THE MASTERMIND COACHING CLASSES

Revision Notes

Class 9 · Social Science

Exploring Society: India and Beyond — Part 2, Chapters 9 to 14 · CBSE / RBSE Syllabus

HOW TO USE THESE NOTES

Each chapter follows the textbook's own order of sections, so you can read straight through. Bold words are keywords you must be able to define. Tables compare and classify; shaded boxes hold definitions, formulas and key facts. The navy Key Takeaways box at the end of every chapter is your last-two-minutes revision.

CH.	CHAPTER TITLE	CORE THEME
9	Oceans and Life	Ocean relief, waves, tides, currents, early warning, marine resources and maritime zones
10	Life on Earth	Biomes, biodiversity, forests and livelihoods, GI products, community rights and ecological commons
11	Resistance and Resilience (1000–1700 CE)	Resistance, alliances, Bhakti, temples and the economy, 1000–1700 CE
12	Governance and Public Policy	Governance, good governance, e-governance and the public policy cycle
13	Managing Your Personal Finances	Pillars of personal finance, budgeting, saving, investing, insurance, credit and income tax
14	From Ideas to Startups	Entrepreneurship, business plan, functional areas, profit and loss, startups

The Mastermind Coaching Classes — Road No. 5, VKIA, Jaipur — 9887258679

CHAPTER 09 · GEOGRAPHY (PART 2)

Oceans and Life

Oceans cover most of the planet and shape climate, trade, food and culture. In India the ocean, Samudra, is considered sacred. This chapter explores the hidden landscape of the ocean floor, the constant motion of waves, tides and currents, how early warning systems protect coasts from cyclones and tsunamis, the wealth of marine resources, and the international rules that decide who may use which part of the sea.

Big Questions

- What is the importance of ocean relief?
- How does ocean water movement impact life and environment?
- Why are maritime zones important for a country?
- How can we use ocean resources in a sustainable way?
- How do early warning systems help protect people from tsunamis and cyclones?

9.1 Ocean Relief (Submarine Relief)

DEFINITION

Submarine relief (ocean relief) is the set of landforms on the ocean floor: underwater mountains, valleys, plateaus, plains and trenches.

The **Mariana Trench** (Pacific Ocean) is the deepest place on Earth. The **Mid-Ocean Ridge** is the longest mountain range in the world, hidden under water and formed by volcanic activity. Some underwater mountains, such as **Mauna Kea** (Hawai'i), are taller than Mount Everest when measured from the sea floor.

Feature	Description	Why it matters
Continental shelf	Shallow, submerged edge of a continent	Rich in fish, oil and gas; main fishing zone
Continental slope	Steep slope marking the true edge of the continent	Leads from shelf to deep ocean
Abyssal plain	Vast, flat, deep ocean floor	Covers much of the deep sea
Mid-Ocean Ridge	Immense underwater volcanic mountain range	Longest mountain range; new crust forms here
Ocean trench	Deepest parts of the ocean	Mariana Trench is the deepest
Seamount	Underwater volcanic mountain that does not reach the surface	Habitat for marine life
Guyot	Flat-topped seamount, summit flattened by waves and later submerged	Evidence of past sea level

REMEMBER

Order from coast to deep sea: continent → continental shelf → continental slope → continental rise → abyssal plain, with ridges, trenches and seamounts rising or dipping within it.

9.2 Waves

A **wave** is the alternate rise and fall of the ocean surface. Waves are mainly caused by **winds** and carry energy across long distances.

Term	Meaning
Crest	High peak of the wave
Trough	Low valley between crests
Wavelength	Horizontal distance between two consecutive crests or troughs
Wave height	Vertical distance between trough and crest
Wave frequency	Number of crests passing a point each second
Wave period	Time taken by a crest to travel from one point to the next

▸ Waves as coastal architects

- **Erosional features:** waves open cracks by **hydraulic action** (force of moving water) and **abrasion**; the cracks widen into **sea caves**, caves cut through to form **sea arches**, arch roofs collapse leaving **sea stacks**, and stacks wear down to **stumps**.
- **Depositional features:** sand and pebbles settle to form **beaches**.
- Sequence on a headland: **crack → cave → arch → stack → stump**.

▸ Tsunamis

Giant waves caused mainly by **underwater earthquakes** are called **tsunamis**. On reaching the coast the maximum vertical height above sea level is the **run-up height**, which can be **30 m or more**.

9.3 Tides

> **DEFINITION**
> **Tides** are the rhythmic rise and fall of ocean water, occurring **twice a day** in most places. Highest level = **high tide (flood tide)**; lowest level = **low tide (ebb tide)**.

	Spring tide	Neap tide
When	Full moon and new moon days	First-quarter and third-quarter Moon
Position	Sun, Earth and Moon in a straight line	Sun and Moon pull in different directions
Effect	Very high high tides and very low low tides (large range)	Smaller difference between high and low tide

▸ Uses and effects of tides

- **Navigation:** ships enter harbours at high tide; they check depth and tidal range before berthing. Large crude carriers (VLCCs) wait for high tide in shallow channels like the **Singapore Strait**.
- **Tidal range:** 4–5 m in some ports; the **Gulf of Khambhat** has about **12 m**.
- **Tidal currents:** can reach **5–6 knots (about 9–11 km/h)**.
- **Fishing:** fish move close to shore at high tide, so catches improve.
- **Tidal energy:** sites include the **Gulf of Kutch, Gulf of Khambhat and Sundarbans** (India's coastline is 11,098.81 km).
- **Culture:** the Bhadkeshwar Mahadev Temple, Dwarka, can be reached only at low tide.

9.4 Ocean Currents

DEFINITION

Ocean currents are continuous streams of water flowing across the ocean surface in definite directions.

- **Causes:** winds, Earth's rotation (**Coriolis force**), differences in temperature and salinity, and the shape of continents and ocean basins.
- **Coriolis force** deflects moving objects to the **right in the Northern Hemisphere** and to the **left in the Southern Hemisphere**.
- **Warm currents** come from warm regions (shown **red**); **cold currents** come from cold regions (shown **blue**).

Current	Type	Effect
Gulf Stream	Warm, from Gulf of Mexico	Keeps Norway's coastal waters relatively ice-free despite latitude 60°–70°
Labrador Current	Cold, off east coast of Canada	Carries freezing water; sea ice and icebergs form even at lower latitudes

IMPORTANT

Regions where **warm and cold currents meet** are rich in nutrients and become **major fishing grounds**.

