THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 10 — SCIENCE · MEDIUM LEVEL CHAPTER TEST SET 2

Chapter 7: **How do Organisms Reproduce?** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Medium level: multi-step questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. Pollen grains of a flower reaching the stigma of another flower on the same plant is 1

(a) vegetative propagation **(b)** fertilisation
(c) self-pollination **(d)** cross-pollination

2. Where do the sperms mix with the secretions of the glands? 1

(a) In the urethra / vas deferens region **(b)** In the uterus lining
(c) In the ovary **(d)** In the placenta

3. The advantage of reproducing by spores that have thick walls is 1

(a) they contain sperms **(b)** they are very large
(c) they survive unfavourable conditions **(d)** they need no water ever

4. The correct order is 1

(a) fruit, fertilisation, pollination
(b) pollination, pollen tube growth, fertilisation, fruit formation
(c) fertilisation, pollination, pollen tube, fruit
(d) pollen tube, pollination, fruit

5. Which hormone is responsible for male secondary sexual characters? 1

(a) Testosterone **(b)** Adrenaline **(c)** Insulin **(d)** Oestrogen

6. A student keeps Rhizopus-covered bread in a dry sunny place and in a damp dark place. Growth is faster in 1

(a) the damp dark place **(b)** the dry sunny place
(c) both equally **(d)** neither

7. Which part of the seed stores food for the embryo in a bean? 1

(a) Plumule **(b)** Radicle **(c)** Seed coat **(d)** Cotyledon

8. Oestrogen is secreted by 1

(a) prostate **(b)** placenta only **(c)** ovaries **(d)** testes

9. A cut piece of a Spirogyra filament is placed in water. It will 1

(a) die at once **(b)** form a flower
(c) grow into a new filament **(d)** turn into spores

10. A seed kept in a dry container does not germinate because 1

(a) it has too much light **(b)** it lacks the plumule
(c) it is a gamete **(d)** it lacks water

SECTION — B (Very Short Answer Type) — 4 × 2 = 8

Answer in about 20–30 words each.

11. Banana plants are grown by vegetative propagation. Give two reasons. 2

12. If the testes were inside the abdomen, what would happen to sperm production? Give the reason. 2

13. Planaria is cut into three pieces. What will be the result? Name the process. 2

14. Why is cross-pollination considered better than self-pollination for the species? 2

SECTION — C (Short Answer Type) — 4 × 3 = 12

Answer in about 40–60 words each.

15. How does the DNA content stay constant in successive generations in sexually reproducing organisms? 3

16. Trace the path of a sperm from the testis up to the place of fertilisation. 3

17. Why does a cut Hydra regrow its body parts while a cut human arm does not? 3

OR

Explain how the pollen tube helps in fertilisation. 3

18. What is implantation? Why is it essential? 3

OR

Why does fertilisation need both pollen and ovule in flowering plants? 3

SECTION — D (Long Answer Type) — 2 × 5 = 10

Answer in about 100–150 words each.

19. Describe with the help of the longitudinal section of a flower its parts and the path of the pollen tube. 5

OR

Compare asexual and sexual reproduction with respect to the number of parents, variation, speed, gametes and examples. 5

20. Describe the events that take place from pollination to formation of the fruit in a flowering plant. 5

OR

Describe fertilisation, implantation and the role of the placenta in humans. 5

END OF QUESTION PAPER — Total: 40 Marks
