THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET 1

Chapters 6–9: **Resources and Development (Geography), Forest and Wildlife Resources (Geography), Water Resources (Geography), Agriculture (Geography)** | Class 10 Social_Science | Maximum Marks: 50

SECTION — A (Objective Type) — Answers — 15 × 1 = 15

Q.	Correct Option	Brief Reasoning
1	**(b)** identification and inventory by surveying and mapping	Counting what exists
2	**(d)** Odisha in 1988	State resolution of 1988
3	**(c)** A is true but R is false.	A true; R false
4	**(d)** groundnut	Sown in monsoon
5	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
6	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
7	**(a)** reduced storage capacity	Sediment fills the reservoir
8	**(b)** Kerala and Karnataka	South Indian hills
9	**(c)** terrace farming	Terraces slow the water
10	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
11	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
12	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
13	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
14	**(a)** sacred grove	Religious protection
15	**(a)** Tehri dam	In Uttarakhand

SECTION — B (Very Short Answer) — Answers — 5 × 2 = 10

Q.	Expected Answer / Value Points	Marks
16	Soil supports plant growth and forms the basis of agriculture (1); It provides nutrients, water and a home to living things (1).	1+1
17	Roots hold soil and prevent erosion (1); Forests absorb rain and release water slowly (1).	1+1
18	They change river flow and trap silt (1); They block fish migration and flood forests (1).	1+1
19	Farmers borrow for inputs and crops fail or prices fall (1); They cannot repay loans and fall into distress (1).	1+1
20	Technology can exploit resources faster than they renew (1); Without care it leads to depletion and pollution (1).	1+1

SECTION — C (Short Answer) — Answers — 5 × 3 = 15

Q.	Expected Answer / Value Points	Marks
21	Overgrazing strips the vegetation (1); Over-irrigation causes salinity (1); Excess chemicals damage soil life (1).	1+1+1
22	Laws like the 1972 Act protect species and habitats (1); Communities guard forests and sacred groves (1); Together they strengthen conservation (1).	1+1+1
23	People need water as a right (1); Disputes arise over who controls it (1); Fair access should be ensured for all (1).	1+1+1
24	Cooperatives give credit and marketing to farmers (1); They help in collective bargaining (1); Dairy cooperatives show success (1).	1+1+1
	OR: On hills, terraces and contour ploughing check run-off (1); On plains, strip cropping and shelter belts check wind and water (1); Afforestation helps in both (1).	1+1+1
25	Tigers need large forests and prey (1); Rhinos live in grasslands such as Kaziranga (1); Both face poaching but laws and reserves protect them (1).	1+1+1

	OR: The law made rooftop harvesting compulsory (1); Strict enforcement and awareness helped (1); Groundwater levels rose in Chennai and other places (1).	1+1+1

SECTION — D (Long Answer) — Answers

2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
26	Resources are unevenly distributed in India, so planning at national, state, regional and local levels is necessary (1); The first stage of planning is identification and inventory of resources through surveying, mapping and qualitative and quantitative estimation (1); The second stage is evolving a planning structure endowed with appropriate technology, skill and institutional set-up, and the third is matching resource development plans with the overall national development plans (1); Regional examples show the imbalance: Jharkhand, Chhattisgarh and Madhya Pradesh are rich in minerals but poor in infrastructure, Arunachal Pradesh has water but lacks infrastructure, and Rajasthan has solar and wind energy but little water (1); Planning has helped to some extent, but regional imbalance persists, so it must be backed by investment, technology and fair sharing of benefits (1).	1+1+1+1+1
	OR: The Indian Wildlife (Protection) Act of 1972 banned hunting, protected habitats, restricted trade in wildlife and listed protected species (1); It set up national parks and sanctuaries and provided for all-India lists of protected species, with Project Tiger launched in 1973 (1); Project Tiger created tiger reserves such as Corbett, Sunderbans, Bandhavgarh, Sariska, Manas and Periyar (1); It has helped tigers survive in protected habitats, but poaching, shrinking habitat and conflict with villagers continue (1); Effectiveness therefore depends on enforcement and community cooperation (1).	1+1+1+1+1
27	Multipurpose projects store water behind dams for irrigation, hydroelectric power, water supply and flood control, as at Bhakra-Nangal on the Sutlej and Hirakud on the Mahanadi (1); Jawaharlal Nehru called dams the temples of modern India because they promised agricultural and industrial growth (1); The costs include displacement of people and submergence of forests and farmland, as in the Narmada project (1); Sedimentation reduces the storage capacity, and dams alter river flow and block fish movement (1); Dams may also cause floods downstream and inter-state disputes, so careful planning and resettlement are needed (1).	1+1+1+1+1
	OR: The Green Revolution of the 1960s introduced HYV seeds, chemical fertilisers and assured irrigation, raising wheat and rice output and making India self-sufficient in foodgrains (1); The gains were concentrated in Punjab, Haryana and western Uttar Pradesh, where irrigation was available (1); Other regions and crops such as pulses lagged behind, widening regional disparities (1); Small farmers could not afford inputs, so inequality grew (1); Heavy use of chemicals and groundwater has harmed soil and water, so sustainability is questioned (1).	1+1+1+1+1