9.5 Cyclones, Tsunamis and Early Warning Systems

Cyclones are large rotating storms caused by atmospheric disturbances over **warm ocean waters**. Cyclones in the North Indian Ocean are named in sequence from a list of **169 names** supplied by **13 member countries** (e.g., Biparjoy 2023, Remal 2024).

Step 1 — Detection
A network of seismic stations detects undersea earthquakes in real time.

Step 2 — Confirmation
Ocean Bottom Pressure Recorders (OBPRs) on the sea floor confirm the passage of tsunami waves.

Step 3 — Tracking
Coastal **tide gauges and radars** monitor sea level changes to follow the waves.

Step 4 — Warning
Alerts go through satellite to government agencies and by SMS and other channels to officials and the public.

Agency / scheme	Role
ITEWC (Indian Tsunami Early Warning Centre)	Real-time network of detection buoys; sends alerts to the Government
INCOIS with IMD	Storm Surge Early Warning System (SSEWS) for forecasting surges and flooding
NCRMP	National Cyclone Risk Mitigation Project: shelters, warning systems, Decision Support System
GEMINI	GAGAN-enabled handheld device for fishermen; sends alerts via Bluetooth to a phone app in nine languages; range now 50 nautical miles (upgrade for 300); supported under **PMMSY**

NOTE

The **26 December 2004 Indian Ocean tsunami** killed about **2,30,000** people. The island of **Simeulue** was largely spared because local folklore taught people to recognise warning signs, showing the value of traditional knowledge and public awareness.

9.6 Marine Resources and the Blue Economy

Living resources	Non-living resources
Fish and seafood, marine biodiversity, bioactive natural products, aquatic vegetation, coral reefs	Oil and natural gas, minerals, sand and gravel, tidal and wave energy, offshore wind, gas hydrates

- **Coastal (neritic) fish** live on the shelf at 0–200 m depth; **oceanic fish** live beyond the shelf at over 200 m.
- **Significance:** food and livelihood, energy, minerals, trade (about **90 per cent** of global trade by volume goes by sea), tourism and culture.
- **Culture:** the conch (*śhaṅkha*) and cowrie (*kapardikā*), once used as currency, are linked to the **Samudra Manthana**.

DEFINITION

Blue Economy (World Bank): the sustainable use of ocean resources to promote economic growth, improved livelihoods and jobs while preserving the health of the marine ecosystem. Linked to **SDG 14: Life Below Water** (reduce pollution, protect ecosystems, regulate fishing, conserve marine areas).

9.7 Maritime Zones

Zone	Extent from baseline	Rights of the coastal country
Territorial waters	Up to **12 nautical miles**	Near-complete control; foreign ships have the right of **innocent passage**
Contiguous zone	Up to **24 nautical miles**	Limited control: customs, immigration, pollution
Exclusive Economic Zone (EEZ)	Up to **200 nautical miles**	Special rights over fish, oil and gas (UNCLOS); not full ownership; others may pass peacefully
High seas	Beyond all EEZs (about **64 per cent** of oceans)	Global commons; equal rights of navigation, fishing, overflight, cables; laws of the **flag state** apply

REMEMBER

1 **nautical mile = 1,852 m** (about one minute of latitude). **Innocent passage** means ships pass continuously without threatening peace or security; fishing and military activity are not allowed.

9.8 Maritime Rules and Regulations

- **UNCLOS** (UN Convention on the Law of the Sea): defines maritime zones and helps settle disputes.
- **COLREGs:** rules of the road at sea to prevent collisions (lookout, safe speed, give-way and stand-on vessels, lights and signals).
- **MARPOL:** prevents pollution of the sea by ships.
- Purpose: keep oceans safe, clean and open for trade; avoid accidents, piracy and disputes.

Likely question	Model answer
Why is the continental shelf economically important?	It is shallow and rich in fish, oil and gas.
How are sea stacks formed?	Waves erode a headland to a crack, cave, arch; the arch collapses leaving a stack.
Differentiate spring and neap tides.	Spring tides occur at full and new moon with Sun-Earth-Moon aligned (large range); neap tides at quarter moons (small range).
Why does Norway not freeze despite high latitude?	The warm Gulf Stream flows towards it.
Why are meeting points of warm and cold currents good fishing grounds?	Mixing brings nutrients that support plankton and fish.
Name the four stages of tsunami warning.	Detection, confirmation, tracking, warning dissemination.
What is the EEZ?	A zone up to 200 nautical miles in which a country has special rights over marine resources.
What is innocent passage?	The right of foreign ships to pass through territorial waters peacefully and continuously.

★ KEY TAKEAWAYS

- Ocean relief includes shelf, slope, abyssal plain, ridges, trenches, seamounts and guyots; the Mariana Trench is the deepest point.
- Waves (wind-driven), tides (gravitational pull of Moon and Sun) and currents (winds, Coriolis, temperature, salinity) shape coasts, climate, fishing and navigation.
- Spring tides come at full and new moon; neap tides at the quarter moons.
- Early warning (detect, confirm, track, warn) plus public awareness and traditional knowledge save lives; India uses ITEWC, INCOIS, IMD, NCRMP and GEMINI.
- Marine resources are living and non-living; the Blue Economy and SDG 14 stress sustainable use.
- Maritime zones are 12 NM (territorial), 24 NM (contiguous), 200 NM (EEZ) and the high seas; UNCLOS, COLREGs and MARPOL govern the seas.

CHAPTER 10 · GEOGRAPHY (PART 2)

Life on Earth

Life on Earth is arranged like a patchwork quilt of biomes, each shaped by climate, landforms and water. Humans are part of these systems: they depend on forests, grasslands, waters and deserts, and in turn change them. This chapter explains the major biomes, the idea of biodiversity and its conservation, how forest communities live and what challenges they face, and how rights, traditions and shared commons help protect nature.

Big Questions

- How do physiography and climate shape life on Earth?
- How are humans and other life forms interconnected?
- What is the importance of preserving various life forms, and how can we contribute to their conservation?

10.1 Biomes of the World

DEFINITION

A **biome** is a large natural region where certain types of plants and animals live under similar climatic conditions. (*bio* = life, from Greek *bios*.) A biome is a broad environmental region; an **ecosystem** is like a neighbourhood within it where living and non-living things interact closely.

Biomes are decided by **temperature, precipitation, dominant plant species and growth forms of vegetation**. They are grouped as **terrestrial** (forest, grassland, desert, tundra) and **aquatic** (freshwater and marine). Major types on the world map: tropical rainforest, grassland, desert, temperate deciduous, taiga and tundra.

