SECTION — A (Reading: 20 Marks) — 20 Marks

Read the passages and answer the questions that follow.

1. *Read the following passage carefully and answer the questions that follow.* **10**

When a rocket leaves the ground, thousands of people stand on rooftops to watch it, and thousands more complain about what it costs. 'Why spend crores on the sky,' they ask, 'when so much is needed on the earth?' It is a fair question and deserves a fair answer.

The first answer is that space research has already come down to earth. Weather satellites warn fishermen of cyclones and give farmers an idea of when the rains will arrive. Communication satellites carry our telephone calls and television programmes, and navigation systems help ambulances find the shortest road. Many of the materials used in modern kitchens, hospitals and sports shoes were first developed because a space mission needed something light and strong.

The second answer is less visible but more important. A country that builds rockets must train engineers, chemists and mathematicians of the highest quality. These people do not remain in space centres for ever; they move to industries, universities and start-ups, and carry their skill with them. A single successful mission can inspire a whole generation of children to look up and ask, 'How?'

Still, the critics are partly right. A nation must also build schools, hospitals and roads, and no scientist would deny it. The wise path is not to choose between earth and sky, but to see that the one supports the other. The wealth of knowledge that comes from space should return, again and again, to the people who paid for it.

(i) People complain about rocket launches because of: **1**

(a) their delay **(b)** their noise **(c)** their cost **(d)** their danger

(ii) Weather satellites help farmers by: **1**