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTER

ANSWER KEY & MARKING SCHEME SET 2

Chapters 6–9: **Resources and Development (Geography), Forest and Wildlife Resources (Geography), Water Resources (Geography), Agriculture (Geography)** | Class 10 Social_Science | Maximum Marks: 50

SECTION — A (Objective Type) — Answers — 15 × 1 = 15

Q.	Correct Option	Brief Reasoning
1	**(a)** wheat	Rabi crop
2	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
3	**(b)** treating forests mainly as sources of timber and revenue	Railways and ships needed timber
4	**(c)** rainwater harvesting	Harvesting adds supply
5	**(d)** health concerns and demand for chemical-free food	Consumer awareness
6	**(a)** laterite - alluvial deposits of rivers	Laterite is formed by leaching
7	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
8	**(d)** A is false but R is true.	A false; R true
9	**(c)** Kharif sowing	Monsoon season
10	**(b)** laterite soil	Leached of nutrients
11	**(d)** A is false but R is true.	A false; R true
12	**(c)** local rainwater harvesting	Locally suited
13	**(c)** cotton - black soil	Regur soil retains moisture
14	**(d)** A is false but R is true.	A false; R true
15	**(d)** A is false but R is true.	A false; R true

SECTION — B (Very Short Answer) — Answers — 5 × 2 = 10

Q.	Expected Answer / Value Points	Marks
16	Tigers keep prey populations in balance (1); Their presence shows a healthy forest (1).	1+1
17	Water is scarce (1); Efficient methods reduce wastage and make water available for more users (1).	1+1
18	Fruits and vegetables give higher income (1); They create employment and improve nutrition (1).	1+1
19	It causes waterlogging and brings salts to the surface (1); The soil becomes saline and loses fertility, as in Punjab and Haryana (1).	1+1
20	Local people have a stake in the forest (1); They make rules and monitor use (1).	1+1

SECTION — C (Short Answer) — Answers — 5 × 3 = 15

Q.	Expected Answer / Value Points	Marks
21	Pulses give lower profit than wheat and rice (1); They are grown on poor land with little irrigation (1); Yields are low so supply is short of demand (1).	1+1+1
22	Mining degrades land in Jharkhand (1); Overgrazing damages land in Gujarat and Rajasthan (1); Over-irrigation causes salinity in Punjab and Haryana (1).	1+1+1
23	Tribes gather honey, fruit, bamboo and medicines (1); Forest produce is sold for income (1); Forests supply fuel and fodder (1).	1+1+1
24	Tankas store water in dry areas (1); Kuls use mountain streams (1); Inundation channels use floods (1).	1+1+1
	OR: HYV seeds raise yield (1); Fertilisers and irrigation add nutrients and water (1); Machines save time and labour (1).	1+1+1
25	Gandhi's quote warns against greed (1); Overuse of resources today causes depletion (1); It supports sustainable use for the future (1).	1+1+1
	OR: Forests absorb carbon dioxide and release oxygen (1); They clean the air (1); This is why they are called the lungs of the earth (1).	1+1+1

SECTION — D (Long Answer) — Answers

2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
26	India has tried to balance development and conservation through resource planning, afforestation, soil conservation and the Rio commitment to sustainable development (1); Regional imbalance remains, as mineral-rich states stay poor and mining has degraded land (1); Overgrazing, over-irrigation and industrial waste continue to damage land in several states (1); Conservation measures such as shelter belts and terracing are applied unevenly (1); A balanced policy needs stronger enforcement, local participation and use of technology that conserves resources (1).	1+1+1+1+1
	OR: Everyone depends on forests and wildlife for air, water, food and a stable ecosystem (1); The government makes laws, creates reserves and runs conservation programmes (1); Local communities guard forests and sacred groves and use produce responsibly (1); Citizens can avoid buying wildlife products, plant trees and report poaching (1); Conservation succeeds only when state, community and citizens act together (1).	1+1+1+1+1
27	Development needs water for farming, industry and cities, but overuse harms rivers and aquifers (1); Planning should assess environmental and social costs of projects before they are built (1); Rainwater harvesting, recycling and efficient irrigation reduce demand (1); Affected people must be consulted and compensated (1); Regulation of groundwater and community participation protect resources for the future (1).	1+1+1+1+1
	OR: Agriculture employs about two-thirds of India's population and supplies food and raw materials (1); Rural incomes support demand for industrial goods (1); Its share in GDP has fallen as industry and services grew faster (1); Industry and services give higher incomes but still depend on farm output (1); So prosperity depends on balanced growth, with agriculture strengthened rather than neglected (1).	1+1+1+1+1

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

MASTERMIND

ANSWER KEY & MARKING SCHEME SET 3

Chapters 6–9: **Resources and Development (Geography), Forest and Wildlife Resources (Geography), Water Resources (Geography), Agriculture (Geography)** | Class 10 Social_Science | Maximum Marks: 50