Biome	Climate / location	Plants and animals	Notes
Tropical rainforest	Hot and wet all year; 23.5° N to 23.5° S; Amazon, Congo, SE Asia, Andaman & Nicobar, North-East India	Dense, layered forest; huge variety of species	Called a **gene bank**; maintains oxygen and climate balance
Grassland	Moderate rainfall, not enough for dense forest	Grass, few trees; grazing animals	**Temperate:** prairies (N. America), steppes (Asia), fertile, farming. **Tropical:** savannas (Africa), lions, elephants, giraffes
Desert	Driest; hot (Sahara) or cold (Gobi)	Cacti, camels, lizards, snakes; sparse vegetation	Store water, withstand heat; minerals and oil; **Rann of Kutch** is a salt desert
Tundra	Coldest; near polar regions; long winters	Mosses, lichens, shrubs; reindeer, arctic fox, polar bear	**Permafrost**; fragile ecosystem
Taiga	Cold, sub-polar	Coniferous trees: pines, spruces, larches	Boreal forest

Biome	Climate / location	Plants and animals	Notes
Temperate deciduous	Moderate temperature, distinct seasons	Broad-leaved trees that shed leaves	Seasonal change

▸ Layers of a rainforest

From top to bottom: **emergent layer**, **upper canopy**, **understory / lower canopy**, **forest floor**.

▸ Aquatic biomes

- Cover about **three-fourths** of the Earth's surface.
- **Freshwater:** rivers, lakes, ponds, wetlands; drinking water, farming, fish, frogs, insects.
- **Marine:** oceans, seas, coral reefs; store and distribute heat, influence climate; whales, dolphins, fish, plankton; food and jobs for millions.

▸ Biome pyramid

A **biome pyramid** shows relationships among organisms by energy, number or biomass. **Producers** (plants, algae) form the base; then **herbivores** (primary consumers), **carnivores** (secondary consumers) and **top consumers**. Numbers, biomass and energy **decrease upwards** because energy is lost as heat in metabolism.

10.2 Biodiversity and Its Conservation

DEFINITION

Biodiversity is the variety of life on Earth: plants, animals, microorganisms and the ecosystems they live in, including genetic differences within species and the variety of habitats and processes.

Geographical aspect	Meaning / example
Hotspots	Regions with unique species: Himalaya, Western Ghats, North-East India, Andaman & Nicobar Islands
Ecosystem-based conservation	Strategy suits the setting: mangrove protection on coasts, afforestation in mountains
Protected areas	National parks, wildlife sanctuaries, biosphere reserves, World Heritage Sites; prevent habitat fragmentation
Barriers and corridors	Rivers, mountains and valleys affect animal movement; wildlife corridors help gene flow
Human–environment interaction	Terrace farming in hills, agroforestry in plains

NOTE

Living beings and biomes depend on each other: animals pollinate and disperse seeds, microorganisms recycle nutrients, humans modify landscapes for farming and cities.

10.3 Forests and People

▸ Forest ecotourism

Ecotourism is responsible travel to nature-friendly places without harming the environment while supporting local people. It stresses minimal impact, respect for communities and learning about ecosystems. The

Swadesh Darshan 2.0 scheme promotes sustainable destinations. **Thenmala** (Kollam, Keralam; 'Honey Hill') is India's **first planned ecotourism** destination, developed by the Tourism, Forest and Irrigation Departments; locals work as guides, eco-guards and service providers.

▸ Forests and livelihoods

- Forests give **food, fuel, fodder, medicine, shelter, timber, bamboo and firewood**.
- **Non-timber forest products (NTFPs):** honey, fruits, nuts, resins, tendu leaves, mahua flowers, lac, medicinal plants.
- Communities such as the **Gonds and Bhils** perform rituals to honour forest deities before collecting produce.
- **Sacred groves** (over 1,00,000 in India; names: *Devrai, Devarakadu, Kavu, Sarna*) are small forest patches protected for religious reasons; they hold rare plants and wildlife and help maintain streams and groundwater.

▸ Forest dwellers

Role	Description
Livelihood and income	Gather and process NTFPs
Household needs	Firewood, fodder, wild fruits, roots, medicinal plants
Knowledge holders	Traditional knowledge of herbs and forest resources
Forest protection	**Bishnoi Movement** (Rajasthan, Amrita Devi) inspired **Chipko** (Uttarakhand), where women hugged trees
Cultural and social role	Forests linked to rituals, festivals, beliefs

▸ Geographical Indication (GI) tags

> **DEFINITION**
> A **GI tag** is an intellectual property right identifying a product as originating from a specific place whose quality or reputation is linked to that origin. It protects regional products, promotes heritage and brings income to local people.

GI-tagged product	State
Ramban Sulai Honey	Jammu and Kashmir
Tezpur Litchi	Assam
Channapatna Toys (Wrightia tinctoria wood)	Karnataka
Kandhamal Haldi (high curcumin)	Odisha
Erode Turmeric	Tamil Nadu
Nilgiri Tea	Tamil Nadu, Keralam, Karnataka
Tripura Queen Pineapple	Tripura
Khasi Mandarin	Meghalaya

10.4 Challenges and Government Support

- **Challenges:** poor healthcare, education and clean water; fuelwood fumes harm women's health (**PM Ujjwala Yojana** helps); restrictions on forest use; floods, landslides and **forest fires**; crop damage and attacks by elephants, monkeys and wild boar; low prices for forest produce and lack of awareness of rights.
- **Forest Rights Act, 2006 (FRA):** recognises rights of eligible communities over forest land and resources, allows collection of minor forest produce and grants ownership of small cultivated patches.
- **Other support:** Joint Forest Management (JFM), PESA, DAJGUA, PM JANMAN, scholarships, health and skill programmes.

IMPORTANT

Mendha Lekha (Gadchiroli, Maharashtra; Gond village) was the first village in India to gain rights over its forest under the FRA. Following **'Mawa Nate Mawa Raj' (our village, our rule)**, the Gram Sabha manages 1,800 hectares, regulates tree cutting, prevents fires, promotes bamboo harvesting and uses revenue for education and infrastructure.

10.5 Ecological Commons

Ecological commons are natural resources such as forests, rivers, lakes, grazing lands, air and biodiversity shared and used collectively by a community, often managed by traditional rules. Population growth, industry and privatisation are shrinking them.

