THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 8 — SCIENCE · MEDIUM LEVEL CHAPTER TEST SET 2

Chapter 2: **Invisible Living World: Beyond Our Naked Eye** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Medium level: multi-step questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. A scientist sees under a microscope a tiny moving single-celled organism with a nucleus in pond water. It is likely to be a: 1

(a) protozoan **(b)** virus **(c)** mushroom **(d)** bacterium

2. What is the function of the nucleoid in bacteria? 1

(a) stores water **(b)** makes food
(c) provides shape **(d)** contains genetic material

3. The red blood cell does not have a nucleus. Which statement best links this to function? 1

(a) It cannot carry oxygen
(b) It is a plant cell
(c) More space is available for carrying oxygen
(d) It is a virus

4. Which is not a function of the cell membrane? 1

(a) controlling exit of waste **(b)** producing chlorophyll
(c) protecting the cell contents **(d)** controlling entry of materials

5. The yeast cells in dough are active because they feed on: 1

(a) plastic **(b)** oil **(c)** salt **(d)** sugar

6. Which of the following pairs is wrongly matched? 1

(a) Virus - unicellular **(b)** Mushroom - multicellular fungus
(c) Paramecium - protozoan **(d)** Yeast - unicellular fungus

7. Bacteria that cause diseases are: 1

(a) decomposers **(b)** pathogens **(c)** producers **(d)** vectors

8. A cell with a thin projection called a 'root hair' is specialised for: 1

(a) absorption of water **(b)** contraction
(c) conducting impulses **(d)** carrying oxygen

9. Penicillin, the first antibiotic, was obtained from: 1

(a) a fungus **(b)** a virus **(c)** a bacterium **(d)** an alga

10. A group of cells that have the same shape and function form: 1

(a) a system **(b)** an organ **(c)** a tissue **(d)** an organism

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. How do viruses reproduce? 2

12. State two reasons for using a thin peel for a slide. 2

13. Why does a plant cell have a definite shape while an animal cell does not? 2

14. Why are antibiotics ineffective against viral infections? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Explain why multicellular organisms need organs and systems but unicellular ones do not. 3

16. Justify: 'Cell is the structural and functional unit of life'. 3

17. How does a microscope help in the prevention of diseases? 3

OR

Compare a virus and a bacterium on three points. 3

18. Describe how you will distinguish an onion cell from a human cheek cell under a microscope. 3

OR

Why do we use a cover slip while observing a slide? 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. Explain how a multicellular organism like a human body is organised from the cell to the organism. Name one example of each level in the digestive system. 5

OR

Describe the activity to observe pond water with a microscope and state three things you may find. 5

20. Describe the importance of bacteria in the environment and in industry (at least three roles). 5

OR

Discuss how the discovery of the microscope changed our understanding of diseases and living things. 5

END OF QUESTION PAPER — Total: 40 Marks

MASTERMIND
