THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 8 — SCIENCE · HARD LEVEL CHAPTER TEST SET 1

Chapter 3: **Health: The Ultimate Treasure** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Assertion (A): Antibiotics are not effective against influenza. Reason (R): Influenza is caused by a virus, which has no bacterial structures for antibiotics to act on. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

2. In a school of 500 students, 40 got infected with influenza in a week and 30 more next week. The number infected after two weeks is: 1

(a) 30 **(b)** 70 **(c)** 40 **(d)** 500

3. A student claims, 'I took antibiotics for my cold and it got better, so antibiotics cure colds.' The flaw is: 1

(a) antibiotics cure all diseases
(b) antibiotics are vaccines
(c) colds are bacterial
(d) colds are viral and often recover by themselves

4. Assertion (A): Vaccination protects a child against a disease before exposure. Reason (R): Vaccines make the body produce antibodies against the pathogen. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

5. A town has 20,000 people. If 15,000 are vaccinated, the percentage vaccinated is: 1

(a) 15% **(b)** 75% **(c)** 50% **(d)** 25%

6. An outbreak of dengue is reported in a colony. Which of the following steps is least useful? 1

(a) fogging by authorities **(b)** using mosquito repellent
(c) removing stagnant water **(d)** boiling milk

7. Assertion (A): Malaria can be controlled by draining stagnant water. Reason (R): Mosquito larvae develop in stagnant water. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

8. Why is it risky if many people in a community skip vaccination? 1

(a) The pathogen can spread through unvaccinated people
(b) Water becomes impure
(c) Vaccines cause the disease
(d) Antibodies disappear

9. A new disease spreads from person to person. Which first step reduces the spread? 1

(a) closing hospitals **(b)** stopping all food
(c) isolating the patients and hygiene **(d)** ignoring symptoms

10. Assertion (A): Diabetes is a communicable disease. Reason (R): Diabetes spreads from person to person by contact. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. A town of 8000 has 6000 vaccinated persons. Find the percentage unvaccinated and say why it is important to keep it low. 2

12. Why do chronic diseases like diabetes require lifelong care? 2

13. Why are public toilets and clean drains important for community health? 2

14. Why is a person more likely to recover quickly from the flu with rest and fluids rather than antibiotics? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. A school finds 12 cases of jaundice in a week. List three likely causes and three preventive steps. 3

16. Write the diseases caused by 3
(a) iodine
(b) vitamin D
(c) iron deficiency and the food source to prevent each.

17. Design a three-point health plan for a school hostel to avoid infection. 3

OR

Compare the effects of a vaccine and of a medicine on a person already ill with measles. 3

18. Explain how mosquito-borne diseases can be controlled by an individual, the family and the community. 3

OR

A friend does not eat vegetables or fruit. Name two problems and suggest a solution. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. In a locality, 40 people suffered from typhoid after a marriage feast. Suggest the likely source, how infection spread, and how a repeat can be prevented. 5

OR

Explain the concepts: pathogen, host, vector, symptoms, immunity, vaccine, antibiotic, epidemic using one line each. 5

20. Explain the working of vaccines with a graph-like description of antibody levels after the first and the second dose, and say why boosters are needed. 5

OR

Explain how personal habits, family environment and community conditions together determine health. 5