Case study	Key points
Commons-based fisheries, Bihar	Large landowners once controlled water bodies and marginalised fishers; the **Bihar Fish Jalkar Management Act, 2006** promotes community-led management and public access; fish production has grown
Traditional water tanks	Chandella and Bundela kings built about **8,000 tanks** in Bundelkhand (800–1200 CE); *keres* (Karnataka), *eri* (Tamil Nadu), *chevuru* (Andhra Pradesh, Odisha), *ahar pynes* (Bihar), *katas* of the Gond kings; over **15 lakh** functional tanks in India today

Likely question	Model answer
Differentiate biome and ecosystem.	A biome is a large region of similar climate and life; an ecosystem is a smaller community within it.
Why are rainforests a 'gene bank'?	They hold the richest biodiversity and genetic resources.
What is permafrost?	Soil frozen almost throughout the year, found in tundra.
Why do energy and numbers fall up a biome pyramid?	Energy is lost as heat at each level.
What are sacred groves?	Small forest patches protected by communities for religious and cultural reasons.
What is ecotourism?	Responsible nature travel with minimal impact that benefits local people.
What is the Forest Rights Act, 2006?	A law recognising the traditional rights of forest dwellers over forest land and minor forest produce.
What are ecological commons?	Shared natural resources used collectively by a community.

★ KEY TAKEAWAYS

- Biomes are large regions shaped by climate and vegetation: forest, grassland, desert, tundra (terrestrial) and freshwater and marine (aquatic).
- Biodiversity is the variety of life; hotspots, protected areas and corridors help conserve it.
- Forests give livelihoods through NTFPs, ecotourism and cultural practices; sacred groves and movements like Bishnoi and Chipko show community protection.
- GI tags protect region-specific products such as Tezpur Litchi and Kandhamal Haldi.
- The Forest Rights Act, 2006, JFM and PESA support forest dwellers; Mendha Lekha is a model of community forest governance.
- Ecological commons such as fisheries and tanks need community-based management to survive.

CHAPTER 11 · HISTORY (PART 2)

Resistance and Resilience (1000–1700 CE)

Between 1000 and 1700 CE the subcontinent faced repeated invasions, yet kingdoms, communities and traditions survived. This chapter shows how resistance (opposing threats) and resilience (enduring and adapting) worked together through war, alliances, faith, temples and trade.

Big Questions

- How did Indian rulers use resistance and alliances to safeguard their lands?
- What factors made kingdoms and communities resilient?
- How did the Bhakti tradition foster solidarity?
- How did agriculture, trade and commerce keep the economy sound?

Key Ideas: Resistance and Resilience

DEFINITION

Resilience is the capacity to survive and adapt in difficult situations while preserving inherited socio-cultural and spiritual traditions. **Resistance** is actively opposing a force or threat to protect political power, territory, interests or identity, through warfare, alliances, diplomacy or negotiation.

- Resilience is the **backbone of resistance**: leadership supplies the cause, resilience supplies the strength to endure.
- The period is a story of **conflict and cooperation**, not only of invasion.
- Fertile plains fed by perennial rivers produced surplus, which also attracted invaders from the 7th century onwards.

Resistance in the 11th–13th Centuries

- Arab forces came by sea and land from the mid-7th century and were repulsed by rulers of the Deccan, Malwa, Kashmir and Rajasthan.
- **1001:** Mahmūd of Ghaznī attacked the Hindu Shāhi ruler Jayapāla. Hindu Shāhis, Chandellas, Solankīs and Chauhāns fought Turkish invaders.
- **1178:** Queen **Nāikī Devī** of the Chaulukya kingdom defeated Muhammad Ghūrī at **Kasahrada**, near Mount Abu.
- **1192:** Second Battle of Tarain, Ghūrī defeated Prithvīrāj Chauhān. Chauhāns, Gahaḍavālas and Senas later came under Turkic control.
- Gujarat, Malwa and Bundelkhand under the Chandellas resisted for about a hundred years. Odisha and parts of Assam were never conquered, and peninsular India stayed free of Turkic control.

Resistance to the Delhi Sultanate (from 1206)

- The **iqta** system assigned territories to military commanders in place of salaries; it served revenue collection but burdened peasants.
- Sultanate armies demolished local sacred sites, so resistance had both political and cultural motives.

- Resisting states: Yādavas of Devagiri, Rajput dynasties, **Kākatīyas** of Warangal (Queen **Rūdramā Devī**, 1262–1289) and Hoysālas.

Year	Event
1298	Alauddin Khiljī captures Anhilwara and plunders Somnath
1301	Siege of Ranthambore
1303	Siege of Chittor
1307	Malik Kāfūr's expedition against the Yādavas of Devagiri
c. 1325	Sisodiā ruler Rāṇā Hammīr takes Mewar
1336	Vijayanagara Empire established

Rajputs and the Mughals (1500–1700)

Year	Event
1526	First Battle of Panipat: Bābur defeats Ibrāhim Lodī; Sultanate ends
1527	Battle of Khanua: Rāṇā Sāngā's Rajput confederacy loses to Bābur
1567–68	Akbar besieges Chittor; Rāṇā Udai Singh resists for over five months, then retreats to the Aravallis
1576	Battle of Haldighati: Mahārāṇā Pratāp vs Akbar
1582	Battle of Dewair: Pratāp regains control of Mewar
1605–09	Jahāngīr's advances countered by Mahārāṇā Amar Singh

- After Haldighati, Pratāp used **guerrilla warfare** in the Aravalli terrain and the **Bhils** supported him. Mewar's emblem shows a Rajput and a Bhil warrior with Eklingjī.
- A treaty exempted Mewar's ruler from attending the Mughal court, because the Mughals wanted peace on routes to Surat.
- The Kachhwāhas of Amber cooperated and received **mansabs** (ranks combining military and civil duties).
- Poet Dursā Arhā praised Pratāp for never joining the Nauroz festival or standing guard at Jharokha Darshan.

Ahoms, Vijayanagara and Nayakas

▸ The Ahom kingdom (1228–1826)

- Strategy: use forests, rivers and monsoons, avoid direct confrontation, build alliances; the **Paik system** and light **bāchārī** boats helped.
- 1615: clash at Samdhara. 1662: Mīr Jumlā takes Garhgaon but the imposed treaty is renounced by Jayadhvaj Singha.
- **1671: Battle of Saraighat**, Lachit Borphukan defeats the Mughal fleet; the Brahmaputra becomes a boundary.

▸ Vijayanagara (from 1336)

- Founded by **Harihara and Bukkā** near Hampi to check Sultanate expansion; river and rocky hills gave natural defence.
- 1342, Battle of Kannanur: Hoysāla king Vīra Ballāla III killed. **Kumāra Kampana** later ended the Madurai Sultanate and restored images at Kanchipuram and Srirangam.
- Kṛiṣhṇadevarāya (died 1529) was its peak; **1565 Battle of Talikota** led to defeat and fragmentation into Nāyaka kingdoms.
- **Muthu Vīrappa Nāyak III** of Madurai defied the Mughal ritual of receiving the royal slipper.

