THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME — SET A

Geography Chapter 1: **Resources and Development** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(b)** potential resources	e.g. wind and solar energy in Rajasthan
2	**(d)** renewable and non-renewable	Classification
3	**(c)** Rio de Janeiro	Agenda 21
4	**(c)** 43 per cent	Mountains 30%, plateau 27%
5	**(a)** Both A and R are true and R is the correct explanation of A	Reporting area
6	**(a)** alluvial soil	Northern plains
7	**(b)** cotton	Black cotton soil
8	**(b)** over irrigation	Waterlogging, salinity
9	**(c)** contour ploughing	Soil conservation
10	**(d)** sustainable development	Our Common Future

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Everything available in our environment which can be used to satisfy our needs, provided it is technologically accessible, economically feasible and culturally acceptable.	2
12	The declaration signed by world leaders in 1992 at the UNCED, Rio de Janeiro, aiming at global sustainable development by combating environmental damage, poverty and disease through global co-operation.	2
13	Bangar is old alluvium with a higher concentration of kanker nodules; khadar is new alluvium with more fine particles and is more fertile.	1+1
14	Land made unfit for cultivation by gully erosion caused by running water; ravines.	1+1

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	(i) Identification and inventory of resources across regions — surveying, mapping, qualitative and quantitative estimation (ii) Evolving a planning structure endowed with appropriate technology, skill and institutional set-up (iii) Matching resource development plans with overall national development plans.	1+1+1
16	Maharashtra, Madhya Pradesh, Gujarat (Saurashtra), Chhattisgarh; cotton. Features: made of clayey material, high moisture-holding capacity, rich in calcium carbonate, magnesium, potash and lime; develops deep cracks in hot weather.	1+1+1
17	Contour ploughing along contour lines; terrace farming (steps cut on slopes) as in western and central Himalayas; strip cropping; planting shelter belts; afforestation and control of overgrazing.	1+1+1
	OR: Alluvial soil; consists of sand, silt and clay; very fertile — rich in potash, phosphoric acid and lime; ideal for sugarcane, paddy, wheat and pulses; intensively cultivated and densely populated.	1+2
18	Mining — Jharkhand, Chhattisgarh, Madhya Pradesh, Odisha; overgrazing — Gujarat, Rajasthan, Madhya Pradesh, Maharashtra; over-irrigation — Punjab, Haryana, western UP (waterlogging, salinity); industrial effluents and mineral processing dust.	1+1+1
	OR: Irrational consumption and over-utilisation lead to socio-economic and environmental problems; resources are finite; Gandhiji: 'There is enough for everybody's need and not for anybody's greed' — he blamed greedy individuals and exploitative technology, and wanted production by the masses instead of mass production.	1+2

SECTION — D (Long Answer) — Answers — 2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Geographical area 3.28 million sq km, data for 93 per cent; categories — forests, land not available for cultivation, other uncultivated land, fallow lands, net sown area (about 45 per cent); NSA over 80 per cent in Punjab and Haryana, under 10 per cent in Arunachal, Mizoram, Manipur, A&N; forest far below desired 33 per cent (National Forest Policy 1952) because of deforestation for agriculture, industry, mining, roads, urbanisation and population pressure.	3+2

	OR: Alluvial — northern plains and deltas, fertile, potash and lime; Black (regur) — Deccan trap, clayey, moisture-retentive, cotton; Red and yellow — crystalline igneous rocks, iron diffusion gives red colour, yellow when hydrated; Laterite — intense leaching, acidic, deficient in nutrients, tea, coffee, cashew; Arid — sandy, saline, kankar layer, lacks humus; Forest soils — hilly areas, acidic on upper slopes, fertile in valleys.	5
20	Technology made resources accessible and economically feasible; industrialisation and urbanisation increased demand; mass production, consumerism; greed of a few individuals and countries; depletion of resources, accumulation in few hands, global ecological crises — global warming, ozone depletion, pollution, land degradation; hence the need for sustainable development and resource planning.	5
	OR: Origin: biotic (flora, fauna, humans) and abiotic (rocks, metals); Exhaustibility: renewable (solar, wind, water, forests) and non-renewable (minerals, fossil fuels); Ownership: individual, community (grazing grounds, burial grounds), national, international (ocean beyond 200 nautical miles); Development: potential (wind in Rajasthan), developed, stock (hydrogen as fuel), reserves (water in dams).	5

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.