SECTION — A (Objective Type) — Answers — 15 × 1 = 15

Q.	Correct Option	Brief Reasoning
1	**(a)** water is a limited resource	The usable share is small
2	**(b)** gram	Gram is a legume
3	**(b)** soil erosion	Vegetation cover is lost
4	**(d)** 1,827 in 1973	Led to Project Tiger
5	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
6	**(b)** crop rotation	Alternating crops
7	**(b)** degradation and depletion	Misuse harms resources
8	**(d)** A is false but R is true.	A false; R true
9	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
10	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
11	**(c)** careful resource planning	Balanced development
12	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
13	**(c)** submerge forests and affect fish and river flow	Environmental cost
14	**(a)** Both A and R are true and R is the correct explanation of A.	Both true; R explains A
15	**(d)** regur soil - cotton	Black soil retains moisture

SECTION — B (Very Short Answer) — Answers — 5 × 2 = 10

Q.	Expected Answer / Value Points	Marks
16	Crops need regular water (1); Scarcity lowers yields and income, and forces farmers to deepen wells (1).	1+1
17	Most farming depends on monsoon rain (1); If it fails, crops fail and farmers lose income (1).	1+1
18	Pastures there are limited and dry (1); Large herds graze for long on the same land and strip it bare (1).	1+1
19	Villagers protect forests and benefit from produce (1); Degraded forests have recovered (1).	1+1
20	Silt reduces storage so floods spill over (1); Sudden release of water from full dams floods downstream areas (1).	1+1

SECTION — C (Short Answer) — Answers — 5 × 3 = 15

Q.	Expected Answer / Value Points	Marks
21	Benefits of dams reach some regions only (1); Displaced people may not gain (1); Inequalities between regions can grow (1).	1+1+1
22	Fruits and vegetables earn foreign exchange (1); They give higher income to farmers (1); Exports create jobs in packing and transport (1).	1+1+1
23	India has a large population on a small land share (1); Pressure on land leads to more intensive use and degradation (1); Land-use planning is needed for food and development (1).	1+1+1
24	Categories identify species at risk (1); Policies prioritise endangered ones (1); They help plan protection and monitoring (1).	1+1+1
	OR: It uses local bamboo and spring water (1); Water is delivered drop by drop (1); It needs no energy and wastes little (1).	1+1+1
25	Land reforms gave land to tillers (1); Cooperatives and credit helped farmers (1); But implementation has been uneven (1).	1+1+1

	OR: It is fertile with minerals (1); It lies in plains with rivers and irrigation (1); It supports intensive farming that feeds large populations (1).	1+1+1

SECTION — D (Long Answer) — Answers

2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
26	Land degradation results from mining (Jharkhand, Chhattisgarh, Madhya Pradesh, Odisha), overgrazing (Gujarat, Rajasthan, Madhya Pradesh, Maharashtra) and over-irrigation (Punjab, Haryana, western Uttar Pradesh) (1); Mining leaves deep scars after the removal of vegetation, and mineral processing creates dust that settles on the land and slows infiltration of water (1); Over-irrigation causes waterlogging that increases salinity and alkalinity of the soil (1); Industrial effluents and waste also pollute land and water (1); Remedies include afforestation, proper management of grazing, planting shelter belts, stabilising sand dunes with thorny bushes, controlling mining and treating industrial effluents before discharge (1).	1+1+1+1+1
	OR: Villagers in Sariska, Alwar, Rajasthan, declared 1,200 hectares of forest as the Bhairodev Dakav 'Sonchuri' and made their own rules against hunting (1); Joint Forest Management began in Odisha in 1988, with local communities protecting degraded forest and sharing the produce (1); The Chipko movement in the Himalayas saved forests when villagers, especially women, hugged trees (1); The Beej Bachao Andolan in Tehri conserved traditional seeds and crop diversity (1); Sacred groves, protected for religious reasons, show that communities can conserve cheaply and effectively (1).	1+1+1+1+1
27	Sringaverapura near Allahabad had a sophisticated system to channel the floodwaters of the Ganga (1); During Chandragupta Maurya's time, dams, lakes and irrigation systems were built extensively (1); Evidence of irrigation works has been found in Kalinga (Odisha), Nagarjunakonda (Andhra Pradesh), Bennur (Karnataka) and Kolhapur (Maharashtra) (1); In the eleventh century, Bhopal Lake was one of the largest artificial lakes of its time (1); In the fourteenth century, the tank at Hauz Khas in Delhi was built to supply water to the Siri Fort area (1).	1+1+1+1+1
	OR: Technological reforms include HYV seeds, fertilisers, pesticides, machines and irrigation, which raise yield per hectare (1); Institutional reforms include land consolidation, abolition of zamindari and land ceilings that change ownership (1); Kisan Credit Card and Personal Accident Insurance Scheme gave easy credit and insurance to farmers (1); Minimum support price and procurement assure farmers fair prices, and Operation Flood improved incomes in milk (1); Both types are needed because technology alone benefits only the better-off, while land reform alone does not raise productivity (1).	1+1+1+1+1

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