Marathas, Sikhs and Jats

Group	Key facts
Marathas	Śhivājī, Pratapgarh 1659 (Afzal Khan killed), coronation 1674; **swarājya** (self-rule); forts Raigad, Sinhagad as guerrilla bases; Aurangzeb spent over two decades in the Deccan
Sikhs	Guru Nānak (one God, equality); Guru Arjan Dev executed under Jahāngīr; Guru Hargobind built the **Akāl Takht** (mīrī-pīrī); Guru Tegh Bahādur executed 1675; **Khalsa 1699**; armed **misals**
Jats	Heavily taxed peasants of the Doab; revolted 1669 under Gokul Jat and 1686 under zamindars of Sinsani and Sogar; Mughals prevailed by 1691 but resistance continued

> **NOTE**
> Gingee (Senji) fort in Tamil Nadu was held by Nayakas, Bijapur, Mughals, Marathas, French and English, and was declared a UNESCO World Heritage Site in 2025.

Bhakti and Sufism

- **Bhakti** is personal devotion expressed in local languages; it stressed inclusivity and equality. Nayanars (Śhiva) and Alvars (Viṣhṇu) spread it in the south; Rāmānanda linked south and north.
- Two streams: **Nirguṇa** (formless divine, e.g. Kabīr) and **Saguṇa** (divine with attributes, e.g. Tulsīdās).
- **Nām kīrtan, satsang and sankīrtan** made worship independent of buildings; Chaitanya Mahāprabhu led sankīrtan against a Qazi's restriction.
- Local-language works: Eknāth (Marathi), Sankardev's Kīrtana Ghosha, Tulsīdās's Rāmcharitmānas (Awadhi), Atukuri Molla's Telugu Rāmāyaṇa.
- Women saints: Akkā Mahādevi, Lāl Ded, Bahinābāi. Raskhān and Rahīm wrote devotional poetry in Braj.
- **Sulh-i-kul** (‘peace with all’) became Akbar's later policy.
- **Sufism** grew in silsilahs; Chishti and Suhrawardi orders under the Sultanate, Qaddiriyya and Naqshbandiya under the Mughals; khanqahs were community centres.

Temples and the Economy

- Temples were economic hubs: land grants, employment for artisans and priests, credit to farmers and merchants, and centres of art and education.
- Rulers drew legitimacy from deities: Gajapatis as **Rauta of Jagannath**, Kachhwāhas for Govindadevajī, Kota rulers for Rāma.
- From the 11th century many temples were destroyed, yet rulers, guilds and communities restored them; Kashi Vishwanath was rebuilt by Toḍar Mal and Man Singh and the present temple built by Ahilyābāī Holkar in 1780.

- From the 16th century **havelī temples**, plain and in lanes, avoided destruction; Jagat Shiromani Temple, Amer, is an example.
- Land revenue was the main income, at times up to 50 per cent of produce under Alauddin Khiljī and Muhammad bin Tughlaq.
- Rope pulleys and the Persian wheel raised output; Vijayanagara invested in small-scale irrigation.
- **Hunḍī** (a bill of exchange) worked through sarrāfs and gumasthas; banjārās and caravans connected villages, towns and Central Asia; Gujarati, Malabar, Coromandel and Bengal merchants thrived in Indian Ocean trade.

IMPORTANT

Economic strength supplied the resources for resistance: farming, irrigation, markets, merchant networks, hunḍī and Indian Ocean trade kept society stable through political change.

Quick Revision: Likely Exam Questions

Likely question	Model answer
How are resistance and resilience linked?	Resistance opposes threats; resilience provides the endurance that sustains it.
Who defeated Muhammad Ghūrī in 1178?	Queen Nāikī Devī of the Chaulukyas at Kasahrada.
Why was the Battle of Khanua important?	Bābur defeated Rāṇā Sāngā's Rajput confederacy in 1527, a turning point for Mughal rule.
How did Pratāp resist Akbar?	Guerrilla warfare in the Aravallis, with Bhil support, regaining most of Mewar by the 1580s.
What was the importance of Saraighat (1671)?	Lachit Borphukan's naval win secured the Brahmaputra as Ahom boundary.
What is mīrī-pīrī?	The Guru's authority over worldly (mīrī) and spiritual (pīrī) matters; Akāl Takht and Harmandir Sahib.
How did Bhakti show resilience?	Local languages, nām kīrtan and satsang let devotion continue without temples.
What is a havelī temple?	A plain, house-like temple built in lanes to avoid destruction.
What was hunḍī?	A bill of exchange for safe long-distance payment.

★ KEY TAKEAWAYS

- Resistance (opposing threats) and resilience (enduring and adapting) worked together between 1000 and 1700 CE.
- Rajputs, Ahoms, Vijayanagara, Marathas, Sikhs and Jats defended lands using war, alliances, terrain and diplomacy.
- Key dates: 1001, 1178 Kasahrada, 1206 Sultanate, 1336 Vijayanagara, 1526 Panipat, 1527 Khanua, 1576 Haldighati, 1671 Saraighat, 1674 Śhivājī, 1699 Khalsa.
- Bhakti used local languages and community singing; Sufism and Sulh-i-kul added to cultural coexistence.
- Temples were economic and political centres; havelī temples show adaptation.
- A dynamic economy of agriculture, irrigation, merchants, hunḍī and Indian Ocean trade strengthened resilience.

CHAPTER 12 · POLITICAL SCIENCE (PART 2)

Governance and Public Policy

Democracy needs more than elections: it needs institutions that work openly, representatives who answer to people, and citizens who take part. This chapter explains governance, its Indian roots, good governance, e-governance and how public policy is made and implemented.

Big Questions

- What is governance and how has it evolved?
- What is public policy and what makes it public?
- What are the stages of policy-making?
- Who contributes to policy-making and implementation?
- What role do citizens play?

Government and Governance

	Government	Governance
Refers to	Institutions that exercise political authority	Process of decision-making, implementation and monitoring
Includes	Legislature, Executive, Judiciary	Government, citizens, media, civil society, private bodies
Focus	Who governs	How governing is carried out

DEFINITION

Governance is the system through which decisions are made, implemented and monitored for the welfare of people. Democratic governance rests on transparency, accountability, participation and the rule of law.

Example: a panchayat is the government that installs street lights; governance is the planning, repair and feedback process, with people reporting dark spots.