THE MASTERMIND COACHING CLASSES
CBSE / RBSE • NURSERY – CLASS XII • JAIPUR
Road No. 5, VKIA, Jaipur — 9887258679

ANSWER KEY & MARKING SCHEME SET B

Geography Chapter 1: **Resources and Development** | Class 10 Social Science | Maximum Marks: 40

SECTION — A (Objective Type) — Answers — 10 × 1 = 10

Q.	Correct Option	Brief Reasoning
1	**(a)** livestock	Living things
2	**(d)** developed resources	Status of development
3	**(c)** Jharkhand	Also Chhattisgarh and MP
4	**(a)** Schumacher	Resource conservation
5	**(b)** Both A and R are true but R is not the correct explanation of A	Both true but R doesn't explain A
6	**(b)** 30 per cent	Perennial rivers, tourism
7	**(a)** tea, coffee and cashew nut	With conservation techniques
8	**(d)** stabilisation of sand dunes by growing thorny bushes	Also shelter belts
9	**(b)** culturable waste land	Land use categories
10	**(c)** diffusion of iron in crystalline and metamorphic rocks	Yellow when hydrated

SECTION — B (Very Short Answer) — Answers — 4 × 2 = 8

Q.	Expected Answer / Value Points	Marks
11	Development that takes place without damaging the environment, and development in the present that does not compromise the needs of future generations.	2
12	Depletion of resources for the greed of a few; accumulation of resources in few hands (rich and poor); global ecological crises like global warming, ozone depletion, pollution, land degradation (any two).	2
13	Net sown area is the physical extent of land on which crops are sown and harvested; gross cropped area is net sown area plus area sown more than once in an agricultural year.	2
14	Large fields are divided into strips and strips of grass are left to grow between the crops to break the force of the wind.	2

SECTION — C (Short Answer) — Answers — 4 × 3 = 12

Q.	Expected Answer / Value Points	Marks
15	Individual — owned privately by individuals (plots, houses); Community-owned — accessible to all members of the community (grazing grounds, ponds, parks); National — all resources within political boundaries and oceanic area up to 12 nautical miles; International — regulated by international institutions, e.g. oceanic resources beyond 200 nautical miles (Exclusive Economic Zone).	3
16	India has enormous diversity in availability of resources; some regions rich in some resources but deficient in others — Jharkhand, Chhattisgarh, MP rich in minerals; Arunachal rich in water but lacks infrastructure; Rajasthan rich in solar and wind energy but lacks water; Ladakh has cultural heritage but lacks water and infrastructure; balanced planning needed at national, state, regional and local levels.	3
17	Red to brown in colour; sandy in texture and saline; in some areas salt content is so high that common salt is obtained by evaporating water; lack humus and moisture; kankar layer at the bottom restricts infiltration; become cultivable after irrigation (western Rajasthan).	3
	OR: Resources are not free gifts of nature; human beings transform materials in the environment into resources through technology and institutions; human beings themselves are essential components of resources; interactive relationship between nature, technology and institutions.	3
18	The denudation of the soil cover and subsequent washing down; gully erosion — running water cuts deep channels; sheet erosion — water flows as a sheet and washes away top soil; wind erosion — wind blows loose soil off flat or sloping land.	1+2
	OR: More than 100 heads of states met to address urgent problems of environmental protection and socio-economic development; signed the Declaration on Global Climatic Change and Biological Diversity; endorsed global Forest Principles; adopted Agenda 21 for sustainable development in the 21st century.	3

SECTION — D (Long Answer) — Answers

2 × 5 = 10

Q.	Expected Answer / Value Points	Marks
19	Continuous use of land without proper conservation results in degradation. Causes: deforestation, overgrazing, mining, over-irrigation, industrial effluents, mineral dust. Measures: afforestation; proper management of grazing; planting of shelter belts; stabilisation of sand dunes with thorny bushes; proper management of waste lands; control of mining; proper discharge and treatment of industrial effluents and wastes.	2+3
	OR: Availability of resources is necessary but not sufficient; technology, quality of human resources and historical experiences matter; colonial powers used superior technology to exploit colonies' resources; resource-rich but backward regions (Jharkhand, Chhattisgarh) lack technology and institutions; some regions with a poor resource base are economically developed because of technology and institutions; resources contribute to development only with appropriate technological and institutional changes.	5
20	Alluvial: deposited by Indus, Ganga, Brahmaputra; northern plains, Rajasthan-Gujarat corridor, eastern deltas (Mahanadi, Godavari, Krishna, Kaveri); sand, silt, clay; bangar and khadar; potash, phosphoric acid, lime; sugarcane, paddy, wheat, pulses. Black: climate and basalt parent rock (Deccan trap); Maharashtra, Saurashtra, Malwa, MP, Chhattisgarh, Godavari-Krishna valleys; clayey, moisture-retentive, calcium carbonate, magnesium, potash, lime, poor in phosphorus; cracks; cotton.	5
	OR: Contour ploughing — along contour lines; terrace cultivation — steps on slopes, western and central Himalayas; strip cropping — grass strips between crops; shelter belts — rows of trees, stabilised sand dunes in western India; afforestation; control of overgrazing; proper farming methods (not up and down the slope).	5

Evaluator's note: Award step marks as shown; accept any correct alternative method. In internal-choice questions, evaluate only the option attempted. Deduct up to ½ mark for missing units or figures where required.
