THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 10 — SCIENCE · NCERT-TYPE CHAPTER TEST SET 1

Chapter 7: **How do Organisms Reproduce?** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. NCERT-type: questions in the style of the textbook examples and exercises.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Binary fission in Amoeba differs from that in Leishmania because in Leishmania the division occurs 1

(a) in any plane
(b) at a definite plane related to the whip-like flagellum
(c) in the nucleus alone
(d) only after sporulation

2. The male gamete in a flowering plant is formed in the 1

(a) stigma **(b)** ovary **(c)** pollen grain **(d)** ovule

3. Sperms are produced in the 1

(a) urethra **(b)** prostate **(c)** ureter **(d)** testes

4. Multiple fission is seen in 1

(a) Planaria **(b)** Amoeba **(c)** Hydra **(d)** Plasmodium

5. The part of the flower that becomes the fruit is the 1

(a) style **(b)** ovule **(c)** ovary **(d)** stigma

6. The testes lie outside the abdominal cavity in the scrotum because 1

(a) they need more oxygen
(b) they produce urine
(c) they are too large for the abdomen
(d) sperm formation needs a temperature lower than body temperature

7. Hydra reproduces asexually mainly by 1

(a) multiple fission **(b)** budding **(c)** binary fission **(d)** spore formation

8. The ovule develops into a 1

(a) petal **(b)** fruit **(c)** seed **(d)** flower

9. The ova (eggs) are produced in 1

(a) uterus **(b)** vagina **(c)** ovaries **(d)** oviduct

10. Rhizopus reproduces by 1

(a) fragmentation **(b)** binary fission **(c)** spores **(d)** buds

MASTERMIND

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Why is variation useful for a species? 2

12. What is vegetative propagation? Give one example. 2

13. What is the function of the placenta? 2

14. How does binary fission differ from multiple fission? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. Describe the process of budding in Hydra. 3

16. Name the parts of a flower with their functions: 3
(a) anther
(b) stigma
(c) ovary.

17. What changes occur in boys and girls at puberty? Give two for each. 3

OR

Why is DNA copying essential in reproduction? 3

18. Explain the changes that occur in a flower after fertilisation. 3

OR

Explain how the embryo is nourished in the human female. 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. Explain the different modes of asexual reproduction in single organisms with one example each. 5

OR

Describe the human female reproductive system. Where does fertilisation occur and where does the zygote develop? 5

20. Describe binary fission in Amoeba. Why is Leishmania's division different? 5

OR

Explain what happens after fertilisation in humans, up to the birth of the child. 5

END OF QUESTION PAPER — Total: 40 Marks