Evolution of Governance in India

- Colonial rule imposed its own models, and many colonial institutions continued after independence. India kept much knowledge of pre-colonial traditions, and the Constitution was framed in the spirit of Indian values.
- **Satyameva Jayate** (Muṇḍaka Upaniṣhad) is the national motto; the Supreme Court's motto **Yato Dharmastato Jayaḥ** comes from the Mahābhārata.
- The **Sengol**, a Chola-era symbol of righteous rule, was received by Nehru in 1947 and placed in the new Parliament in 2023.
- Gandhi's ideal was **Rām Rājya**: probity, transparency, compassion and welfare.
- **Rājadharma** was the king's duty to protect people and uphold Dharma. Kauṭilya says the king's happiness lies in the people's happiness. The Ṛigveda mentions the **Sabhā and Samiti**.

Good Governance

Feature	Meaning
Rule of law	Everyone is equal before the law
Accountability	Officials answer for their actions
Participation	Citizens take part in decisions
Transparency	Decisions are open and accessible
Effectiveness	Public resources are used wisely
Responsiveness	Government addresses people's needs
Inclusiveness	Every citizen has equal opportunities

- Good governance keeps law and order, protects rights, delivers services and builds trust.
- Government makes laws and policies; citizens vote, obey laws and participate; media informs; civil society raises awareness; the private sector adds economic activity.
- **Challenges:** weak coordination, unequal access to services, misuse of office, fake news.
- 25 December is observed as **National Good Governance Day**.

E-Governance

E-governance is the use of information and communication technology to provide services, share information, receive feedback and improve administration. It reduces paperwork and saves visits to offices.

Initiative	Purpose
UMANG	Many government services on one platform
Aadhaar	Unique identity
GeM	Government e-Marketplace for purchases
DigiLocker	Digital storage of documents
CPGRAMS	Public grievances
APAAR	Education-related digital identity

IMPORTANT

E-governance works only with devices, internet and digital skills, so services must stay inclusive.

Public Policy

DEFINITION

Public policy is a course of action adopted by the government to solve public problems, meet needs and promote welfare. It decides what to do, why, who, how and how success is measured.

- ‘Public’: made for public benefit, carried out by public institutions, financed by public money, and shaped by people.

- A school, company or housing society also has policies, but they apply to limited groups and are not public policy.

Stakeholder	Role	Example
Citizens	Identify problems, vote, give feedback	Residents ask for a zebra crossing
Elected representatives	Raise issues, make laws, approve budgets	MLA raises water shortage
Officials, departments	Prepare, implement, monitor	District collector coordinates a scheme
Civil society, media, experts	Study, create awareness, monitor	NGO runs a water campaign
Private sector	Resources, innovation	Solar panels via PPP
International organisations	Experience, technical and financial help	WHO and disease control

The Policy Cycle

Step 1 — Prioritising
Decide which needs and problems matter most.

Step 2 — Formulation
Consult stakeholders, draft the policy and check financial feasibility.

Step 3 — Adoption
Frame legislation and regulations.

Step 4 — Implementation
Act through officials, local bodies, civil society and citizens.

Step 5 — Monitoring
Track progress and ensure accountability.

Step 6 — Evaluation
Assess results and gather feedback for improvement.

> **NOTE**
> Case study: a hospital without ramps was improved after patients and a disability group raised the issue, the district asked PWD and Health Department to inspect, experts were consulted and funds were approved.

▸ NEP 2020: A Collaborative Policy

Process began in 2015; expert committee under **Dr K. Kasturirangan** in 2017; consultation with 2.5 lakh Gram Panchayats, 6600 blocks, 6000 urban local bodies and 676 districts; about 2 lakh suggestions; Union Cabinet approval in **July 2020**.

Policy, Programmes and Schemes

Level	Role	National Health Policy 2017
Policy	Sets direction and goal	Universal access to quality healthcare, affordability, accountability

Level	Role	National Health Policy 2017
Programme	Turns goals into strategies	Strengthening public healthcare, preventive care, digital health
Scheme	Gives concrete benefits	Ayushman Bharat PM-JAY, Janani Suraksha Yojana, Mission Indradhanush

Policy Coordination: Khelo Bharat Niti 2025

- Union Government: policy framework and funding.
- States: ‘Model Sports State’, host national games, build infrastructure, attract private investment through PPP.
- Districts: ‘Model Sports Districts’. Blocks: regular events and talent scouting.
- Private bodies: sponsorship, research on nutrition and equipment. Citizens, especially families of girls, support and give feedback.

Quick Revision: Likely Exam Questions

Likely question	Model answer
Differentiate government and governance.	Government is the institution; governance is the process of making, implementing and monitoring decisions.
Name the features of good governance.	Responsiveness, transparency, participation, rule of law, accountability, effectiveness and inclusiveness.
What is e-governance?	Use of ICT by governments for services, information and feedback.
Why is public policy ‘public’?	Made for public benefit, by public institutions, with public money.
Name the stages of the policy cycle.	Prioritising, formulation, adoption, implementation, monitoring, evaluation.
Differentiate policy, programme and scheme.	Policy gives direction, programme gives the plan, scheme gives specific benefits.
How can citizens strengthen governance?	Vote, obey laws, raise concerns, give feedback and hold authorities accountable.

★ KEY TAKEAWAYS

- Government means institutions; governance means the process of deciding, implementing and monitoring for welfare.
- India's governance ideas run from Sabhā and Samiti, Rājadharma and Rām Rājya to the Constitution.
- Good governance rests on seven features, including transparency, accountability and rule of law.
- E-governance speeds up services but must stay inclusive.
- Public policy follows a cycle from prioritising to evaluation, and many stakeholders share the work.
- Policy gives direction, programmes the plan and schemes the action; citizens' participation keeps the system accountable.

CHAPTER 13 · ECONOMICS (PART 2)

Managing Your Personal Finances

Pocket money, festival gifts, a first salary, a loan for a fridge: money decisions begin in childhood and grow with us. This chapter shows how to plan, save, invest and protect money, and how every earner contributes through tax.

Big Questions

- What is personal finance and why is it important?
- What are the pillars of personal finance?
- What are common savings and investment options?
- How can savings and assets be protected?
- What is income tax?

What Is Personal Finance?

DEFINITION

Personal finance is the planning and management of an individual's money to meet needs and wants: how much to spend, how much to save, where to invest and how to prepare for future needs.

Money is a scarce resource (Chapter 1), so it must be used efficiently. Someone who wants a house in five years must plan and manage money well to reach that goal.

