THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 7 — SOCIAL SCIENCE · HARD LEVEL CHAPTER TEST SET 1

Chapter 3: **Climates of India** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. A town at 2,000 m altitude has a mean temperature of 14 degrees C. A town at sea level at the same latitude is likely about 1

(a) 27 degrees C **(b)** 40 degrees C **(c)** 14 degrees C **(d)** 1 degree C

2. The reason a location at the Equator is not the hottest place on Earth is 1

(a) it is at altitude **(b)** there is no land

(c) cloud cover and rainfall reduce heating **(d)** the sun does not shine

3. Which is more effective in cyclone mitigation? 1

(a) building along beaches **(b)** mangrove forests and early warnings

(c) ignoring alerts **(d)** cutting coastal forests

4. If a city's annual temperature range is 4 degrees C, it is most likely 1

(a) in the desert **(b)** in Siberia

(c) on the coast near the Equator **(d)** in the Himalaya

5. Climate change is likely to make the monsoon 1

(a) more erratic with intense spells **(b)** perfectly steady

(c) cooler **(d)** non-existent

6. If the sea were not near Mumbai, its summer temperatures would probably 1

(a) remain same **(b)** become zero

(c) fall **(d)** rise and range increase

7. If the south-west monsoon is late by three weeks, kharif sowing will be 1

(a) doubled **(b)** earlier **(c)** unaffected **(d)** delayed

8. Which pair describes a correct cause-effect? 1

(a) high pressure over the sea in summer - heavy snowfall

(b) high pressure over land in winter - dry winds from land

(c) low pressure in winter - monsoon

(d) low pressure over sea in summer - snow

9. **Assertion (A):** Temperature decreases as altitude increases. 1

Reason (R): Temperature falls by about 6.5 degrees C for every 1,000 m of height.

Choose the correct option:

(a) Both A and R are true and R is the correct explanation of A.

(b) Both A and R are true but R is not the correct explanation of A.

(c) A is true but R is false.

(d) A is false but R is true.

10. **Assertion (A):** The Deccan interior behind the Western Ghats receives less rain. 1
Reason (R): It lies in the rain shadow of the Western Ghats.
Choose the correct option:
(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why does the climate vary even at the same latitude? 2

12. How do mangroves protect the coast? 2

13. How does altitude change vegetation? 2

14. How does the monsoon unite India's agriculture? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Evaluate how the monsoon decides India's economy. 3

16. Examine why monsoon forecasts affect markets. 3

17. Examine why high-rise urban areas modify local winds. 3

OR

Analyse the causes of the Thar's aridity. 3

18. Explain how the location of the Himalayas makes them a climatic barrier. 3

OR

Assess how climate affects health. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. **Case study.** Rohan travels from Shimla at 2,000 m above sea level to a town in the plains at about sea level. In Shimla the morning temperature was 10 degrees C. He notices that in the plains it is much warmer, though both places lie in the same region. 5
(i) What happens to temperature as altitude increases?
(ii) By roughly how many degrees C does it fall per 1,000 m?
(iii) Which place is likely to be colder, Shimla or the plains town?
(iv) Calculate the expected fall in temperature between the plains town and Shimla, and say why this explains Rohan's observation.

20. Examine the monsoon system, its variability and its consequences for farmers and cities. 5

OR

Analyse how climate change threatens India's agriculture and coasts. 5

END OF QUESTION PAPER — Total: 40 Marks
