drip irrigation saves water (1); Recycling reduces demand (1); Both are needed together (1).	1+1+1+1+1
	OR: Horticulture gives higher income than grains (1); India grows many fruits and vegetables (1); Dairying under Operation Flood raised milk output (1); Both give jobs to rural people (1); They improve nutrition (1).	1+1+1+1+1

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTERMIND

THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET 3

Chapters 6–9: **Resources and Development (Geography), Forest and Wildlife Resources (Geography), Water Resources (Geography), Agriculture (Geography)** | Class 10 Social_Science | Maximum Marks: 50

SECTION — A (Objective Type) — Answers — 15 × 1 = 15

Q.	Correct Option	Brief Reasoning
1	**(d)** Tamil Nadu	A model for others
2	**(d)** intensive subsistence farming	Seen in areas of high population pressure
3	**(c)** bhangar	Older alluvium
4	**(b)** Andaman wild pig	Found only in the Andaman Islands
5	**(d)** makes water unfit for use	Industrial and domestic waste
6	**(b)** tea - Assam	Assam is a major tea state
7	**(a)** slowing the flow of water and checking soil loss	Contour ploughing decelerates water
8	**(b)** Periyar	Periyar Tiger Reserve
9	**(c)** community water management	Villagers manage it
10	**(c)** cotton	Black cotton soil
11	**(b)** it contains living organisms and supports plant life	Soil is a mixture of minerals, humus and organisms
12	**(b)** extinct	They are not found in places they were known to live
13	**(b)** multiple cropping with irrigation	Green Revolution areas
14	**(d)** donate part of their land to the landless	A voluntary land gift
15	**(d)** black soil	Formed from volcanic rock

SECTION — B (Very Short Answer) — Answers — 5 × 2 = 10

Q.	Expected Answer / Value Points	Marks
16	They use local materials and rain (1); They avoid displacement and damage to ecology (1).	1+1
17	Pulses fix atmospheric nitrogen (1); This restores soil fertility for the next crop (1).	1+1
18	Mining removes vegetation and leaves deep scars on land (1); Dust and waste pollute the soil, causing degradation (1).	1+1
19	Poaching is organised and profitable because of high prices for skins and bones (1); Forests are large and hard to guard (1).	1+1
20	Rivers flow through many states (1); A dam in one state reduces flow for others, leading to demands over shares (1).	1+1

SECTION — C (Short Answer) — Answers — 5 × 3 = 15

Q.	Expected Answer / Value Points	Marks
21	Rulers built dams, lakes and canals (1); Chandragupta Maurya's time saw many irrigation works (1); Bhopal Lake and other tanks stored water (1).	1+1+1
22	Plantation crops need large estates and capital (1); They are processed near the estate (1); They are mainly for export or industry (1).	1+1+1
23	Some states are rich in minerals but poor in infrastructure, like Jharkhand (1); Some are rich in water but lack capital, and some have strong agriculture but few minerals (1); Unequal development results, so planning is needed (1).	1+1+1
24	Loss of habitat leaves species without food and shelter (1); Small and isolated populations die out (1); Endemic species are especially at risk (1).	1+1+1
	OR: Sedimentation is the deposit of silt in a reservoir (1); It reduces storage capacity (1); It lowers irrigation and power output and increases flood risk (1).	1+1+1
25	Insurance pays farmers in case of crop failure (1); It reduces risk from drought and floods (1); It helps them repay loans (1).	1+1+1
	OR: First, resources are identified and inventoried by surveying (1); Second, a planning structure with technology and institutions is evolved (1); Third, plans are matched with national plans, e.g., for planning irrigation in a state (1).	1+1+1

SECTION — D (Long Answer) — Answers

2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
26	Forest roots bind soil (1); Canopy reduces the impact of rain (1); Leaf litter adds humus and slows flow (1); Vegetation checks wind (1); Afforestation and shelter belts conserve soil (1).	1+1+1+1+1
	OR: Reserved forests cover over half the forest area (1); Protected forests cover about one-third (1); Both are permanent forest estates owned by the government (1); Unclassed forests are owned by government, individuals and communities (1); Madhya Pradesh has the largest permanent area (1).	1+1+1+1+1
27	Rajasthan has tankas, johads and khadis (1); Meghalaya has bamboo drip irrigation (1); Himalayas have guls or kuls (1); Bengal had inundation channels (1); Karnataka's Gendathur and Shillong use rooftop harvesting (1).	1+1+1+1+1
	OR: The Green Revolution raised wheat and rice output (1); India became self-sufficient in foodgrains (1); But gains were confined to a few states (1); Chemical overuse damaged soil and water (1); Small farmers could not afford inputs (1).	1+1+1+1+1

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