The Five Pillars

Pillar	Meaning	Example
Income	Money received regularly or occasionally for goods sold or services rendered	Salary, business profit, rent, interest, dividends
Budgeting	Planning in advance how income will be spent	Monthly plan for rent, food, fees, transport
Saving	Keeping part of income aside for future use or emergencies	Money in a bank account or gullak
Investing	Putting savings into assets to protect value and earn returns	FDs, bonds, shares, mutual funds
Protection and risk management	Safeguarding income, savings and assets against loss	Insurance, careful borrowing

‘Earn While You Learn’ programmes (part-time work, internships, apprenticeships) let students earn while studying and gain skills.

Budgeting

DEFINITION

A **budget** is a written plan that balances income and expenses. It helps people prioritise needs, avoid impulse buying and live within their means.

Step 1 — Identify expenses
List all monthly expenses, large and small.

Step 2 — Set a savings goal
Decide how much, for what and by when. To save ₹3,000 in six months for a bicycle, save ₹500 a month.

Step 3 — Track spending
Compare actual spending with the budget and correct overspending.

Step 4 — Review and adjust
Revise when income, costs or goals change, e.g. rising transport costs.

Goal-setting questions: What do I want to achieve? How much will I need? By when? What steps will help?

Saving and Investing

- **Saving** is a financial surplus kept for emergencies and future investment. Experts suggest *save first, spend what is left*: **Expenses = Income − Savings** (income ₹1,00,000, save ₹20,000 → spend ₹80,000).
- **Investing** puts savings into assets to protect their value and earn returns, like planting a mango tree that gives fruit for years.
- Priya's ₹500 in a piggy bank is still ₹500 after a year; Sameer's ₹500 at 8% becomes ₹540.

Term	Meaning
Liquidity	How quickly an asset can be converted into cash without losing value
Inflation	Rise in prices over time, reducing purchasing power (a ₹1,000 bag costs about ₹1,060 after a year at 6%)
Purchasing power	Quantity of goods a unit of money can buy
Compounding	Returns earned on the principal and on earlier returns
Maturity period	Time between issue of an investment and repayment of principal

FORMULA

Compound amount $\mathbf{A = P(1 + r)^n}$. Example: ₹30,000 at 8% for 5 years gives $A = 30{,}000 \times 1.08^5 \approx$ ₹44,080; interest ≈ ₹14,080. Check: ₹10,000 at 10% for 2 years = ₹12,100.

▸ Power of early investment

Bhavisha saves ₹1,000 a year from age 25, Dhruv from 35, both at 7%. At 65 Bhavisha has about ₹1,99,635 and Dhruv about ₹94,460 (roughly 40%). Earlier money earns returns for longer, so the curve is flat at first and steeper later.

Common Investment Options

Option	What it is	Risk / return
Fixed deposit (FD)	Lump sum with a bank or post office for a fixed period at a fixed rate	Low risk, assured but lower return
PPF, NSC, Sukanya Samriddhi	Government-backed small savings for long-term savings	Safe, reasonable return
Bonds	Loan to government or company for regular interest; ₹10,000 at 5% pays ₹500 a year	Government bonds safer than corporate bonds
Shares (equity)	Part-ownership of a company; dividends and price rise	Highest risk, highest long-term potential
Mutual funds	Pooled money invested by professionals in shares, bonds etc.	Moderate; diversified but subject to market risk

IMPORTANT

BSE SENSEX is the benchmark index of the Bombay Stock Exchange tracking 30 large, financially sound, actively traded companies. It fluctuates in the short run but rises in the long run.

▸ Four factors before investing

- **Risk:** chance of losing money.
- **Return:** profit earned.
- **Time horizon:** how long the money can stay invested.
- **Liquidity:** ease of converting to cash.
- **Risk–return trade-off:** lower risk usually means lower return; higher risk may mean higher return. Choose by goals, risk tolerance and when money is needed.

Protection: Insurance and Credit

DEFINITION

Insurance is a legal contract in which a person pays a regular **premium** and the insurer compensates specified losses. It works on **risk sharing** through a common pool.

Type	Covers	Examples
Health	Hospital bills, medicines, tests	Ayushman Bharat PM-JAY for eligible low-income households
Life	Family's needs if the earner dies	Daily expenses, education, loans
General	Vehicles, homes, businesses, crops, cattle	Motor, property, crop, cattle insurance

- **Borrowing** helps when productive (education loan) and harms when used for unnecessary goods (debt burden).
- **EMI** (equated monthly instalment): fixed monthly repayment of principal plus interest. A ₹30,000 fridge on ₹3,000 × 12 costs ₹36,000, i.e. ₹6,000 extra. Too many EMIs reduce savings and emergency funds.

Taxes and Income Tax

- **Taxes** are compulsory payments to the government to fund schools, hospitals, transport and defence.
- **Direct tax:** paid directly on income or profit (income tax). **Indirect tax:** added to the price of goods and services (GST).
- **Progressive taxation:** higher income, higher rate, reducing inequality. The financial year runs 1 April to 31 March.
- Slabs are proposed by the Ministry of Finance in the Union Budget; the **CBDT** administers direct tax laws.

Annual income (new regime, FY 2025–26)	Rate
Up to ₹4 lakh	Nil
₹4–8 lakh	5%
₹8–12 lakh	10%
₹12–16 lakh	15%
₹16–20 lakh	20%
₹20–24 lakh	25%
Above ₹24 lakh	30%

FORMULA

Worked example (Priya): salary ₹14,00,000 − standard deduction ₹75,000 = taxable ₹13,25,000. Tax = 0 + 5% of ₹4 lakh (₹20,000) + 10% of ₹4 lakh (₹40,000) + 15% of ₹1,25,000 (₹18,750) = **₹78,750**. For taxable income ₹3,80,000 the tax is **nil**.

NOTE

Standard deduction is a fixed amount salaried employees and pensioners may deduct before calculating tax. Only the part of income inside a slab is taxed at that slab's rate.

Likely question	Model answer
What are the five pillars of personal finance?	Income, budgeting, saving, investing, protection and risk management.
Why is saving alone not enough?	Inflation reduces the purchasing power of idle money, while investments can earn returns above inflation.
What is compounding?	Earning returns on both principal and past returns.
Why do mutual funds reduce risk?	Money is spread over many assets (diversification) and managed by professionals.
Why buy insurance?	To share risk and avoid heavy loss from illness, accident or damage.
Distinguish direct and indirect tax.	Direct: paid on income (income tax). Indirect: added to price (GST).
What is progressive taxation?	Tax rate rises with income.

