Honeybees

A honeybee is a tiny insect, but it works harder than almost any other creature. A single hive may hold thousands of bees, and each one has a job. The queen bee lays eggs. The worker bees, all of them female, collect nectar, make honey, clean the hive and guard the entrance. The male bees, called drones, have only one task: to mate with the queen.

When a worker finds a field full of flowers, she returns to the hive and performs a special dance. By moving in circles and wiggles, she tells the other bees where the flowers are and how far they lie. Scientists were amazed when they discovered this ‘language of dance’.

Bees are also very important to us. As they move from flower to flower, they carry pollen, which helps plants to make fruits and seeds. Without bees, many of the fruits and vegetables we eat would become rare. That is why farmers welcome bees to their fields, and why we should never destroy a hive without need.

The Lost Kite

Dev had been working on his kite for three days. It was red with a long yellow tail, and he had drawn a smiling sun on it. On Sunday morning he climbed to the roof with his younger sister Tara and let the string run through his fingers. The kite rose higher and higher until it became a tiny red dot in the blue sky.

Suddenly a gust of wind snapped the string. The kite spun away over the rooftops and disappeared behind the old water tank. Dev's face fell. 'All that work!' he sighed. Tara held his hand. 'Let's go and look for it,' she said.

They searched the lane, the park and the market. At last, near the temple, they saw a small boy holding a red kite and looking at it with shining eyes. Dev was about to ask for it back, but then he noticed the boy's torn shirt and bare feet. He smiled and said, 'It is a lovely kite, isn't it? Keep it.' The boy's face lit up. On the way home Dev felt lighter than any kite.
