Mistakes to avoid:

- Mixing up the instruments: **thermometer** - temperature, **rain gauge** - rainfall, **barometer** - pressure, **wind vane** - direction.
- Using the wrong formula for mean daily temperature; it is **(maximum + minimum) / 2**, not the difference.
- Writing that wind blows from low to high pressure; it blows from **high to low pressure**.
- Confusing weather with climate; weather is the **day-to-day** state of the atmosphere, climate is the long-term pattern.
- Forgetting the units: rainfall in **mm**, temperature in **degrees C**, pressure in **millibars**.
- Stating that clothes dry faster in high humidity; they dry faster when humidity is **low**.

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