★ KEY TAKEAWAYS

- Personal finance rests on **income, budgeting, saving, investing and protection**.
- A budget has four steps: identify expenses, set a goal, track, review.
- **Inflation** erodes idle money; **compounding** rewards early investing.
- FDs and bonds are safer; shares riskier but potentially higher return; mutual funds diversify.
- Weigh **risk, return, time horizon and liquidity** before investing.
- **Insurance** shares risk; borrow only for productive needs; mind EMIs.
- Income tax is **progressive** and uses slabs; honest tax paying funds public services.

CHAPTER 14 · ECONOMICS (PART 2)

From Ideas to Startups

A lemonade stall at the school festival shows the heart of business: plan, spend, price, sell and check the profit. This chapter follows entrepreneurs from Lijjat to Oberoi and shows how an idea becomes a business venture.

Big Questions

- How does entrepreneurship impact society and the economy?
- What are the functional areas of a business?
- How to develop a business plan?

Entrepreneurship

DEFINITION

Entrepreneurship is the process through which an individual or a group converts a potential business idea into a business venture. **Profit** is money earned after paying the costs of producing and selling.

Task of an entrepreneur	Meaning
Takes risks	Invests money and time
Combines factors of production	Land, labour, capital, technology
Identifies a problem	Resolves to solve it innovatively
Makes key decisions	On operation and functioning
Contributes to society	Welfare through innovation

The Jataka tale *From a Dead Mouse to Riches* shows a poor youth turning a dead mouse into a fortune step by step through intelligence and hard work, and then sharing his wealth with the community.

Stories of Entrepreneurs

Venture	Key facts	Lesson
Lijjat Papad	1959: seven homemakers in a Mumbai chawl, ₹80; cooperative registered 1962 as Shri Mahila Griha Udyog Lijjat Papad; equal owners and equal profit share; by 2023 over 45,000 women, 83 branches, ₹1,600 crore turnover; scholarships and transport	Grit, unity, quality and cooperation create self-reliant livelihoods
Mohan Singh Oberoi	Born 1898 in Punjab; hotel clerk in Shimla at ₹50 a month; in 1934 mortgaged his wife's jewellery to buy a hotel; built the Oberoi Group; Padma Bhushan 2001; died 2002	Initiative, risk-taking and management of staff, finance and quality
Dandekar brothers (1931)	Started with ink powder in recycled bottles; studied colour chemistry in Glasgow; expanded into pencils, crayons and paints	Spotting a market gap and improving quality

Venture	Key facts	Lesson
Chettiars of Tamil Nadu	Traders, bankers, moneylenders across India and Southeast Asia; trust-based lending, accounting skill, reinvested profits in temples, education, welfare	Ethics and long-term vision

> **NOTE**
> A **mortgage** is a loan used to buy a house or land with collateral. A **chawl** is a multi-storey tenement of single-room units.

Business Plan: A Road Map

A **business plan** is a written blueprint of the goals of a business and the steps to achieve them. It guides decision making, sets priorities and helps the venture grow. It is a *dynamic* roadmap, revised when conditions change.

Aspect	Key questions (bakery example)
Needs and idea	What do people need? Fresh bread, cakes, healthy options?
Potential customers	Children, young adults, families?
Money and costs	Oven, rent, salaries, ingredients, packaging; sources: savings, loans, investors
Location	Near schools or markets, or online orders
Human resources	Bakers, helpers, billing and delivery staff
Pricing and profits	Cover costs, earn profit, stay affordable (mini cake jars)
Promotion	Social media, posters, offers, attractive packaging
Challenges and risks	Competition, rising input costs, changing tastes, perishable stock

Functional Areas of a Business

Area	Focus	Bakery example
Management and operations	Planning, organising resources; efficient production and delivery	Equipment, quality checks, daily production plan
Finance and accounting	Obtaining and using funds; recording and reporting transactions	Paying costs, cash flow, profit and loss account
Human resources	Right people and skills	Hiring, training, motivating staff
Marketing and sales	Awareness and sales growth	Name, social media, discounts, online ordering

- **Fixed costs** do not change with output (rent, salaries, insurance). **Variable costs** change with output (raw materials, packaging).
- **Inventory:** goods and assets held for production or resale. **Accounting:** recording money flows so the owner knows performance.
- The areas work together: a great idea can fail if finance, HR, operations or marketing is weak.

FORMULA

Profit = Total revenue − Total expenses. Total cost = fixed cost + variable cost × units. Example: rent ₹40,000 + ₹10 × 1,000 cakes = ₹50,000.

▸ Profit and loss account: ABC Bakery (March 2026)

Item	Amount (₹)
Total income (bread 1,20,000 + pastries 75,000 + cakes 85,000 + delivery 15,000)	2,95,000
Total expenses (materials 1,00,000, packaging 12,000, rent 40,000, salaries 30,000, utilities 15,000, advertising 8,000, misc 7,000, interest 10,000)	2,22,000
Profit before tax	73,000
Tax	13,000
Profit after tax	60,000

Startups and the Nation

- A **startup** is a young early-stage company with an innovative product or service. Failure is part of learning.
- India has the **third-largest** startup ecosystem; about **120 unicorns** (valued over 1 billion dollars) in 2025, in e-commerce, fin-tech, health-tech and agri-tech. Hubs: Bengaluru, Hyderabad, Mumbai, Delhi NCR.
- **Startup India** supports **Atmanirbhar Bharat** (2020 policy for self-reliance); **Viksit Bharat 2047** aims at a developed India by 2047.
- Businesses improve quality of life, create jobs and income, produce goods and services, pay taxes, innovate and practise corporate social responsibility (education, environment, healthcare).

Likely question	Model answer
What is entrepreneurship?	Turning a business idea into a venture by identifying opportunities and taking risks.
Why is Lijjat a cooperative?	Members are equal owners and share profits equally.
What is a business plan?	A written roadmap of goals and steps.
Name the four functional areas.	Management and operations, finance and accounting, HR, marketing and sales.
Fixed vs variable cost?	Fixed stays constant (rent); variable rises with output (raw materials).
How is profit calculated?	Revenue minus expenses.
What is a unicorn?	A startup valued above 1 billion dollars.

★ KEY TAKEAWAYS

- An **entrepreneur** spots opportunities, takes risks and creates value.
- Lijjat (cooperative) and Oberoi (risk and management) show different routes to success.
- A **business plan** covers eight aspects and is revised as conditions change.
- Four functional areas must work together.
- **Profit = revenue − expenses**; fixed and variable costs make up total cost.
- Failures teach; startups create jobs and drive **Viksit Bharat 2047**.
