# THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

## CLASS 6 — SCIENCE CHAPTER TEST SET B

Chapter 7: **Temperature and its Measurement** | RBSE Pattern | Session 2026–27

**Time: 1 Hour 30 Minutes** Name: _____ Roll No.: _____ **Maximum Marks: 40**

**General Instructions:**

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Draw neat, labelled diagrams wherever required.

## SECTION — A (Objective Type Questions) 10 × 1 = 10

*Choose the correct option and write it in your answer book.*

**1.** Temperature is measured with a: 1

**(a)** spring balance **(b)** stopwatch **(c)** barometer **(d)** thermometer

**2.** The freezing (melting) point of ice is: 1

**(a)** 100 °C **(b)** −10 °C **(c)** 0 °C **(d)** 37 °C

**3.** A laboratory thermometer typically measures from: 1

**(a)** 200 °C to 300 °C **(b)** 35 °C to 42 °C **(c)** 0 °C to 5 °C **(d)** −10 °C to 110 °C

**4.** The bulb of a thermometer is: 1

**(a)** the reservoir holding the liquid **(b)** the glass cover
**(c)** the top **(d)** the scale

**5.** A clinical thermometer should NOT be used to measure the temperature of: 1

**(a)** a healthy person **(b)** boiling water
**(c)** a person with fever **(d)** a child

**6.** Which of these has the highest temperature? 1

**(a)** Fridge water **(b)** Room-temperature water
**(c)** Ice **(d)** Boiling water

**7.** A fever means body temperature is: 1

**(a)** lower than normal **(b)** exactly normal
**(c)** higher than normal **(d)** zero

**8.** A thermometer reading of 25 °C most likely represents: 1

**(a)** freezing water **(b)** body of a fever patient
**(c)** room temperature **(d)** boiling water

**9.** To measure room temperature we use a: 1

**(a)** ruler **(b)** balance
**(c)** clinical thermometer **(d)** laboratory/room thermometer

**10.** A wooden spoon in hot tea stays cooler because wood is: 1

**(a)** a good conductor **(b)** a poor conductor of heat
**(c)** transparent **(d)** magnetic

## SECTION — B (Very Short Answer Type) — 4 × 2 = 8

*Answer in about 10–15 words each.*

**11.** Why is the sense of touch not reliable to measure temperature? 2

**12.** What is the use of the kink in a clinical thermometer? 2

**13.** Why should the bulb of a laboratory thermometer not touch the bottom of the beaker? 2

**14.** What is the range of a clinical thermometer? 2

## SECTION — C (Short Answer Type) — 4 × 3 = 12

*Answer in about 30–40 words each.*

**15.** A person has body temperature 38.5 °C. Is it normal? Explain and suggest what to do. 3

**16.** Why does a metal spoon get hot quickly in hot tea but a wooden spoon does not? 3

**17.** Describe an activity to measure the temperature of water in a glass at different times as it cools. 3

OR

Why is the reading of a thermometer taken without removing the bulb from the liquid? 3

**18.** What is the lowest and highest temperature on a laboratory thermometer? Why does it have such a range? 3

OR

Why do we shake the clinical thermometer before use? 3

## SECTION — D (Long Answer Type) — 2 × 5 = 10

*Answer in about 80–100 words each.*

**19.** (i) Explain how a thermometer works. 5
(ii) Why is mercury or coloured alcohol used?
(iii) What is the effect of heating on the liquid?

OR

**Case study:** Ice in a beaker with a thermometer: reading is 0 °C even when heated until all ice melts. 5
(i) What is the reading?
(ii) Why?
(iii) What happens next?
(iv) Boiling point?

**20.** (i) State the precautions for using a laboratory thermometer. 5
(ii) How to read the scale.
(iii) What errors may occur?

OR

(i) Plot a table: time (min) 0, 5, 10, 15, 20 with temperature 80, 65, 54, 46, 40 °C. 5
(ii) What do you notice?
(iii) Why does it cool?

## END OF QUESTION PAPER — Total: 40 Marks
