THE MASTERMIND COACHING CLASSES

CBSE / RBSE • NURSERY – CLASS XII • JAIPUR

Road No. 5, VKIA, Jaipur — 9887258679

CLASS 10 — SCIENCE · HARD LEVEL CHAPTER TEST SET 3

Chapter 9: **Light - Reflection and Refraction** | RBSE Pattern | Session 2026–27

Time: 1 Hour 30 Minutes Name: _____ Roll No.: _____ **Maximum Marks: 40**

General Instructions:

1. All questions are compulsory.
2. Q. 1–10 are Objective Type (1 mark each).
3. Q. 11–14 are Very Short Answer Type (2 marks each).
4. Q. 15–18 are Short Answer Type (3 marks each).
5. Q. 19–20 are Long Answer Type (5 marks each).
6. Internal choice is given in Q. 17 to 20.
7. Write the question number before each answer.
8. Hard level: application and higher-order questions.

SECTION — A (Objective Type Questions) 10 × 1 = 10

Choose the correct option and write it in your answer book.

1. A magnifying glass of power 10 D is used. Its focal length and the maximum object distance (for a virtual image) are 1

(a) 1 cm; less than 1 cm **(b)** 10 cm; more than 10 cm
(c) 100 cm; less than 100 cm **(d)** 10 cm; less than 10 cm

2. Assertion (A): Concave mirrors are used in solar furnaces. Reason (R): Parallel rays of the Sun converge at the focus after reflection. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

3. A convex lens in air has f = 20 cm. When completely immersed in a liquid of higher n than the lens glass, the lens behaves like 1

(a) a diverging lens **(b)** a plane mirror
(c) a converging lens of f = 40 cm **(d)** no change

4. If a convex lens is cut along its principal axis into two halves, each half has 1

(a) half the focal length **(b)** the same focal length as the original
(c) double the focal length **(d)** zero

5. Assertion (A): A concave mirror always forms a magnified image. Reason (R): A concave mirror has a negative focal length. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

6. The focal length of a convex lens is 1

(a) smaller for violet light than for red light
(b) the same for all colours of light
(c) larger for violet light than for red light
(d) zero for violet light

7. A diverging beam of light from a point source strikes a convex lens placed at distance f from the source. The refracted beam is 1

(a) parallel **(b)** convergent **(c)** scattered **(d)** divergent

8. Assertion (A): The speed of light changes when it goes from air to glass. Reason (R): The frequency of light also changes in glass. 1

(a) Both A and R are true and R is the correct explanation of A.
(b) Both A and R are true but R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

9. Light of a given colour has the same 1

(a) frequency in all media **(b)** wavelength in all media
(c) amplitude in all media **(d)** speed in all media

10. In a mirror, if u = -2f, the magnification is 1

(a) -1 **(b)** +1 **(c)** -2 **(d)** -0.5

SECTION — B (Very Short Answer Type) 4 × 2 = 8

Answer in about 20–30 words each.

11. Two plane mirrors are at right angles. How many images are formed? Give reason. 2

12. A swimming pool of depth 3 m appears shallower. Find the apparent depth for n = 1.33 (nearly). 2

13. Light of frequency 5 x 10^14 Hz travels from air into glass of n = 1.5. Find its speed and the frequency in glass. 2

14. A concave mirror cannot give a diminished virtual image. Explain. 2

SECTION — C (Short Answer Type) 4 × 3 = 12

Answer in about 40–60 words each.

15. A fish is at 1.5 m below the surface of a lake (n = 4/3). Find its apparent depth and explain. 3

16. How will the image formed by a convex lens change if its upper half is covered with a black paper? Explain. 3

17. An object is placed 15 cm in front of a convex lens and 15 cm in front of a concave lens, both of |f| = 15 cm. Compare the images. 3

OR

A concave mirror and a convex lens of the same focal length are used to form images of an object at 2f. Compare the nature, size and the side of the image. 3

18. Calculate the focal length of a lens that forms an erect image three times the size of an object kept 10 cm from it. 3

OR

How can you identify a concave mirror, a convex mirror and a plane mirror by looking at your face from a small distance? 3

SECTION — D (Long Answer Type) 2 × 5 = 10

Answer in about 100–150 words each.

19. A convex lens of power +4 D and a concave lens of power -2 D are in contact. An object is 1 m away. Find the focal length of combination, the image position and magnification. 5

OR

A lens forms a real image of an object that is 10 cm tall. When the object distance is 40 cm the image is 5 cm tall. Find f and the image distance. 5

20. A student draws a table for a convex lens with u = 15, 20, 30, 40, 60 cm and f = 20 cm. Compute v for u = 30 and u = 40 and u = 60 and describe the trend. 5

OR

A concave mirror of radius of curvature 60 cm is used to obtain images of an object 6 cm tall placed at 45 cm and at 20 cm from the mirror. Find the image position, size and nature in each case. 5

END OF QUESTION PAPER Total: 40 Marks
