The Sun is a huge ball of hot gas. It is much bigger than the Earth. It looks small because it is very far away from us. The light of the Sun takes about eight minutes to reach the Earth.

The Sun gives us heat and light. Without it, the Earth would be dark and cold, and nothing could live here. Plants use sunlight to make their food. Animals and people eat plants or other animals that eat plants. So the Sun is the source of energy for all living things.
