CLASS 8 — SCIENCE CHAPTER TEST SET B

Chapter 1: **Exploring the Investigative World of Science** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Draw neat, labelled diagrams wherever required.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Changing only one thing at a time while keeping other conditions the same is called a: 1

(a) fair (controlled) test **(b)** guess
(c) survey **(d)** random test

2. A yes/no observation in the puri study is: 1

(a) oil volume in mL **(b)** mass of dough in grams
(c) whether the puri puffs up **(d)** time in seconds

3. After one round of experiments, a good scientist usually: 1

(a) hides the result **(b)** asks new questions
(c) destroys the notes **(d)** stops thinking

4. Which of these is NOT a good scientific question? 1

(a) Does oil volume change frying time? **(b)** Which colour is the nicest?
(c) Does flour type matter? **(d)** How does temperature affect puffing?

5. In Grade 7 the book showed that science: 1

(a) is only facts **(b)** keeps evolving with new ideas
(c) is only memory **(d)** never changes

6. Calendars arose from observing: 1

(a) only markets **(b)** cycles of the Sun and Moon
(c) only rainfall **(d)** only school terms

7. The final chapter of the book is about: 1

(a) why Earth is just right for life **(b)** only algebra
(c) only chemistry **(d)** only history

8. Scientists studying whether the world is getting warmer rely on: 1

(a) luck **(b)** rumours
(c) observation, measurement and experiment **(d)** opinions only

9. Time to puff is best measured with a: 1

(a) thermometer **(b)** spring balance **(c)** ruler **(d)** stopwatch

10. When a scientist asks ‘What happens if I change this?’, she is: 1

(a) memorising **(b)** ending an investigation
(c) writing a poem **(d)** starting an investigation

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 10–15 words each.

11. Why should notes be kept during an experiment? 2

12. What is meant by systematic investigation? 2

13. Name two instruments you would use in a puri-frying investigation and what each measures. 2

14. Why should dough circles be of the same thickness while testing oil temperature? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 30–40 words each.

15. A student fries puris in three trials with oil at three temperatures and the same dough. 3
(i) What is the variable?
(ii) What are the fixed factors?
(iii) Give one result she may record.

16. Why do scientists keep asking new questions after an answer? 3

17. Write any three qualities of a scientific attitude. 3

OR

Explain why the puffing of a puri is said to be 'not completely understood'. 3

18. Name three topics that the book says Grade 8 will explore and say one link between any two. 3

OR

Why does the chapter say 'science is everywhere'? 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 80–100 words each.

19. A class tests whether dough thickness changes puffing. 5
(i) Name the variable.
(ii) Name two fixed factors.
(iii) Name two observations.
(iv) Suggest a safe way to conduct the test.
(v) Write one new question that may arise.

OR

Distinguish between variables we change, variables we measure and variables we keep fixed, with examples from a plant-growth investigation. 5

20. Write a short account of how the Grade 8 book links the topics of light, calendars, ecosystems and Earth. 5

OR

Why is recording observations important? Describe what a good record of the puri experiment would include. 5

END OF QUESTION PAPER — Total: 40 Marks

MINDWINNER
